QUINCY, MASS.

THE WHEEL THAT DON'T BREAK.

Price, $75.00.

PATENTED.

AN AUTOMATIC BICYCLE SEAT

that tilts in perfect harmony with the motion of the leg. It is in two sections, each independent of the other. It is the only seat that doctors say overcomes the defects and dangers of riding, such as chafing, numbness, and entirely relieves the sensitive parts.

Ask your Hardware dealer to show it, or send for particulars to the

Automatic Cycle Seat Co.,
Grand Rapids, Mich.

E. A. WORTHEN,
Burlington, Vt.

HERE IT IS.

The BOSS LANTERN LAMP.

Patented Nov. 27, 1894.

NO wind or hurricane, however strong, can blow it out. Any No. 2 crimped top chimney will fit it. Chimney does not get hot, because the cold air goes down into the chimney around the sides—the hot air comes up through the center of the chimney drawing the flame up several inches, making the light 5 candle power, producing a cold draught under the flame. The candle melts very slowly, making half candle last many hours.

There is a standing offer of **One Hundred Dollars** to any one who can take his Hat, Fan or any thing else and Fan the light out. It is impossible to fan the light out or for the wind to blow it out.

Sample free, prepaid. Write for special prices delivered.

Patent owned and manufactured by

R. GIVENS, - Corpus Christi, Texas.

SUPPOSE

Your "ad." was here! You would read it with the other "ads." and it would be read by twenty thousand other people. Advertising in

"HARDWARE"

is the cheapest, and most profitable, because its contents are brought directly to the notice of the Hardwaremen with nothing else to divert their attention. : : : : :

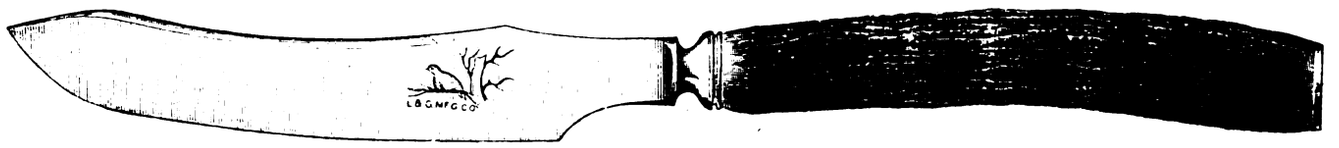
ONE REASON WHY

Our business has grown out of all proportion to any other manufacturer of

CUTLERY IN THE U. S.

Is that while our goods are unsurpassed in finish and general appearance our special aim has been to adapt them to the purpose for which they are to be used.



In the matter of Carvers, your customer wants a Knife to cut with as well as to look at. All our Carver blades are made from carefully tested Butcher Knife Steel. They take and hold a fine cutting edge.

We also make Table Knives, Butcher Knives, Shoe Knives in great variety. All fully Warranted.

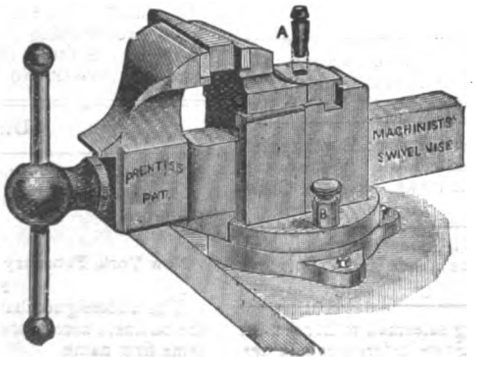
Polar Star Instant Ice Cream Freezer.

A Marvel to all who behold it in operation.
Size, 21x7x7. Retail Price $3.75. Capacity unlimited

It makes perfectly smooth ice cream with all milk. Cream added makes it somewhat richer, but not smoother. It makes very superior, smooth water ices, frozen fruits, frozen custards, sherbets, etc., and is a very simple, convenient and economical freezer.

No Gearing, cogs or fixings to get out of order.

Noiseless in operation. A child can operate it. Makes a plate of ice cream in 30 seconds or a quart in 5 minutes. All other quick freezers merely SCRAPE it off a tin surface of some kind, but do not BEAT IT or WORK IT.



Our Freezer **Mixes, Mashes, Pulls, Grinds and Whips** the cream more in **30 seconds** than any paddle freezer does in **30 minutes.** Dealers will do well to investigate this promptly. Correspondence solicited.

NORTHERN REFRIGERATOR CO.

GRAND RAPIDS, MICH.

The Leonard System of

REFRIGERATION

CONSISTS in discharging partially cooled air into the ice chamber, and is accomplished by making the inner flues of galvanized iron. These are kept cool by the ice and partially cool the ascending air before it enters the ice chamber. The air is then further cooled by passing over the ice and under the false bottom also made of galvanized iron, where all impurities are condensed out of it. Then it passes to the provision chamber, *pure, dry and cold.* There is no other Refrigerator like this one. Be sure you get the

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

SPRING TEMPERED RULES.

In 1882 L. S. Starrett began the manufacture of light, thin spring tempered steel rules.

They at once became very popular among machinists and mechanics generally, taking the lead which they now retain.

The thick, soft rules made by our competitors took a back seat, and our rivals have been forced to adopt, as near as they are able, our improved processes.

There is no need of a diagram to explain the "moral" of this. We have not been asleep.

OUR 86 PAGE BOOK OF FINE MECHANICAL TOOLS AND CUTTERS UP TO DATE IS FREE TO ANYONE WHO ASKS FOR IT. IT IS WORTH ASKING FOR.

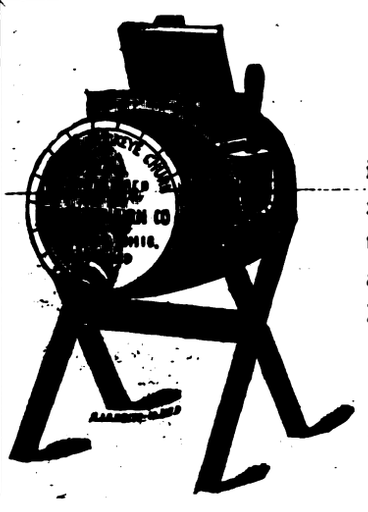
HERE IT IS.

The BOSS LANTERN LAMP.

Patented Nov. 27, 1894.

NO wind or hurricane, however strong, can blow it out. Any No. 2 crimped top chimney will fit it. Chimney does not get hot, because the cold air goes down into the chimney around the sides—the hot air comes up through the center of the chimney drawing the flame up several inches, making the light 5 candle power, producing a cold draught under the flame. The candle melts very slowly, making half candle last many hours.



There is a standing offer of **One Hundred Dollars** to any one who can take his Hat, Fan or any thing else and Fan the light out. It is impossible to fan the light out or for the wind to blow it out.

Sample free, prepaid. Write for special prices delivered.

Patent owned and manufactured by

R. GIVENS, - Corpus Christi, Texas.

THE BUCKEYE CHURN

is the best and easiest Churn on the market to work; churns by concussion, the only principle for granular butter, open air vent, allowing escape of gas and ventilation without stopping to pull a cork.

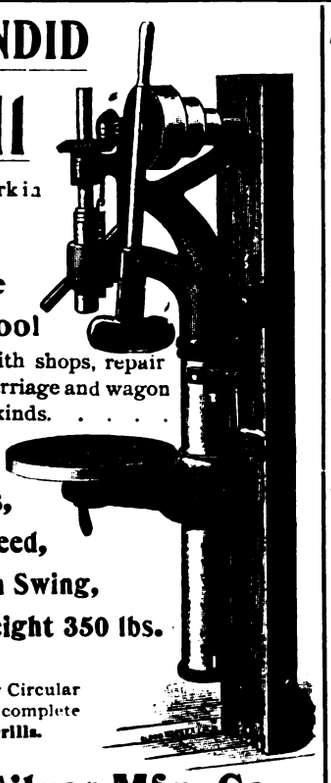
The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE **GREATEST ILLUMINATION.**



THE

AMERICAN WICK

Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light **DROPS.**

Digitized by Google

Do You Desire

an article that every family would buy if they simply had their attention called to its merits? If you do, put in a stock of P & A's Banner Oil Stoves. See Cut.

No. 971, Heater Complete. Height, 27 inches.

Banner Oil Heater

SIMPLE, NOVEL and PRACTICAL.

Requires less care than the ordinary Lamp.

Will burn 8 to 10 hours and heat comfortably a room 15 to 20 feet square.

NO SMOKE! NO ODOR!

PERFECT COMBUSTION.

POINTS:

The Oil Fount is brass, handsomely embossed and highly nickeled. It holds one gallon of oil. As each fount is tested under steam pressure before leaving factory, there is no danger of leaking.

No Chimney. The drum of the **BANNER** in its construction acts as a chimney, saving the expense incident to the renewal of glass chimneys of other makes.

The Fount Frame is artistically made of wrought iron, making a solid base for the stove.

The Burner is the best made, and ONLY ONE with feeder wick, allowing all the oil to be consumed.

The Indicator shows at all times how much oil there is in fount.

The Flame is regulated with our ratchet wick movement, which allows the wick to be raised or lowered with nicety and exactness.

Lighting. It is not necessary to remove any part of the stove to light it. The sliding door in the drum is made for this purpose.

Draft. The round openings in the drum create great suction of cold air in addition to the regular draft. Double the radiating force of the ordinary stove is thus secured.

Get one for your Bed, Bath or Smoking Room, Library, Nursery, Office or Conservatory.

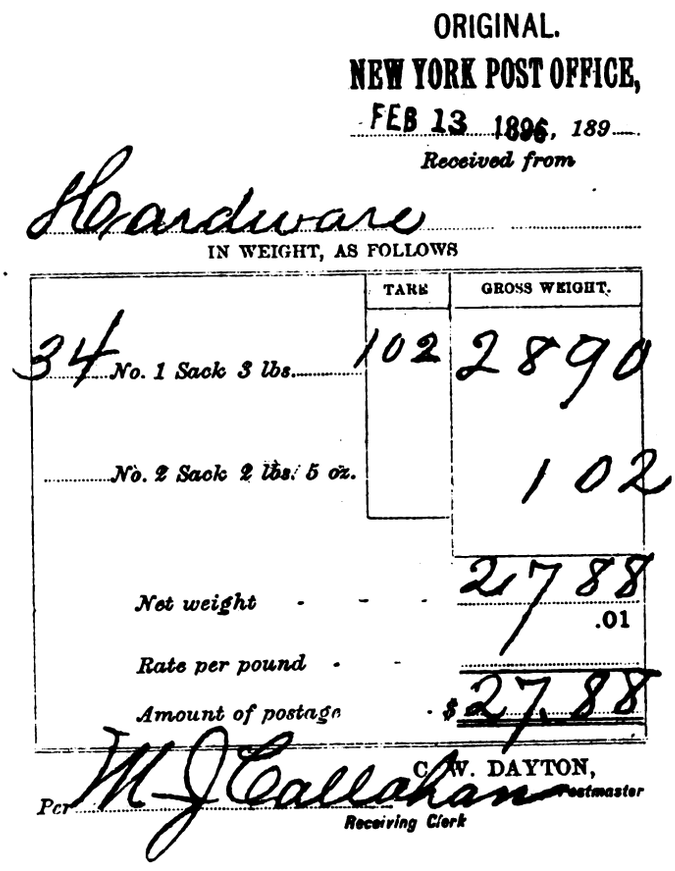
WE GUARANTEE THAT THE CIRCULATION OF
"HARDWARE" DURING 1896 WILL EXCEED

ONE HUNDRED AND TWENTY THOUSAND

AND THE SAME WILL BE PROVEN BY THE
PUBLICATION ON THIS PAGE, IN EACH ISSUE,
OF THE POST OFFICE RECEIPTS FOR COPIES
MAILED THE PRECEDING ISSUE.



A correspondent elsewhere suggests a very happy and philosophical solution of all business difficulties. He believes that affairs will revive if people will say to themselves that confidence is restored; and that in thus saying, it will be restored. In other words, to borrow a telling phrase from the past, "the way to resume is to resume." The history of the world shows that there is a great deal of wisdom in this suggestion. Faith in each other, and in the resources of the country, will count for a great deal just now.

The Hardwareman who does not at least once in each year, sit down at a dinner like that of Thursday night last, does not fully know how much there is in life to live for.

America is getting ready to supply the munitions of war to the whole world. The recent combination means a new hold on the foreign gun and ammunition markets.

"Hardware's" Circulation February 10th.

The following shows the output of *Hardwares* for February 10, 1896:

ORIGINAL.

NEW YORK POST OFFICE,

FEB 13 1896, 189...

Received from

Hardware

IN WEIGHT, AS FOLLOWS

	TARE	GROSS WEIGHT.
34 No. 1 Sack 3 lbs.	102	2890
No. 2 Sack 2 lbs. 5 oz.		102
Net weight		2788
Rate per pound		.01
Amount of postage		$27.88

C. W. DAYTON, Postmaster

Per M. J. Callahan Receiving Clerk

There were mailed, therefore, at the New York post-office, 2788 pounds of *Hardwares*.

2788 × 16 = 44,508
44,508 ÷ 9½ = 4685
4685 + 692 = 5377

The 2788 pounds reduced to ounces, and divided by the weight of one copy, gives a total of 4685 *Hardwares*. Add to this 629 copies delivered by carrier, held for office use, and prepaid by stamps, and we have a total of 5377 as our issue for February 10, 1896.

All real, *bona fide* trade journals will rejoice at the growing custom among advertisers, of carefully scrutinizing the circulation claims that so many would-be journals are putting forth, with a lavish disregard of details, and a careful suppression of figures. A journal that honestly proves a *bona fide* circulation of five hundred, has more claim to recognition than one that shouts that it has five times that much—and takes it out in shouting.

Figures like those found in the table above furnish a bed-rock of confidence upon which an advertiser can rest. They show just how many copies of a journal were printed on a certain date, and where those copies went.

Digitized by Google

There is no airy generalization about them, that leaves the would-be advertiser in doubt as to what he is getting; the word of "Uncle Sam" is back of them—and when that word comes in the shape recorded above, it can be depended upon.

Ohio Hardware Association.

The annual meeting of the Ohio Hardware Association was held at Dayton, Ohio, on Wednesday, Feb. 12th. The business session was of unusual interest, and the subjects discussed were disposed of with satisfactory results, which will prove of benefit to retail trade of the State. The subjects we e:

"The proper relations between Manufacturers, Jobbers and Retailers." "Local Associations."

A great number of communications from all parts of the State were read, which proved without a doubt that the Association was appreciated, and its principles indorsed by the retailers of the State.

The following officers were chosen for the year 1896: President, J. P. Duffy, Greenville, O.; Vice-President, M. B. Talmage, Mt. Gilead, O.; Secretary and Treasurer, J. F. Baker, Dayton, O.; Members of the Executive Committee, E. F. Stone, Urbana, O.; Theodore Butler, Akron, O.

The next meeting will be held on the last Wednesday of February, 1897. The Executive Committee were empowered to take up grievances of the members, to investigate them, and requested to notify the members, through the secretary, if satisfactory adjustment of the grievance could not be made. A button-hole badge was adapted for the members of the Association. An application blank will be mailed to those who are not members of the Association. A resolution was adopted endorsing the action of all the manufacturers and jobbers who have abandoned the custom of charging for package and cartage, heretofore prevailing. A motion prevailed to urge upon the manufacturers the importance of changing the nail card, by making 2d nails the base size.

The social features of the evening were most enjoyable. For the banquet following the business session a very neat menu had been prepared. The tables were decorated with the choicest flowers, and the retiring president, T. J. Morris, of the W. K. Boone Co., Lima, O., proved to be a most experienced and eloquent toast-master. The first Toast "Reminiscences of the Hardware Trade," was responded to by ex-Lieutenant Governor W. V. Marquis, president of the Marquis Hardware Co., Bellefontaine, O., whose masterly command of language and vast experience through a long busy business and public career found expression in words which will never be forgotten by those present. The second toast was "Our Association," responded to by John F. Baker, of Dayton, O., the newly-elected secretary. His genial ways and his treasure of stories, came at once to the front, and brought his audience into that happy frame of mind, which only the wit and magnetism of a genial after-dinner speech can produce. "Hardwareman's Influence upon the Development of the Country," was responded to by Thos. H. Jones, of the W. K. Boone Co., Lima, O. This was a fine effort of a Hardwareman, who notwithstanding the long and weary life spent in the Hardware business, has kept his heart free and his soul open to the higher impulses of life. R. B. Durain, the genial representative of Lowe Bros., manufacturers of paints, of Dayton, O., who entertained the visiting Hardwaremen while in Dayton, in the most lavish manner at the magnificent club house of Dayton, then spoke for the "Travelling Man," whose path is full of thorns, and who deserves the Hardwareman's most considerate treatment. Mr. Durain endeared himself to every member of the Association while in the "Gem City," and the Lowe Bros. were given a vote of thanks for their liberal entertainment of the members.

Impromptu remarks of other members followed, among which the remarks of J. P. Duffy, the new president, were of special interest, and at a very late hour the happy visitors separated.

An electric car had been provided for by the Dayton members of the Association the next morning, which took the members to the Soldiers' Home, and all over the city, also to the National Cash Register Co. The officers of the National Cash Register Co. then took charge of the delegation, showing them through their mammoth factory, after which a fine lunch was provided by them. Their kindness will never be forgotten by the members. As Theodore Butler, late secretary, well said: "The friendships formed, the information gained, the rest enjoyed, the good work of the Association strengthened, what more could we ask for as a result of a day's cessation of daily business cares—new friends, new impulses, a broader field, a longer life. Hurrah for Dayton!"

Marten Doscher to the Trade.

Marten Doscher, under date of February 1, 1896, and Saugatuck, Conn., makes the following announcement: "To the Trade: Having discontinued my New York office, I respectfully solicit orders for the goods I manufacture, through my agents, Messrs. Underhill, Clinch & Co., No. 94 Chambers Street, New York, who will carry in stock a full line of regular goods. Their prices will be the same as at the factory. Orders for goods not carried in their stock will be sent to the factory for execution and will be filled with the least possible delay. I would be pleased to estimate on special turnings in any kind of wood."

The lines made by the Saugatuck Mallet & Handle Works comprise caulking, stone cutter, carpenter, carver, boiler maker, gavel mallets; hawsing beetles, fids, ring mauls, cooper drivers, plumber dressers, turn pins, drift plugs, police clubs, oyster blocks, cobble and Belgium stone rammers, leather head chisel handles, extra grades of all kinds of handles, and hand made bench and moulding planes.

Their New Wheelbarrows.

The Bryan Mfg. Co., Bryan, O., have issued a striking and attractive sheet, containing a price list of their well known Champion Wheelbarrows, and filled with illustrated descriptions of the same. Especial attention is paid to their new Champion No, 77, made from one solid sheet of No. 20 steel, without cut or rivet, and their Champion No. 36, made for mortar, cement, ashes, coal, or the barn, and with tray made of No. 16 steel. It is explained that these are especially appreciated by the trade, and "meet with large sales wherever shown." They add that their Nos. 10, 11 and 20 are going into every state of the Union, and are being exported in large quantities, their folding features making them very easy to handle. A great many other wheelbarrows are also shown in their leaflet, which will be sent on application.

The Stollberg & Clapp Hardware Co., Toledo, Ohio, gave a complimentary banquet to some forty of their employes some evenings since. The party, after partaking of the good things to eat and drink, resolved itself into a social session, during which many apt speeches were made. This is an indication that labor and capital work well in double harness in this prosperous establishment.

The annual meeting of the American Screw Co., was held some days since, at Providence, R. I. The old board of officers were re-elected, with the exception that James Tillinghast was made a director to fill the vacancy caused by the death of Bailey W. Evans.

Michigan Hardware Association.

The first semi-annual meeting of the Michigan Hardwaremen Association was held in Saginaw, Mich., on February 12th and 13th, the Bancroft House being the headquarters of the association. The meetings were well attended, the following firms and others being represented: Abel Phillips & Co., Allegan; Richards Bros., Au Sable; Chas. F. Bock & Son, Battle Creek; L. B. Brockett & Son, Battle Creek; Wattles & Robinson, Battle Creek; McDonnell Hardware Co., Bay City: the Jennison Hardware Co., Bay City; Rechlin & Frank, Bay City; F. C. Goddeyne, Bay City; W. C. Grisdale & Co., Bay City; Martin & Cheever, Bay City; Miller Hardware Co., Bay City; T. Frank Ireland, Belding; the Carlton Hardware Co., Calumet; H. C. French, Cassopolis; Munger & Jennings, Charlotte; Chas. E. Whitaker, Chelsea; Jeffers Bros., 1470 Woodward Ave., Detroit: Henry C. Weber & Co., Detroit; A. Lemke, 815 St. Aubin Ave., Detroit; Chas. A. Strelinger & Co., Detroit; Casper Gnau & Co., 185 Gratiot Ave., Detroit; Pettit, Minnie & Co., Eaton Rapids; E. F. Knapp, Eaton Rapids; E. Olson, Escanaba; W. W. Oliver, Escanaba; Foster, Stevens & Co,, Grand Rapids: Kanters Bros., Holland; H. B. Webber, Ionia; O. H. Heath & Son, Ithaca; the John W. Jochim Co., Ltd,, Ishpeming; Barnard, Smith & Co., Jackson; Henrick & Conestock, Jackson; Leeser & Lehr, Jackson; the Edwards & Chamberlin Co., Kalamazoo; Joseph Pierce, Lake Linden; W. T. Hebbard, Lansing; R. R. Williams, L'Anse; the Burgan Hardware Co., Lawrien; Zimmerman Bros., Marine City; Scott Bros. & De Lisle, Marine City; Manhard Joplin Co., Ltd., Marquette; Menominee Hardware Co., Menominee; J. H. Whitney, Merrill; M. R. Manhard & Co., Newberry; Burton Nye, New Haven; Price & Smith, North Lansing: S. L. Boyce & Son, Port Huron; J. B. Sperry, Port Huron; Morley Bros., Saginaw; Popp & Wolf, Saginaw; Saginaw Hardware Co., Saginaw; Wood & Thonen, Sault Ste. Marie; Ferguson Hardware Co.. Sault Ste. Marie; P. M. Church & Co., Sault Ste. Marie; G. T. Gready, South Lyons; McDonald Bros., South Lake Linden; McArthur Bros. & Co., St. Ignace; H. P. Everett, Stockbridge; A. R. Barrett, Union City; George L. Mosher, West Bay City; Mohr & Staudacher, West Bay City; G.W. Bloodgood, Wyandotte; Buhl Sons & Co., Detroit; Fletcher Hardware Co., Detroit; Freeman, Delamater & Co., Detroit; Standart Bros., Detroit; R. C. Bialy, Bay City; M. Kinney, Bay City; South Bay City Hardware Co., Bay City; H. W. Webber, West Bay City; E. Jochen, Saginaw; Solms Bros., Saginaw; J. C. Smith, Saginaw; Geo. Walz & Co., Saginaw; Harry Shook, Pinconning.

The programme arranged for the meeting was as follows:

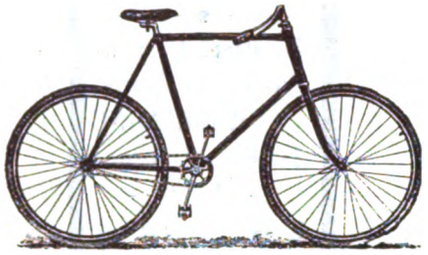
Wednesday, Feb. 12. Afternoon session—2 o'clock.—1. Roll call. 2. Selecting committee on credentials. 3. Recess of 30 minutes. 4. Reading of minutes. 5. President's address. 6. Report of the secretary and treasurer. 7. Adjournment. Evening session—7.30 o'clock.—1. Paper—"The Best Method of Creating and Maintaining Harmony Between Local Dealers"—Mr. Henry C. Weber, Detroit. 2. Discussion.

Thursday, Feb. 13. Morning session, 9 o'clock.—Paper, "Present methods of making net profits now, as compared to 20 years ago"—Mr. Mr. T. A. Harvey, Saginaw; discussion; paper—"How to overcome competition in the sale of inferior goods by irresponsible dealers"—Mr. T. Frank Ireland, Belding; discussion. Afternoon session, 2 o'clock—Paper, "The retailer, the jobber and the traveling man," Mr. Edward A. Moye, Marquette; paper, "The traveling man's view of it," Mr. Albion F. Wixon, Marquette. Discussion.

On Thursday evening a complimentary banquet was tendered to the association by Morley Bros., at the East Saginaw Club, nearly 200 guests being present. The tables were tastefully decorated with palms and flowers. A steel rule souvenir menu was given with the compliments of the Lufkin Rule Co., a facsimile of which we reproduce:

T. A. Harvey acted as toastmaster. The first speaker, J. H. Whitney, responded to the toast of "Legislation and Legislators." He was followed by Sydney F. Stevens, on "Friendly Relations." J. M. Thurber responded to "Credits." Frederick Buck, of the Lufkin Rule Co., spoke on "Golden and Other Rules." John Freeman responded briefly to the toast of "Road Experiences." H. W. Webber and H. C. Weber also spoke.

The Hardware Club.



The following gentlemen have been unanimously elected members of the New York Hardware Club since our last report:

Carson C. Peck, No. 280 Broadway.
Wm. B. Paulscraft, No. 107 Chambers Street.
Christopher Richardson, Newark, N. J.
Vincent P. Travers, No. 107 Duane Street.
John M. Borbes, No. 287 Broadway.
C. W. A. Hammacher, No. 267 West Broadway.
Henry B. Speed, Chicago, Ill.
F. C. Wood, St. Louis, Mo.
Geo. B. Jones, No. 15 Warren Street.
Maybury Fleming, No. 203 Broadway.
Joseph McKee, No. 175 Grand Street.
Charles M. Sprague, No. 253 Broadway.
John Carnrick, No. 426 South Fifth Avenue.
George P. Rowell, No. 10 Spruce Street.
Noah C. Rogers, No. 111 Broadway.

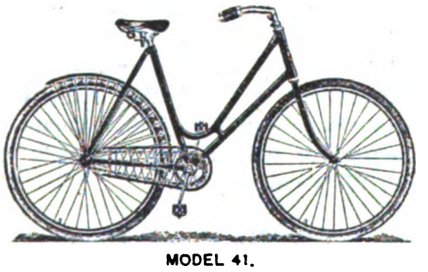
Monarch Models for 1896.



The illustrations given here represent two of the models offered by the Monarch Cycle Mfg. Co. for the season of 1896. The wheels are described as follows: "Model 20—Monarch 24-inch Diamond Frame. Mannesmann inch tubing for main top, seat mast and main lower tubes, with ⅝-inch tubes for rear forks and stays. 10-inch head, with 1¼-inch tubing. 28-inch wheels. Detachable sprockets, front and rear. Plymouth rims. Humber pattern chain. Monarch patented crank shaft bearings. Detachable, round, tapered cranks, 6½-inch throw. Width of tread, 5¾ inches. Tubular L seat post, with solid steel top bar. Cold swaged, double butted steel tangent spokes, tied, with 28 to front and 32 to rear wheel. Monarch rat-trap pedals. Garford T saddle. 66½-inch gear. Monarch drop handle bars 13-16-inch. Cork handles, and black tips. New York

MODEL 20.

1⅝-inch tires. Weight, 22 pounds. Black tool bag, with pump, wrench, screwdriver, oil can and repair kit. Finish black enamel, with nickeled parts and spokes. Options.—No. 77 Hartford single tube, or M. & W. quick repair tires. Monarch rubber pedals. Hunt saddle. Gear 68 or 72. Weight, 22 pounds. Price, $80."

"Model 41—Monarch 22-inch double-drop frame. Seat mast, upper and lower drop main tubing, 1⅛-inch Mannesmann, with rear stays and forks ¾-inch. Head, 10-inch ball bearing with 1¼-inch tubing. 28-inch wheels. Detachable sprocket wheels, front and rear. Barrel hubs. Built up wood rims, fitted with nickel-plated eyelets in spoke holes and finished in mahogany. Humber pattern chain. Monarch patent crank shaft bearings. Detachable, round, tapered cranks, 6-inch throw. Width of tread, 5⅛ inches. L seat post. Cold swaged double-butted steel tangent spokes, tied, with 32 to front and 36 rear. Brandenburg rubber pedals. Hunt spring handle. 62-inch

MODEL 41.

gear. Monarch raised handle bar, 13-16-inch. Cork handles and white tips. M. & W. 1⅝-inch quick repair tires. Weight, 22 pounds. Black tool bag, with pump, wrench, screwdriver, oil can and repair kit. Finish, Brewster green enamel, handsomely striped with nickel parts and spokes. Options.—New York, Palmer, Dunlop, No. 80 Hartford single tube tires. Monarch rubber pedals. Garford saddle. Weight, 22 pounds. Price, $100."

A Big Bicycle Business.

The Acme Bicycle Mfg. Co., Reading, Pa., have purchased a large piece of land, and will at once begin the erection of one of the largest bicycle factories in the country. The property covers an entire block, and entrance can be obtained from any of the four sides. The price paid was $28,000. For some time the present quarters of the company have been too small, even in the face of the fact that for a long time the plant has been running twenty-four hours every day. The force of employes has been increased from time to time until at present 200 men are on the pay roll. The present output is from 75 to 100 "Stormer" machines every day. Plans have been prepared for two buildings, each 190 by 40 feet. In addition to this there will be a third building 40 by 100 feet, connecting the two main entrances. Each of them will be four stories in height, in addition to a basement. The cost of the new plant will exceed $150,000. Work will be pushed and it is the intention of the company to get into the new headquarters by July 1, if possible. All the structures will be of brick. Two railroad sidings will run into the buildings, which will give perfect shipping facilities. The company was organized and went into business in 1893 and has been very successful. So far it has turned out over 25,000 machines, which have always found a ready sale.

Their New Officers.

The members of the New England Hardware Dealers' Association met at the United States Hotel, Boston, Mass., some evenings since and enjoyed their annual banquet, presided over by president H. G. Janvrin. After the dinner informal remarks on trade subjects were made. During the evening balloting was had for new officers for the ensuing year, with the following result: President, D. Fletcher Barber, Boston; first vice president, Edward A. Loomis, Providence, R. I.; second vice president, George W. Burditt, Cambridgeport; third vice president, Austin Whitcomb, Beverly; secretary, James A. Farless, Boston; treasurer, James L. Work, Boston; directors, Fred. W. Kidd, Lawrence; William N. Irving, Boston; James A. Cook, South Boston; J. H. Sayward, Haverhill; W. E. Cutler, Boston, and Alfred D. Wolf, New Bedford.

Working at the Rays.

Among the most important investigations which are being conducted with a view of determining the value of the Roentgen rays, are those made by Chas. M. Scribner, of the Western Electric Co., in their laboratory at Chicago. "I am particularly interested," said Mr. Scribner to the representative of *Hardware*, "in ascertaining the worth of the process considered from an industrial standpoint. If I can be able to say to my company: 'this shaft has a flaw in it,' or 'the composition of that metal is imperfect,' my work will be of a value scarcely to be estimated. This will, I believe, soon be determined. Every day some new development is recorded. The first plate I made was so inferior to those sent me from Germany that I concluded the German photographs had been retouched. After three days, however, I had made as good photographs as any of those imported."

Jno. W. Bell & Co., Mercer, Pa., have just issued a new circular and price list of the Bell Eave Trough Hanger. This Hanger has been in the market for the past ten years, and has proved a favorite not only with the tinner, but with the jobber as well. It is made of one piece of heavy steel wire, galvanized, and is strong and durable, and it is claimed a trough can be hung by its use, in less time, and without the aid of a helper, than with the others. The sharp, stiff point of the roof-piece, it is claimed, can be utilized for holding the trough in place temporaily, while it is being hung and adjusted permanently. The Hangers are sold to the tinners chiefly through the jobbing trade. A cut of the Hanger is shown in the firm's advertisement in this issue, and they offer to mail a sample of any desired size, free on application.

The records of the Patent Office show that during the last quarter of a century 2388 styles of velocipedes have been patented.

How To Use Plumbago Crucibles.

The following valuable information for all who use plumbago crucibles is from the pen of John A. Walker, vice-president of the Joseph Dixon Crucible Co., Jersey City, N. J., who is certainly competent to speak with authority upon that theme:

I have in a previous article called attention to two good points in the use of crucibles, and in the way of a preface will here briefly recapitulate. The first is a proper annealing, about which the Dixon Co. advises as follows: Every Dixon crucible is annealed before leaving our works. All dry crucibles, however, are liable to absorb moisture in going from our shop to yours. On arrival at your works they should be immediately unpacked and stored in a warm, dry place to dry out any moisture possibly absorbed in transit, and to keep them from taking up further dampness. Then to provide against possible accident it is wise to re-anneal.

Before being placed in a hot furnace the temperature of a crucible should in every instance, in the re-annealing, be slowly raised to at least 212 degrees Fahrenheit, or even a little above the temperature of boiling water. This will remove all moisture. Any time a press of work compels you to use our crucibles immediately on arrival, and without the re-annealing up to 212 degrees Fahrenheit, if they scalp or flake off on the first heat the fault is not in the crucible. We cannot be held accountable for such accidents, if our instructions are not observed. An additional word is, if the crucible be a large one, after toasting its outside walls, set it over a black, slow fire, bottom side up, that the inside walls as well as the outside can feel the good of the toasting process.

The remaining point before noticed is that the melter shall keep in stock new crucibles—those not before in the fire at all, and also partly used ones—those that have gone sundry heats and have received the vitreous glaze which comes after several heats. Then for his new and slow fires put in the brand-new crucibles, and heat them up gradually, but for the hottest fires always put a crucible in that is coated with the glaze. The careful observance of these two hints will obviate most of the cracks and scalps which otherwise might take place on the first or second heat. A crucible having now got safely thus far, its future good behavior depends—

1st. On the fit of the tongs. In a fire hot enough to melt brass, or copper, the crucible becomes soft and pliable. In lifting it out to pour, if the tongs do not fit, or are not made to grip the crucible at the right place, it is easily squeezed out of shape and liable to crack. The Dixon Co. suggests that the tongs be made to grip the crucible just below the bilge, so it will not need such a tight squeeze. Some melters use tongs shaped like the ace of spades; such tongs remove the coal much more easily than those of the regulation shape.

2d. On the kind of coal used for fuel. Coal with too much sulphur destroys, unnecessarily, the life of the melting-pot. I have seen a car load of crucibles give 25 per cent. more heat by a change of coal.

3d. The melter must not expect as many heats in melting one metal as another. From three heats when melting nickel, to six in melting steel, to twenty-four in melting copper, the heats run up in the forties when melting composition.

4th. The drafts and dampers, if arranged to produce a reducing atmosphere, as against an oxidizing atmosphere, will lengthen the life of the melting-pot. An oxidizing flame is always unfriendly to a plumbago crucible.

5th. The flux used also bears on the same result. The binding materials in the walls of the crucible are impervious to some fluxes and easy victims to others.

6th. The time of heat is also to be allowed for. If with modern furnaces, high drafts, and taller stacks, the heat is taken off in 1½ to 1¾ hours, don't expect your crucible to stand this large punishment as easy as the lighter strain of a 2½ to a 4 hours' heat.

7th. If in ordering your crucibles you could give a hint to the maker as to what metal is to be melted, he could tell better what crucibles to send.

In the old days a crucible was a crucible; in these modern days we make by twenty different formulas, or mixtures as they are called. So tell your maker what you propose to melt, and you will get a crucible better adapted to the work and one that will last longer.

8th. After pouring your metal, don't roll the pot out of doors where it will get rained upon, or on a bed of wet sand, or where it will absorb moisture. If you do, you put it exactly where in its hot, soft condition, it will become spoiled either teetotally or partially. Also in lifting large pots by the crane, don't release the grip and let them drop four or five feet on stone floor; rather hold the grip until within two or three inches from the ground, and then drop them if possible on a bed of old dry sand.

9th. Don't leave any metal to cool in the crucible, but pour until the melting pot is clean empty. In the parlance of the shop, don't leave the crucible so you will find a "button" in the bottom when it is cooled off.

In cooling, each button will have small threads or spikes of metal which will attach themselves to the soft crucible walls and get solidly stuck in them, and they tear the walls of the pot to get them out.

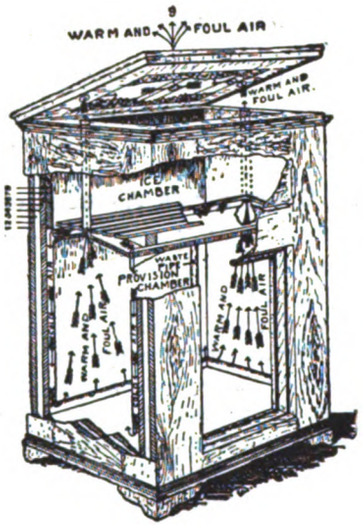
10th. In charging the crucible, don't wedge the scrap in too tightly; expansion and contraction go on in the heating and cooling, and a careful charging will provide for this.

The Sportsmen's Association.

At a meeting of the board of trustees of the Sportsmen's Association the report of the Exposition Committee showed a most encouraging state of things for the coming exposition, the amount of rentals for space assured at this time exceeding the entire amount for spaces taken in at the First Annual Sportsmen's Exposition held last May. The committee's report showed that there were now but thirty odd spaces remaining untaken, and that there were applications in for more than half of these.

The annual meeting of the Association was held after the adjournment of the trustees' meeting. The reading of annual reports of the various officers was waived, and the election of the board of trustees for the year 1896 resulted as follows: P. G. Sanford, J. A. H. Dressel, Charles Tatham, Justus Von Lengerke, Charles Daly, Frank W. Sanger, Harry C. Palmer, Charles H. Luscomb and Alfred Chasseaud. The election of officers resulted as follows: President, Charles Tatham; first vice president, Charles Daly; second vice president, Justus Von Lengerke; treasurer, J. A. H. Dressel; secretary, Harry C. Palmer. The following gentlemen were appointed as an executive committee: Charles Tatham, Charles Dalay, Justus Von Lengerke, J. A. H. Dressel, Charles H. Luscomb. Messrs. Dressel, Von Lengerke and Luscomb were appointed by the chair as a committee to undertake the revision of the constitution and by-laws, and report at an early meeting of the board of trustees.

A number of new members were admitted to the Association, among them being E. Detmold, of Von Lengerke & Detmold; Charles H. Luscomb, ex-president L. A. W., and Mr. Whittlesey, of the Overman Wheel Co.



The Berlin Iron Bridge Co., East Berlin, Conn., have just completed for the Silver Springs Dyeing & Bleaching Co., Providence, R. I., three buildings, made with steel frames and corrugated steel coverings; an engine house, a box shop and a boiler room. The Berlin Co. have also lately completed a fireproof boiler room for the Passaic Print Works, at Passaic, N. J.

Read's "Odorless" Refrigerators.

An examination of a little book that is being sent to the trade by the Keyser Mfg. Co., Chattanooga, Tenn., leads to the conclusion that Read's "Odorless" Refrigerator not only keeps provisions cool, but also so warms up the user that he sits down and writes a fervid endorsement. A half dozen pages of the book are filled with strong endorsements, born of personal experience, and ranging in the locality of the writers from Victoria, Tex., to Brooklyn, N. Y., and from Macon, Ga., to Mansfield, Ohio.

A sectional view of this later claimant to honors is here shown. It is described by the makers as emphatically an odorless refrigerator, in which one "can put onions, bananas and all kinds of vegetables, fruits, meats, fish, cheese or anything that has an odor, together with milk and butter, leaving the two latter in open vessels, without contamination. It consumes less ice than other refrigerators, and needs no washing out." In further statement of their claims, the company say: "No contamination by reason of foul odors. A great saving of ice, because the warm air that is admitted in opening door of provision chamber does not reach the ice. Does not need to be scalded out to rid it of foul odors, as they all pass out by our system, thus saving labor and worry. Our aim is not to make a low-priced refrigerator, with which the market

is already flooded, but one that will do the work and stand the wear and tear of time. We put in more material than other makes, as we can prove by the weight of our refrigerators, and with our patent system, it costs more to put together, and therefore we have to charge a little more, but we give you your money's worth. Although this is a new article on the market, yet we have already placed them in twenty-two States, and have abundance of evidence from some of the best people in the land, that have given them a square and fair trial, that these refrigerators will do all that we claim."

The following is given in description of the sectional cut here shown: "This is a sectional view showing the mode of operation of our refrigerators. Ice being placed in the upper chamber, the cold air passes down cold air flues and goes into the provision chamber near the bottom, getting under all warm air and odors and forcing them up into the roof of provision chamber, to each end of which pipes are attached, and the warm air and odors pass up through these pipes (and not back over the ice as in all others), to an opening in the lid, where they pass through an air chamber between the outside and inside cases of the lid, and then pass out into the open air at No. 9, thus avoiding all collision of cold and warm air currents so hurtful to the preservation of food. The roof of the provision chamber is absolutely air tight from the ice chamber, so that in opening the door of the provision chamber no warm air can come in contact with the ice. Such warm air as is admitted when door is opened, goes up warm air pipes and out at No. 9." Construction: 1, Outside case; 2, water and acid proof paper lining; 3, dead air space; 4, water and acid proof paper lining; 5, inside case; 6, water and acid proof paper lining; 7, wall to protect air flues; 8, galvanized steel lining; 9, escape for warm air and odors. The arrows indicate the circulation of air.

A copy of the little book above referred to, with other information as to prices, etc., can be obtained by application to the Keyser Mfg. Co., Chattanooga, Tenn.

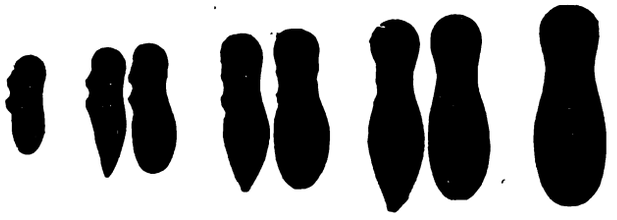
They Celebrated Their Sales.

An interesting occasion is thus described in a recent issue of the Nashville, Tenn., *American:* There was a most pleasant gathering at the Utopia last night, when between thirty and forty employes of the Gray-Dudley Hardware Co. sat in an upper room and dined in honor of a remarkable record made by that firm during the month of January. Just before the end of the year John M. Gray, Sr., promised the employes that if the sales of the month should aggregate $100,000, and the goods should all be actually shipped out of the house, he would give them an oyster supper. The sales passed that figure by a very comfortable margin, and last night the supper was forthcoming. Mr. Gray himself has retired from active business, though retaining a large stock interest in the firm, and during his busy life has earned the reputation he now enjoys so well. He believed the business outlook was promising, and when others thought him too sanguine, he made this offer. There were only about thirty-six of the employees present, but three of the traveling men being on hand, but the office force enjoyed the occasion. Judge J. W. Black was master of ceremonies, and by way of inaugurating the evening's pleasures he made a speech that was roundly applauded. Between the courses there were a number of short talks, though all disclaimed being orators, in which Messrs. John Dale, Will Pollard, W. F. Stephenson, J. W. Black and others participated. A hearty vote of thanks was given Mr. Gray for the entertainment, and three cheers were given for him, for Mr. Jenkins and for Mr. Stephens. Judge Black was the most elegant of toast masters, and Mr. Dale's tribute to water, which constituted the beverage of the evening, will be long remembered. The party broke up about midnight, and most of the boys missed the last car home.

The January sales far exceeded the January, 1895, sales of both the houses, which have since consolidated into the Gray-Dudley Hardware Company.

The Kruse "Kross Klevis."

An attachment which is attracting the attention of implement and Hardware dealers on the lookout for specialties to increase their trade, is the Kruse "Kross Klevis," made by the Kruse Kross Klevis Co., Higginsville, Mo. It is described as "of the best quality of malleable iron, and adjustable to fit any plow from an eight to an eighteen-inch." Handling this Clevis means only one kind to keep in stock, as it can be used to repair broken parts of others. The price is low, and a liberal discount is made to the trade. Write to the manufacturers, the Kruse Kross Klevis Co., Higginsville, Mo., for prices, terms, etc.



The Brooklyn Glass and Manufacturing Co., has been incorporated by John C. Baker, of Great Neck, Wm. Clark Roe, of Thomaston, and George W. Green, of Brooklyn, to manufacture lamps, cutlery, earthenware, pottery, household furnishings, etc. Capital stock $15,000.

The latest thing in glass is a factory in Liverpool, Eng., built of glass bricks, with chimney, floors and shingles of the same material.

The Enterprise Cobblers' Kits.

While there are innumerable kinds and styles of shoe stands and lasts on the market, the Enterprise Mfg. Co., of Pa., Third and Dauphin Streets, Philadelphia, Pa., have lately introduced a new device which they style a "Cobblers' Kit," and which they feel sure to meet all possible requirements. This most important improvement is in the lasts, of which there are eight sizes or styles, and as shown

in the illustration, they can be readily adjusted to any desired angle. The lap iron enables the operator, by the use of the different lengths of lap standards, to either place it on a table or between the knees, a very essential feature when comparing them with the old style stands and lasts. The lap iron also has three cups or receptacles for tacks, pegs, etc., thus obviating the necessity for having several small boxes lying around, which are always liable to be upset or mislaid. "It is the only article of like nature with

which the purchaser can get either round or razor toe lasts," they say. "The almost universal use of razor or pointed toed shoes is a guarantee that parties who, from choice or necessity, do their own cobbling, will at once appreciate this as one of its many advantages." The manufacturers will gladly send descriptive catalogue on application.

S. L. Allen & Co.'s New Machines.

S. L. Allen & Co., No. 1107 Market Street, Philadelphia, Pa., are offering the trade, this year, two new and improved

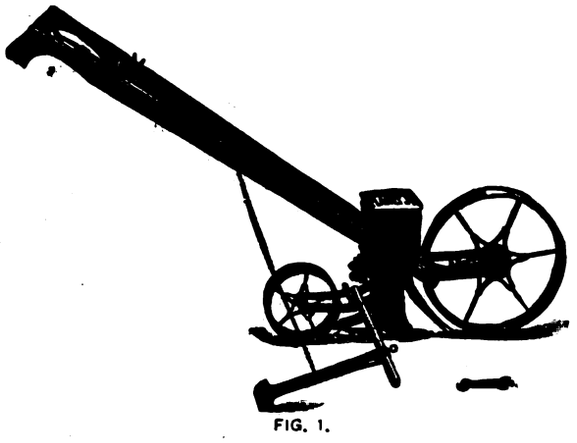

FIG. 1.

implements. One of them is their new No. 3 Drill, which is described as fulfilling in the best possible manner, all the requirements of a tool for sowing all kinds of garden seeds. It is described as compact, light, strong, easily adjusted, and extremely perfect in all its work, planting with almost astonishing regularity either in hills or in drills from four to twenty inches apart. It is shown in Fig. 1.

The second of these two new implements is their new No. 8 Horse Hoe and Cultivator, an illustration of which is shown in Fig. 2. They explain that this combines the practic-

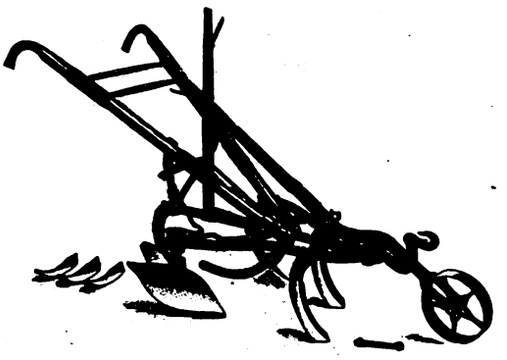

FIG 2.

al knowledge and experience gained by them in designing and manufacturing this class of goods during the past twenty-five years. They say: "The lever expander, handle braces, cultivating steels, attachments, and strength and finish, which are peculiar to this machine, make it unrivalled for opening furrows, covering, hoeing, cultivating, ridging, hilling and turning vines in every crop cultivated by horse power; while our new depth regulator will be appreciated by every user of a one-horse cultivator. It is attached to the center of the machine, worked simultaneously with the wheel by the wheel lever, and removes entirely the tendency of this class of tools to run deeper behind than in front in soft ground, making it therefore unnecessary to hold up on the handles."

We have at hand the 1896 illustrated price list of the McKinney Mfg. Co., Allegheny, Pa. It is handsomely gotten up, with a black flexible cover with gold lettering. In the front of the catalogue is a view of the works, which, we are informed, are the largest hinge works in the world. One of the features of this publication is the representation of the labels in colors, used to mark the company's goods. They are shown in several combinations, including green and black, red and black, blue and black, pink and black, yellow and black, black and bronze, blue and bronze, and others. The company manufacture polished steel butts, strap and T hinges, trunk hinges, felloe plates, washers and special goods in wrought steel. The company say: "We take pleasure in presenting to you our new price list, and we solicit your trade, assuring you that it will be our aim to give you the utmost satisfaction both by prompt and careful attention to orders, and by giving you a line of goods that has no superior in the market. We have added largely to our buildings and machinery and now have the largest works in this country for the exclusive manufacture of steel hinges and butts. This edition contains the new list prices of bntts, and strap and T hinges, carefully revised and corrected to January 1, 1896, and all list prices issued by us prior to this date are hereby withdrawn."

The Zucker & Levett & Loeb Co., Nos. 526-530 West Twenty-fifth Street, New York, were described in our latest issue as having published in their new catalogue "a complete description of an electrotyping plant, with the parts necessary for a nickel-plating and polishing outfit." The word that should have been used was "electroplating." They do furnish plants for electrotyping, but that is a comparatively small part of their business.

During nine months of 1895, England exported $4,000,000 worth of bicycles. Of this amount the United States took only $94,000 worth.

The Monarch Cycle Factory.

The accompanying illustration shows the factory of the Monarch Cycle Co., Lake, Halsted and Fulton Streets, Chicago. To supply the rapidly growing trade, the company have found it necessary to make large yearly additions to their factory. The addition of the past season is a factory in itself, consisting of an eight-story and basement building, 100 by 125 feet, giving 115,000 square feet additional floor space, making a total of over 225,000 square feet in the entire plant. Throughout this new building has been installed a large amount of the finest machinery for bicycle construction known to mechanical science. The total cost of the addition approximates one quarter of a million dollars.

Industrial Progress of Japan.

A correspondent of the London *Times* sends an account of the Kioto Industrial Exhibition, which he visited along with a crowd of whom nearly every third man was armed with a note book. "The Japanese," he says, "are rapid writers, and seem to take as copious notes of what they observe in their own country as they have been doing in Europe and America these thirty years past. The exhibition is national and periodical, being held every fourth year, for the express purpose of stimulating progress in arts and manufactures, and their success in this direction has not been small. The charge for admission is 5 sen, equal at present exchange to 1½d. On Saturdays the fee is reduced to ¾d., and on Sundays it is raised to 2½d., and so on, farthings, or less, for pennies throughout. What the exhibition has to show of progress in the various branches of manufacture could not be adequately described, even by an expert hand. As a whole, the useful preponderates over the ornamental. The variety of new fabrics, the wealth of new designs, and the audacity of new adaptations of material to the wants of life are all so impressive that one cannot resist peering into the not distant future when yet greater developments of the creative energy of Japan will be revealed, possibly to the consternation of the West of the Christian world.

"The Japanese are keen learners and anxious to accommodate—two most important qualities in which the universal experience of alien mankind pronounces the English manufacturer to be conspicuously deficient. The hats made by the Japanese and universally worn by them may not be equal to Lincoln & Bennett's, but they look well, and, I am informed, wear well, and so serve every practical purpose one wants of a head covering. These hats, in felt, hard or soft, cost 3s. 6d. in Japan, and could not be bought in the cheapest shop in London under 8s. 6d., generally 10s. 6d., and I suspect the superior finish of Sackville Street would run the price up to 15s.

"Boots and shoes I can vouch for from personal experience, whether made by Japanese or by Chinese. I have worn them in London, and had them valued by London bootmakers at just double what they actually cost. Eyeglasses and spectacles, again, may not be equal as to either lens or frame to Carpenter & Westley's make, but it would take an expert to tell the difference by inspection. In donning the western dress the Japanese do not, as might have been a priori expected, seek the cheap and nasty; it would be repugnant to their nature to do so. They never go shabby, and they show a decided penchant for black cloth and white linen. I generally find my Japanese friends better dressed than myself. Neatness in dress and cleanliness in person, house, street, boat or carriage are instinctive with these people—it is an instinct of perfection and order, and, rightly considered, is undoubtedly the key to the Japanese secret."

Digitized by Google

Caro's Budget.

H. P. McGhee, the enterprising Hardwareman of Wellston, Ohio, has arranged to put in the Moore display shelf boxes, and will, in fact, make a general improvement in his store. His business is increasing, and he will have to utilize all available space.

Fred. Hamilton, of Smith Bros. Hardware Co., Columbus, Ohio, (a genial hustler) reports trade improving, and Fred. is an observing individual, and should know.

R. L. Neal & Co., Parkersburg, W. Va., among the brightest and progressive of the up-to-date Hardwaremen of this section, are enjoying an elegant trade, and say prospects for a successful year are flattering. They handle everything in the Hardware line, and are upright and clever gentlemen and business men.

Farson & Potter, Belpre, Ohio, are a hustling firm, who will have the trade their energy and cleverness deserve. They carry a full line of general and fancy Hardware and agricultural implements, and have a tin shop in connection therewith. They handle the Thomas wheel, and expect a large sale for '96. They have had quite a run on the Marietta stove.

M. A. Kropp, Marietta, Ohio, has been having his share of the trade, and says that prospects for '96 are very good. Sickness in his family prevented Mr. Kropp from attending the meeting of the Ohio Hardwaremen's Association, at Dayton, Ohio, February 12th. Mr. Kropp carries a full line usual in a first class Hardware store.

H. P. Theis, has one of the nicest and best Hardware stores to be found in Marietta, Ohio, and is a jolly, clever and wholesouled man, with an eye for business every time. Mr. Theis carries a full line of Hardware, and in fact everything to be found in an A. 1. Hardware store. He also has my old favorites, the Tremont stoves and the Lawrence paints. I should like to give a description of the display which won him the "red ribbon" at the fair, but description in the space allowed is impossible.

Hagan & Schad, Marietta, Ohio, are both good fellows; both hustlers; but I fancy George is the better singer of the two. They contemplate general improvements in their place of business this spring, among which will be the erection of a two-story "bike" repair shop 20 by 40 feet. They handle the Sunol wheel, and I need not say have a large sale.

Ben. J. Throop, representing A. S. Teachout & Co., sash and door manufacturers, of Columbus, Ohio, was a traveling companion of mine a part of last week, and I want to say I am his debtor for the pleasure I had. Hardwaremen who deal in sash, doors and blinds will find "Ben." one of best of fellows, both socially and in a business way. Bone him for a memorandum book "but don't tell him I told you."

W. R. Tucker, Beverly, Ohio, is having a very good trade, and his smiling countenance verifies his assertion that he is doing his share. He has furniture in connection with Hardware, and a nice store.

I came very near having to chronicle an event that would not only have given me pain, but pain as well to the hundreds of friends of the popular Jesse A. Scott, the junior member of the Hardware firm of Beswick & Scott, Stockport, Ohio, but fortunately I can express congratulation instead of condolence. While driving into the Muskingum River, Wednesday, the 5th inst., to wash the mud from his horse, the swollen river overturned the cart and threw him out into the raging torrent. The accident occurred just below the dam, and the strong undertow caught him and was rapidly drawing him back under the dam, which would have meant certain death, when he was fortunate enough to grasp a projection on the side of the mill, and supported himself until help arrived. With the aid of a plentiful supply of that sterling remedy in such cases, Bourbon, Jesse was able to relate the circumstances the next day. The horse, a valuable one, was drowned, but the harness and cart were saved a few miles below.

I wish to say a few words to the Hardware trade in general, and to the Ohio Hardwaremen in particular, on the subject of Hardware Associations. All realize the many evils resulting from the hap-hazard and price-destroying manner in which the business is now conducted in many localities, yet there is a hesitancy on the part of the majority of the trade to lend a helping hand to the best of movements—the trade association. There is a disposition to stick to the "old rut," and make no effort to pull out of it. Let me say a good word for, not only the state organization, but also for city and county organizations as well. The good resulting from such an association can scarcely be estimated, but where the members are earnest in their endeavors to benefit one another, the benefit is not long in manifesttng itself. As regards the officials of the Ohio State Association, too much praise cannot be given them for their persistent efforts to increase the membership and promote the general welfare of the association. Their efforts have proven effective and such were seen at the meeting in Dayton.

When the retailer sees that the only way he can prevent the jobber from selling to his customers is through organization, then perhaps we will see a stronger movement towards the desired end.

The outlook for '96 is indeed flattering, and one can scarcely find a complaint this spring. To the observant traveling man the outlook is better than it was a year ago. The improvements already made, and in contemplation, testify that '95 was not the worst of years. Everybody seems cheerful and content with the prospects, and why shouldn't we be? That it will be a rattling good year is the prediction of CARO.

The Reading Hardware Co., Reading, Pa., who are always coming to the front with some artistic attraction, have issued a large and copiously illustrated catalogue on Window Screen and Screen Door Hardware. Most of the goods illustrated are new lines for the company. They include a large assortment of screen door catches, spring hinges, shutter knobs, hook sash lifts, "Caldwell" screen door checks, window screen corner brackets, screen door brackets, door pulls and Duplex wrought butts. The company make the following announcement: "All screen door catches illustrated and described in our 1891 catalogue are hereby made void." They further remark that: "In the present catalogue it will be noticed that our line of trimmings for window and door screens has been materially increased. We have extended our facilities in order to meet the growing demand for handsome well-made goods for this purpose, and they will be found perfectly satisfactory in every respect." It is a timely catalogue for any dealer to examine, and will be sent on application.

The factory of the Monarch Cycle Mfg. Co. is being run to its full capacity, the average daily shipment being 300 bicycles. The reputation of the Monarch is world-wide, as is evidenced by the following foreign shipments during the past month: France, 48; Germany, 41; Hungary, 39; Italy, 33; Holland, 28; Denmark, 27; Norway, 24; Sweden, 24; Turkey, 19; Russia, 17, besides smaller shipments to Great Britain, China, Japan, India, Australia, New Zealand and nearly all the South American countries.

Kruse Kross Klevis Co., Higginsville, Mo., Feb. 13, 1896, *Hardware*: "Your notice card arrived to-day. We are pleased to state that the copy of *Hardware* has not yet arrived, but, an inquiry, the result of the ad. (in Feb. 10 issue) has come in this mail. Can you beat this?"

In 1894 Germany exported 56,414 tons of wire nails and 209,000 tons of wire.

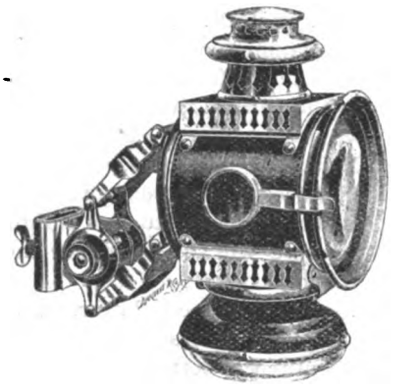
ILLUSTRATED BICYCLE NOVELTIES.

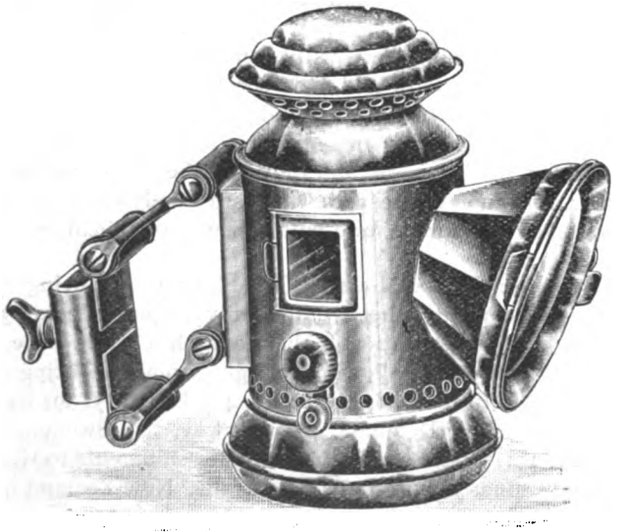


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

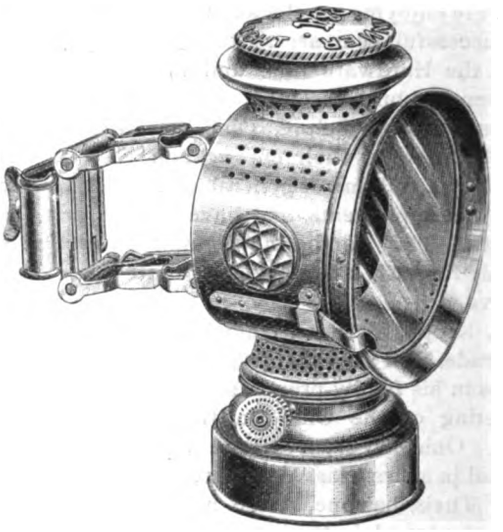
Tally-Ho Lantern.



The Bridgeport Gun Implement Co., Nos. 313 to 315 Broadway, New York, are offering the Tally-Ho Bicycle Lantern as here shown. It is made of drawn brass of two

styles of finish, black japan, nickel trimmed, and polished nickel throughout. The lantern will burn kerosene, and the parts are riveted. It has inside oil filler, adjusting screw on bracket to regulate angle of light, match scratcher on inside, removable reflector, double convex lens and locking device to prevent wick from jarring down, most of which features are patented devices. It is equipped with red and green side lights, burns, it is stated, nine hours and weighs one pound. A special lantern will have a patented locking device for locking lanterns directly on to the head of bicycles, dispensing entirely with the lantern bracket, which is supplied at a small additional cost. The lamps are guaranteed, and, we are informed, will not jar or blow out.

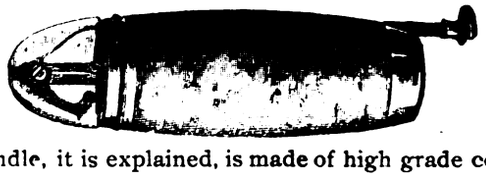
The Liberty Light.



Hermann Boker & Co., Nos. 101 to 103 Duane Street, New York, will shortly introduce a new bicycle lantern

called the "Liberty Light," cut of which is herewith shown. It is made of spun brass throughout and finished in nickel, and has a detachable top and bottom and detachable solid reflector. The side lights are red and green, one of them opening, as a convenience in lighting the lamp. A sixteen-sided cone holds the lense, which is said to be finely cut. The lantern will burn either bicycle oil or kerosene.

The Banner Bicycle Light.



The Plume & Atwood Mfg. Co., No. 29 Murray Street, New York, and No. 199 Lake Street, Chicago, are introducing the Banner Bicycle Light as shown by the accompanying cut. The company will be able to furnish them in quantities in a short time. The lamp is said to be wind-

proof and it burns kerosene oil. The company say that as they are "the leading manufacturers of kerosene oil goods and make probably fifty per cent. of the entire output of kerosene burners," they "believe that we have succeeded in making a bicycle lamp superior to anything on the market." It is remarked that "all parts are riveted or seamed. There is no solder to melt. The top is removable, also the fount and the burner as well as the reflector. This makes it very easy to clean the lamp. The removable top is a most important feature, because that is the point where the soot first accumulates and obstructs the glass. This accumulation causes a smoking and imperfect combustion in lamps." The company state that in its construction they had specially in view the cleaning of the lamp after it had become smoked or dirty, and have succeeded in making a lamp that is easily taken apart and easily put together again. The fount unscrews from the burner. This means convenience in filling. It is packed with cotton, preventing any splattering of the oil in the jolting of the wheel. The burner is attached to the lamp proper by a bayonet catch so that both the burner and the fount can be removed in an instant. The lamp is 5½ inches high and the gas reflector 3 inches in diameter. The glass as made gives a double reflection, both downward and straight ahead. The weight of the lamp is 12 ounces. It is clean, simple, light and durable. While none of the lamps have yet been marketed, large orders have been placed for early delivery.

Bridgeport Handle Bell.

The Bridgeport Gun Implement Co., Nos. 313 to 315 Broadway, New York, have recently put on the market a Handle Bell for bicycles as shown in the accompanying cut.

The handle, it is explained, is made of high grade corkaline with German silver tips to match regular corkaline handles; and that the bell is made from the best bell metal. The bell has, it is remarked, a high-toned sound and fills all requirements of the law, besides being invisible and very light in weight. The combined handle and alarm bell is de-

Digitized by Google

signed to be placed on the handle bar instead of the regular handle, and to give the rider free use of the handle bar. The bell is rung by pressing the button at the inner end of the handle. The manufacturers make the point that the rider can operate the bell and still retain a firm hold of the handle bar; that the bell will not get out of order, and that it obviates the necessity of the ordinary style of bell which does not improve the appearance of a bicycle.

"Perfect" Barrel Spray Pump.

F. E. Myers & Bro., Ashland, Ohio, have added to their immense and popular line a new Barrel Spray Pump, to which they have given the name "Perfect." They explain that the particular features of superiority in the construction of this pump consist in its large capacity and great power. It is constructed with an air chamber of over two gallons capacity, whereby the pump is allowed to store up power, and the stream is made constantly elastic and does not show vibration during the operation of pumping. The cylinders of the pump are brass and brasslined; the check valve and valve seat, and lift buckets are all brass, ground seats; the plunger is constructed in harmony with their patent Expansive Plunger, so arranged that additional pressure means additional expansion, making the packing qualities self-compensating. The operation of the pump is double-acting in discharge and power, operating with a lift and plunger bucket, arranged so that the labor of pumping is equal on the up and down stroke; has good leverage. The base is the proper shape so that the pump can be set on the head or side of a barrel; is arranged with two discharge outlets so that two streams of hose can be used at the same time. Fig. 1 shows the pump without hose attached. Fig. 2 is a good illustration of the pump placed on the head of a barrel, equipped with liquid agitator, and two lead hose. Fig. 3 shows the pump mounted on a barrel, equipped with mechanical agitator, and two lead hose. The mechanical agitator is so arranged that the instant the pump is put in operation the agitator is also put in operation, so that the liquid is constantly stirred up and well mixed. The same operation holds good with regard to the liquid agitator, the instant the pump is put in operation, a jet is allowed to escape at the bottom of the agitator, thus keeping the mixture constantly stirred up. They submit both styles in order to meet any requirement. These pumps, when equipped with the proper amount of hose, pipe extensions and their latest nozzles, meet, the makers say, "every requirement."

FIG. 2.

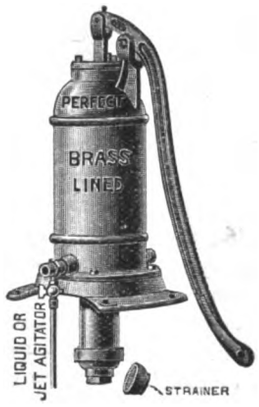


FIG. 1.

FIG. 3.

Darling, Brown & Sharpe on Rules.

Darling, Brown & Sharpe, Providence, R. I., have issued an interesting catalogue describing and illustrating their rules. The company say: "In 1850, Joseph R. Brown began the manufacture of steel rules and other instruments of precision, and, in 1852, Samuel Darling began a similar line of work. After several changes in the business of each, the partnership of Darling, Brown & Sharpe was formed, in 1866, and the business has since been carried on under this name, a name which has become widely known in this and foreign countries by reason of the accuracy of its work. In the following pages we call attention to rules only. In addition to the lines of rules made for such a number of years, we have recently introduced a line of Tempered Rules. We have long had under consideration the making of these rules, but were not satisfied with methods that had previously been in use, as the results were not sufficiently accurate. After an extended series of experiments, we have perfected machinery, however, whereby we are now able to furnish tempered rules as accurately graduated as the standard or soft rules." The company also manufacture steel key seat rules, steel caliper rules, steel ladies' work basket rules, steel shrink rules, boxwood shrink rules, square steel rules, triangular steel rules, triangular metallic scales, triangular boxwood scales, improved scales for draughtsmen, standard steel yard measures, standard steel rules graduated to thousandths, and steel gear rules for sizing gear blanks.

The Cronk Hanger Co., Elmira, N. Y., show on page 71 of this issue an illustration of Cronk's Roller Bearing Barn Door Hanger, which they describe as made heavy, will run a door any distance, and "guaranteed to run a lifetime." They further explain that they have "tested the rollers for one year, with a weight of three thousand pounds, running ten hours per day, at sixty revolutions per minute, without showing any wear." Sizes and prices may be found upon the page referred to.

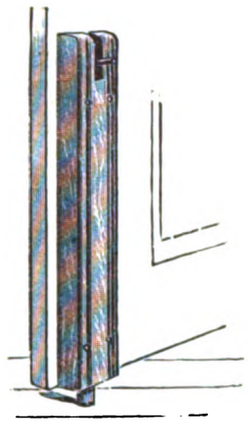
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

A New Door Holder.

The A. J. Phillips Co., Fenton, Mich., are introducing the Door Holder shown in the accompanying cut. It is designed to keep doors from swinging and is made of oiled hardwood, with a strong spring and a rubber foot. To attach the contrivance to the door, as shown in the illustration, turn the wire stem and allow the rubber foot to press on the floor. It is remarked that the holder will hold the door wide, or partially open, enabling the temperature of a room to be regulated. When not in use, the heavy wire lifting stem can be raised and turned. The manufacturers remark that the device is generally used to prevent the slamming of doors. Packed with round head screws, two dozen in a box. Listing at $1.20 per dozen. The company also manufacture screen doors.

The Prouty Ball Bearing Door Hanger.

The T. C. Prouty Co., Midland, Mich., are offering the Ball Bearing Door Hanger shown in the accompanying cuts. The wheel, Fig. 1, has a tread—the part coming in contact with the track—made of a turned ring of vulcanized fiber to render the action of the wheel practically noiseless. This tread is mounted on steel sleeves formed from machinery steel under heavy pressure into a cone constructed to receive in the most suitable and practical manner a series of 16 bicycle balls standard made ¼ inch in diameter, carefully hardened and ground. These balls are divided into two rows, eight on each side of wheel, which is kept from having a lateral motion by a central enlargement of the shaft, which is turned from special tool-steel by automatic machinery and afterwards tempered and tested. The base plate, shown in Fig. 2, is referred to as simple, yet effective, and can be applied without cutting or mortising the door. At the front edge is a raised lug to receive and lock the adjustment key, which is pivoted to the adjustment screw and serves not only as a key but also forms a lock to retain the hanger in the base plate and to render it impossible for the adjustment to become disarranged. To adjust, the ends of key are pressed together, which, it is explained, will release them from the lugs on the base plates, and draw the hanger to front edge of door. This allows the key to hang down at an angle of 20 degrees,

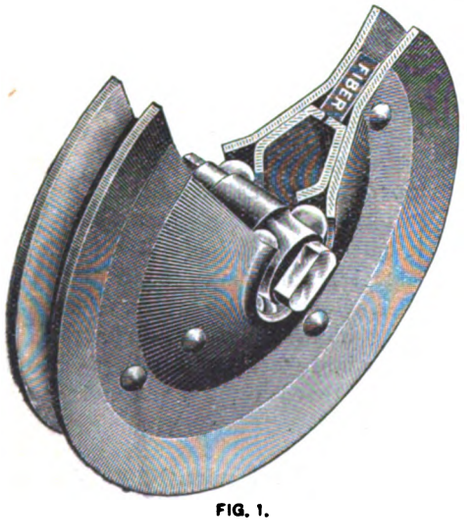


FIG. 1.

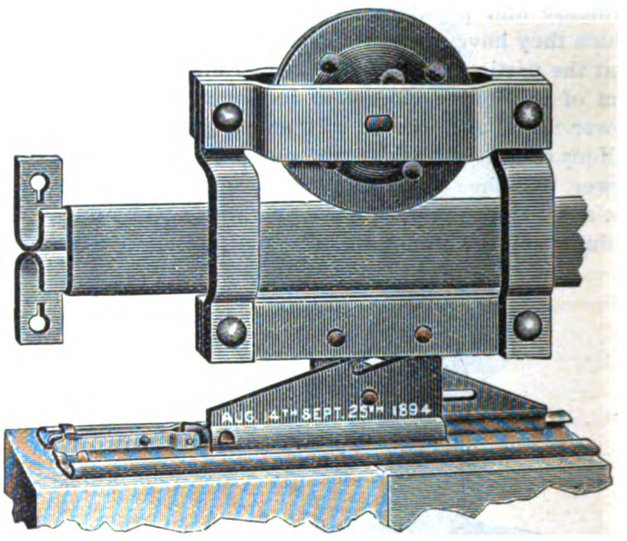

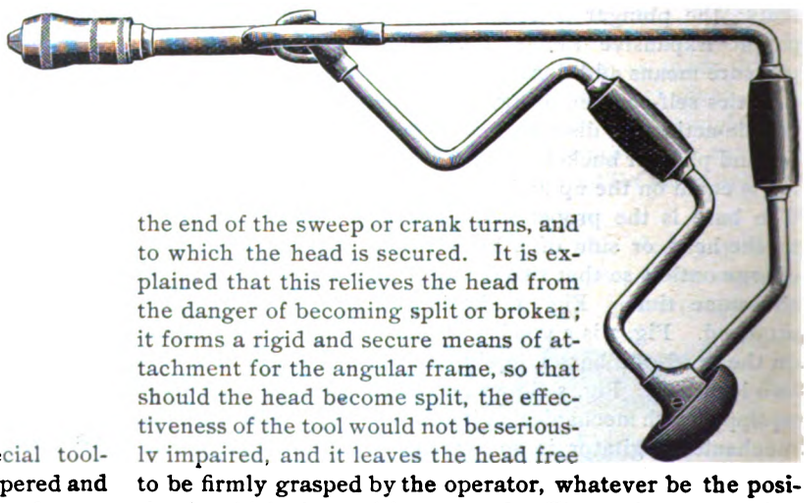

FIG. 2.

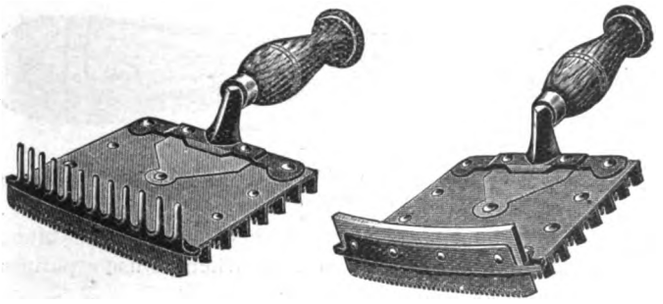
so that it may be used as a screw driver acting on the adjustment planes. The hanger and single track, all steel, are shown in Fig. 2, the hangers and attachment being given a bright finish, and covered, it is stated, with a thoroughly rust-proof varnish. The point is made that the adjustments are detachable from the top of the door instantly, and can be adjusted and permanently locked without the use of screw driver or wrench. The track is packed complete with screws in 14-foot bundles for full sets, and 8-foot bundles for half sets. Each bundle is wrapped in paper ready to hand over the counter. The manufacturers state that one of their wheels, after having made over 1,000,000 revolutions under a steady weight of 200 pounds, was found to be in excellent condition.

DuMont Patent Corner Brace.



The DuMont Mfg. Co., Buffalo, N. Y., are placing on the market the improved Corner Brace, as shown here. The improvement consists of a malleable iron socket in which the end of the sweep or crank turns, and to which the head is secured. It is explained that this relieves the head from the danger of becoming split or broken; it forms a rigid and secure means of attachment for the angular frame, so that should the head become split, the effectiveness of the tool would not be seriously impaired, and it leaves the head free to be firmly grasped by the operator, whatever be the position in which the tool is operated. The makers state that the change permits the using of Lignumvitæ heads and cocobola handles, thus increasing the beauty and value of the tool. The steel rods and other parts are heavily nickel plated.

Digitized by Google

Two New Curry Combs

The Decker Mfg. Co., Keokuk, Ia., are offering the Curry Combs shown in the accompanying illustrations. They present a new idea in close back curry combs. The backs are made of spring steel or spring brass, and are said to be very flexible and durable. The bars are also made of spring steel or spring brass, and the centers of the backs

being cut out they are rendered springy and flexible. It is remarked that these particular qualities make the combs soft and easy on the animal, because they readily adjust themselves to the uneven surface of the body. It is explained that this new construction of a curry comb bar makes it less liable than a rigid bar to lacerate the skin, besides the vibrations of the bar keep the dirt and dust from sticking to it, leaving the comb always free and clean. Comb No. 105 has a rake attachment, as shown in the cut, which is of great assistance when grooming a horse, to comb its mane and tail. The rubber scraper or shedder on the No. 110 curry comb is of great assistance in scraping off sweat, water or mud, or the hair from a shedding animal. The makers state that it is so soft that it will not irritate the body or legs of the most sensitive animal.

Street Lanterns.

The accompanying cuts show two Street Lamps, Nos. 55 M and 56 M, offered by Edward Miller & Co., Meriden, Conn., and Nos. 28 and 30 West Broadway, New York.

They are fitted with Nos. 2 and 1 burners respectively. From base to cap the extreme dimensions are 23¼ inches and 4 inches higher with raised bail. The lamp is said to be powerful as an illuminant, giving a large white flame, the No. 1 burner having a capacity of 30 candle-power, and the No. 2 burner 65 candle-power. The iron frame is black, with lamp and top in green. The base has a spread of 15¼ inches. The makers call attention to the following points: that the lantern is easily filled, has outside nickel adjustment, and that the lamp is readily removed by raising the globe and sustaining it on the hook for that purpose. The same method is also followed when lighting it.

Iwan's Wire Pipe Hanger.

Iwan Bros., Streator, Ill., are offering the Wire Pipe Hanger shown in the accompanying cuts. It is designed for conducting pipes, and can be used on either wood or

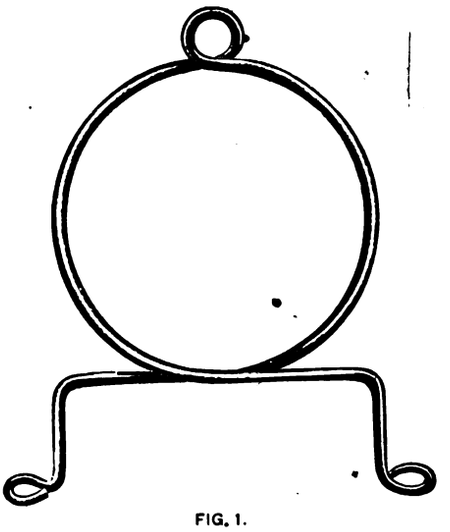


FIG. 1.

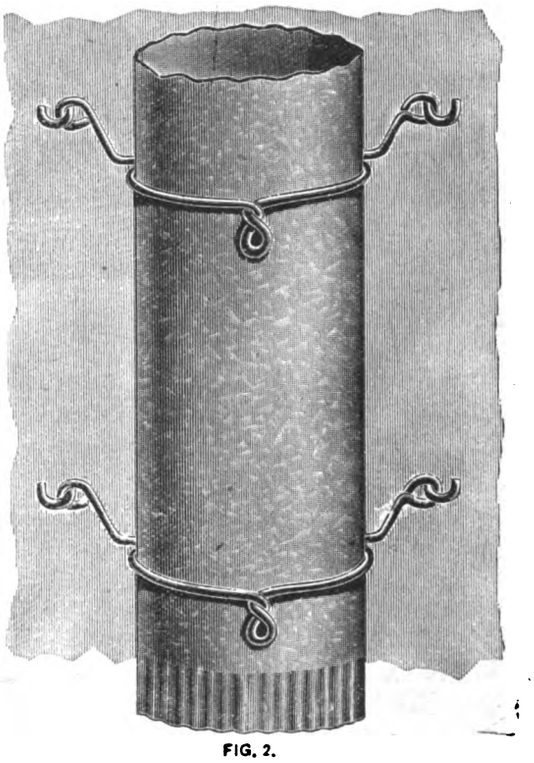
brick buildings. Fig. 1 shows the hanger. The hanger holds the pipe from the building, which permits of the pipe and building being painted, and leaves no place for dirt and dust to lodge against the building. The makers state that a tinner can put up more pipe in the same length of time than with the tin strap; at the same time it is cheaper and



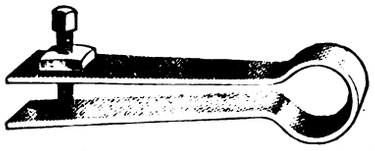


FIG. 2.

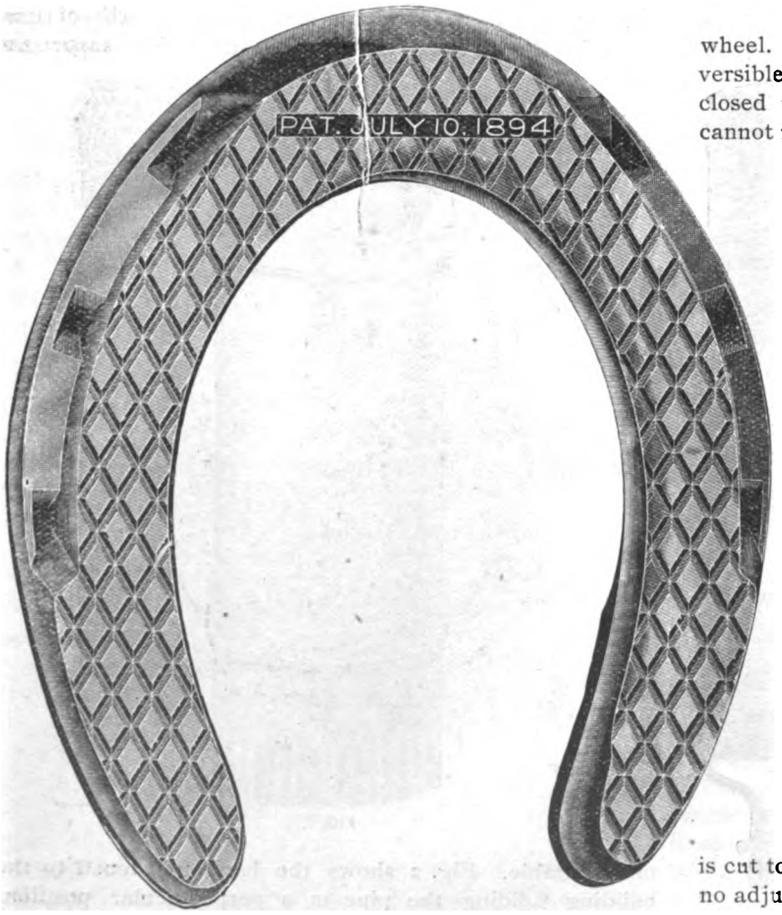
more durable. Fig. 2 shows the hanger fastened to the building holding the pipe in a perpendicular position. For fastening the hanger to the building use small staples; nails can also be used; for brick buildings use spikes. The hanger can be tightened as desired by giving the eye a twist, which will draw the hanger tight around the pipe. They are made in 2, 3, 4, 5 and 6 inch sizes.

Digitized by Google

"Stiles" Anti-Rattler.



The Genor Bros. Mfg. Co., No. 87 Washington Street, Buffalo, N. Y., are offering the Stiles Anti-Rattler shown in the accompanying cut. Anyone who has ever used a buggy or wagon recognizes the necessity of a device that

will take up the slack between the rear end of the thill or pole-iron, and the rear wall of the axle slip, and it is remarked that the Stiles will do the work satisfactorily, on account of its cheapness, simplicity, and the ease with which it is applied. It is explained that if it is desired to change from thills to pole, that the bolt can be readily removed from the thill eye without driving, thus avoiding brushing the threads on the bolt. The makers state that the anti-rattler is tempered so as not to be easily broken, and that it is adjustable, and can be tightened to any tension, thus obviating the use of wedges.

The Gibbs Rubber Cushioned Horseshoe.

The Whitman & Barnes Mfg. Co., No. 111 Chambers Street, New York, are placing on the market the Rubber Cushioned Horseshoe as shown in the accompanying cut. The shoe consists of a forged steel frame, pierced with slots through and around which a rubber cushion is vulcanized, forming a compact and solid but elastic shoe, composed partly of rubber and partly of steel. The illustration shows the rubber on the bottom of the shoe. The dark line on the part of the shoe coming next to the foot indicates the rubber encircling this part of the shoe. It is explained that the rubber takes the concussion of the blow of the foot on the pavement off the hoof, leg and shoulder of

the horse, curing the lame horse and saving from lameness the sound animal; also that it keeps the foot from heating, not only making the hoof healthy but preventing puffs and windgalls, and relieving and preventing corns. It is remarked that the rubber on the bottom prevents slipping on smooth pavements. It is pointed out by the manufacturers that the device is not a pad but is a regular cushioned shoe, covering no more surface on the hoof than an ordinary steel shoe; also that it may be readily shaped to the foot when cold.

Tracing Wheels.

The accompanying cuts represent three designs of tracing wheels manufactured and now being put on the market

NO. 15 TRACING WHEEL.
FIG. 1.

by the Geo. L. Thompson Mfg. Co., makers of Hardware specialties, Nos. 6126–6130 La Salle Street, Chicago. Fig. 1 represents the No. 15 tracing wheel, which is of blued steel, made flat on one side so that when in use a pattern

NO. 25 TRACING WHEEL.
FIG. 2.

can be accurately traced. All the teeth are sharp and perfect. The post is nickel-plated and fitted with an ebonized finger rest. The handle is of antique oak with nickel-plated ferrule. Fig. 2 represents the No. 25 double tracing

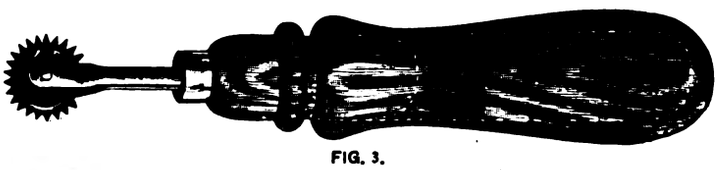


FIG. 3.

wheel. Fig. 3 shows the No. 30 safety, which is made reversible, so that when not in use the wheel is entirely enclosed in the handle. When lying in a work basket it cannot injure or become entangled with other articles, and when necessary it can be safely carried in the pocket. It is made of the same material and finished up the same as the first in Fig. 1. Put up one dozen in a box.

The Jack Lee Ankle Brace.

The Lee Ankle Brace Co., Fremont, Neb., are offering an Ankle Brace for use in skating, illustration of which is here given. It consists of a ribbed steel nickel-plated side piece 8 inches long, secured to a broad piece of leather with a strap at the top to buckle around the ankle. The lower part of the brace is bent so as to go under the heel-plate of the skate, and is provided with a hole for riveting it to the skate runner. The trimmings are of oak tanned russet grain leather. The brace is attachable to any skate, and is made in but one size. For the use of children the strap is cut to the proper length, while for adults the brace needs no adjusting.

The world has need of every man, but it does not need him as badly as he thinks it does.—Ex.

France has produced a new fuel, composed of chemically soaked coal dust made into bricks.

THE HARDWARE DINNER OF 1896.

The Hotel Savoy, which overlooks Central Park and the busy scenes of Fifth Avenue, may have held within its magnificent dining room, a larger and more enthusiastic gathering than was seen there on the night of Thursday, February 20, 1896, but we very much doubt whether such has been the case.

All of the dinners given in recent years by the Hardware trade of New York, have won success in no small degree, but the culmination came in the gathering above referred to; and in all the surroundings and appointments, the dinner was the best, and in many respects the most successful of any yet recorded—with the possible exception of that initial dinner of 1892, which was the first of these great gatherings.

The entire parlor floor of the great hotel was given up to the use of the Hardwaremen, and when the first guests

PETER McCARTEE, PRESIDENT

of the evening began to arrive, at a little after six o'clock, they were met by the reception committee and members of the board of governors of the Hardware Club, whose names will be found below. By seven o'clock the parlors were filled with a large and representative gathering, and it is needless to say that sociability was the reigning feature of the hour. At a few minutes after seven o'clock, Chairman Clinch had the doors of the dining room thrown open, and a scene of unrivalled beauty and splendor dawned upon the vision of the Hardwaremen. The magnificent dining room of the hotel was banked with palms and flowers, and all the appointments were complete, and in keeping with the high reputation of that great hotel. Five tables were stretched the length of the hall, flanked at the further end by a raised dais, for the use of the officers and the guests. The gentlemen filed in, and each found his place by the use of a diagram which showed just where to go. When there, he found at his plate a handsome and artistic souvenir with his name inscribed thereon, and donated by the generous courtesy of the *Iron Age*. This was in the form of a book, the cover of which represented a door with clasps and hinges, and firmly held together by an actual but diminutive padlock, which worked at the touch of the recipient. The cover was finished in a paper resembling curly maple, and the same idea was carried out on the pages enclosed, upon which were found the lists of officers, the order of exercises, menu, etc. We reproduce here the matter upon the first cover, and the contents of the same in the order in which they appeared, as follows:

SEVENTH DINNER

OF THE

HARDWARE AND METAL TRADES,

HOTEL SAVOY,

NEW YORK, FEBRUARY 20,

1896.

SOUVENIR.
WITH THE COMPLIMENTS OF
THE IRON AGE.

HARDWARE CLUB OF NEW YORK.

Peter McCartee, president; Robert H. Swayze, vice-president; Thomas F. Keating, treasurer; John L. Varick, secretary.

BOARD OF GOVERNORS:

Eugene Bissell, Alfred D. Clinch, Charles Daly, Brace Hayden, Thomas F. Keating, James H. Kennedy, Peter McCartee, Mortimer C. Ogden, George H. Sargent, Arthur G. Sherman, Robert H. Swayze, Edward C. Van Glahn, John L. Varick, Webster R. Walkley, Richard R. Williams.

DINNER COMMITTEE:

Alfred D. Clinch, chairman, Eugene Bissell, Brace Hayden, James H. Kennedy, George H. Sargent, Edward C. Van Glahn, John L. Varick, Richard R. Williams.

RECEPTION COMMITTEE:

Robert Sickels, Chairman, Thomas J. Atkins, Terence F. Curley, James D. Foot, George J. Laighton.

GRACE, - - - The Rev. Anthony Harrison Evans.
What God gives, and what we take,
'Tis a gift for Christ his sake;
Be the meale of beanes and pease,
God be thanked for those and these;
Have we flesh or have we fish,
All are fragments from His dish. HERRICK.

TOASTS.

We'll push back chairs and talk. Browning.

GREETING, - - - - - Mr. Richard R. Williams.
Great welcome makes a merry feast. Shakespeare.

PATRIOTISM AND PARTISANSHIP,
The Rev. Melancthon Woolsey Stryker, D.D., LL.D.
The ever-lustrous name of patriot
To no man be denied because he saw
Where in his country's wholeness lay the flaw,
Where on her whiteness the unseemly blot.
Best they honor thee
Who honor in thee only what is best. Watson.

OUR NATIONAL PROGRESS, - - Mr. James H. Hoyt.
That trade's proud empire hastes to swift decay.
As ocean sweeps the labored mole away;
While self-dependent power can time defy,
As rocks resist the billows and the sky. Goldsmith.

POLITICS AND BUSINESS, - - - Hon. Horace Russell.
We shall exult, if they who rule the land,
Be men who hold its many blessings dear,
Wise, upright, valiant. Wordsworth.

REMINISCENCES, - - - Gen. James R. O'Beirne.
O thou wealthy past!—Fanny Kemble.

A band in the gallery furnished appropriate music, as the guests marched in. Each gentleman stood by his plate until the officers and the guests, headed by President Peter McCartee, marched up the main aisle and took their seats at the table of honor. The location of each officer and guest may be found upon an examination of the diagrams accompanying this report.

With a rap of the gavel, President McCartee called the gathering to order, and after grace was said by the Rev. Mr. Evans, a couple of hours were spent in disposing of the more solid (and perhaps liquid) portion of the evening's entertainment, the band meanwhile from its high recess in the gallery, furnishing a musical accompaniment to the din of the warfare upon the floor below.

At 9:20 the president arose, and this was a signal for a round of cheers, with a tiger, in honor of the man whom everybody admires, and who is very close to the hearts of the Hardwaremen individually and collectively—Peter McCartee. When silence was restored, the president very feelingly referred to the loss of his honored predecessor in the office of president, in the following touching words:

IN MEMORIAM.

Our memories carry us back to-night to the many previous festivals we have had, and we think of our enjoyment on those occasions, of the friends we have met, of the faces into which we have looked, and of the hands that we have grasped in greeting and in friendship. Many eyes will search this platform for one whom we shall never see again, and who, if he were this side of the Gates of Pearl, would be standing in my place to-night. We miss his erect and manly figure, his beautiful face, his eloquent voice and the ringing sentences of his address; we miss that sense of presence which looks out upon us from the eyes of those we love, and

"Oh, for the touch of a vanished hand,
And the sound of a voice that is still."

Gentlemen, you will rise, and in silence touch your glasses with me to the memory of William Hilton Williams.

Every man arose to his feet, and in a silence which was more eloquent than words, drank to the memory of the departed gentleman, who, though young in years, had won his way into the respect and affection of the trade in all parts of the land.

AN ADDRESS OF WELCOME.

Mr. McCartee next introduced Richard R. Williams, of the *Iron Age*, whom, he said, had consented to voice the welcome of the president and the club to its guests. Mr. Williams spoke as follows:

GREETING BY RICHARD R. WILLIAMS.

Mr. President and Gentlemen: We recognize the propriety of the tribute we have just paid to the memory of one exceptionally gifted and peculiarly honored and beloved. There is no need for many words. In the hush that fell upon this assemblage as we listened to the tender and felicitous address of the chairman, I am sure that more than one of us recalled the expression of mingled sorrow and faith which was evoked by the death of Tennyson,—

"Silence here, for love is silently gazing on the lessening sail;
Silence here, for grief is voiceless when the mighty poets fall;
Silence here, but far above us many voices calling hail!"

It is pleasant to recall the personality of Wiliam H. Williams, the honor in which he was held, and the many kindly expressions which his taking away have evoked. There is, after all, much that is appreciative and unselfish

ALFRED D. CLINCH, CHAIRMAN DINNER COMMITTEE.

in the hearts and lives of practical, hardworking business men.

We should have never known him as we did, nor remember him as we do to-night, had it not been for the Club in which we were associated together, and gatherings like these which unite us in a genial, friendly and fraternal spirit. As I look around this assemblage, I am reminded how many there are, even in our craft, who are worth knowing. It is well to find the better and nobler side of a customer or competitor; to learn that he has aspirations and high principles, and home ties, and tender feelings, as well as ourselves. It tends to lubricate business, and to furnish the wheels of trade with ball bearings. There is less wear and tear to the machinery. It is more civilized and Christian. It is a fine thing to be able to say of a man as was said so truthfully of Agassiz, "where'er he met a stranger, there he left a friend." Such kindly relations elevate and brighten, sweeten and broaden life. In this spirit we mutually greet one another to-night. To this atmosphere, balmy and wholesome, I bid you welcome.

We may indeed congratulate one another on this gathering. We have the honor of having with us as our guests

Digitized by Google

gentlemen of character and position connected with many diverse interests. There are at this board men who occupy high places in divinity, in jurisprudence, in journalism, in finance, in commerce—men prominent in civil and military life. There are here honored representatives from sister associations, who dignify this occasion by their presence, and to all these in your behalf, I extend a cordial welcome.

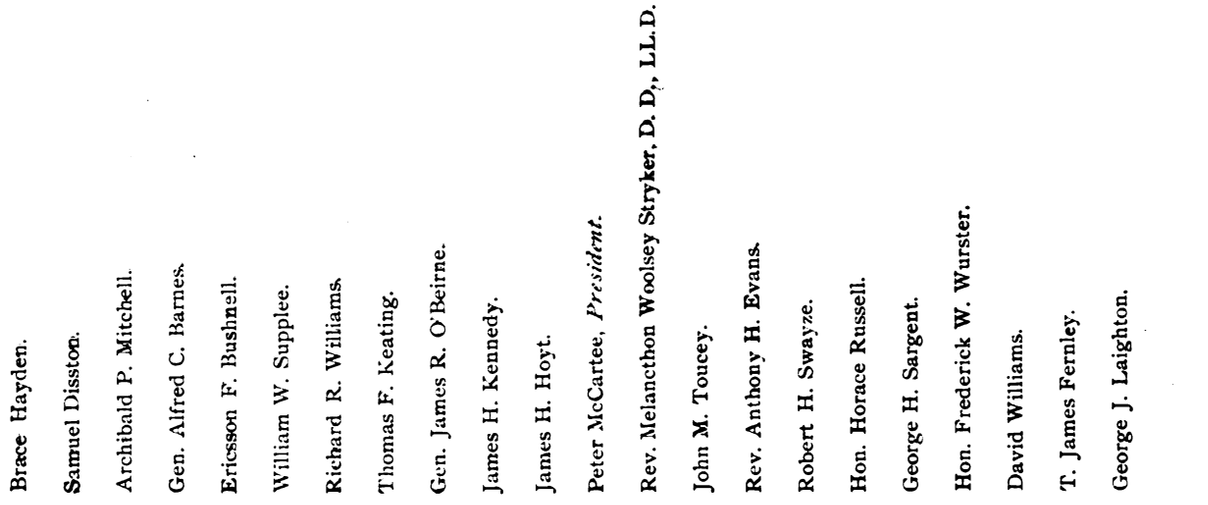
But looking upon this as a trade gathering, permit me to say that this dinner, like those which have preceded it, possesses the unique distinction of bringing together the largest representation of manufacturing and mercantile interests connected with the Hardware trade, to be found anywhere in this country or in the world. There are many here whose names are as household words through the length and breadth of the land. There are manufacturers and merchants present, whose wares go out to the ends of the world, on the products of whose factories the sun never sets. There are those here who have accumulated great fortunes, and more than one of whom it is true as was said of a Boston merchant a generation of two ago: "He has the fortune of a prince, but a heart as much larger than his fortune as his fortune is larger than a beggar's." There are some here who are looking forward to the time when they can make a similar comparison between the extent of their possessions and the tenderness and nobility of their hearts. Others, however, can sympathize with the good wife who said to her faithful husband, "It is hard, George, isn't it, to be poor;" and with George when he said, "Yes, my dear, but not half so hard as to get rich."

I was unable to understand why the president commanded me to make this greeting, until this afternoon, when I read of a minister in Kentucky who was universally known as the "satisfying preacher." Whenever a church became dissatisfied with its pastor, or a vacant church was perplexed in the presence of a multiplicity of ministerial samples, they sent for this minister. After they had heard him, they were delighted with the next man that came along. In comparison with his the longest and most tedious sermon was crisp and short. If the gentlemen who follow me seem to be eloquent, if they marshal facts and figures with a masterly skill, if they touch your hearts with pathos, if they make you laugh until your sides ache and the tears come, you must give me some of the credit.

Gentlemen, I bid you welcome to this feast, the best of which is still to be served, in the name of the genial, accomplished, popular president of the Hardware Club, Peter McCartee.

At the conclusion of Mr. Williams' address, which was heartily applauded, the president introduced the first toast of the evening in the following words:

"PATRIOTISM AND PARTISANSHIP."

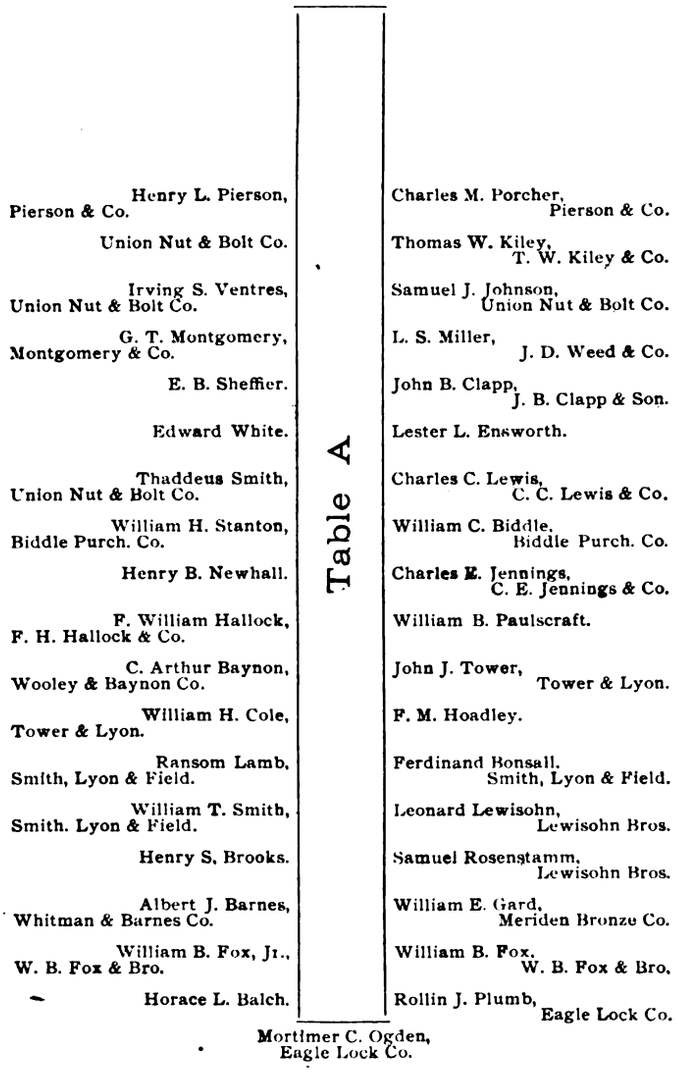


We are honored tonight by the presence of one who comes from a venerable and famous institution of learning, from whose classic halls, during its long history, have passed multitudes of men splendidly equipped for the battle of life, and who have been an honor to the State and to the nation, and I am confident that when the gentleman shall have finished his address to us, that our patriotism will burn like a flame, and our partisanship shall be remitted to the darkest shades of oblivion.

Permit me to introduce to you the Rev. Dr. Stryker, president of Hamilton College.

DR. STYKER'S ADDRESS.

Mr. President and Fellow Citizens: It was a remark which I have seen attributed to Sydney Smith, upon his leave-taking with a departing missionary, "Sir, I hope you will agree with the man that eats you!" It always struck me that the indigestibility of Jonah must have been instructive to that fish whose hospitality was so unsuccessful and so brief. Both the monster and the medicine must have had wiser notions as to quick sails and small prophets.

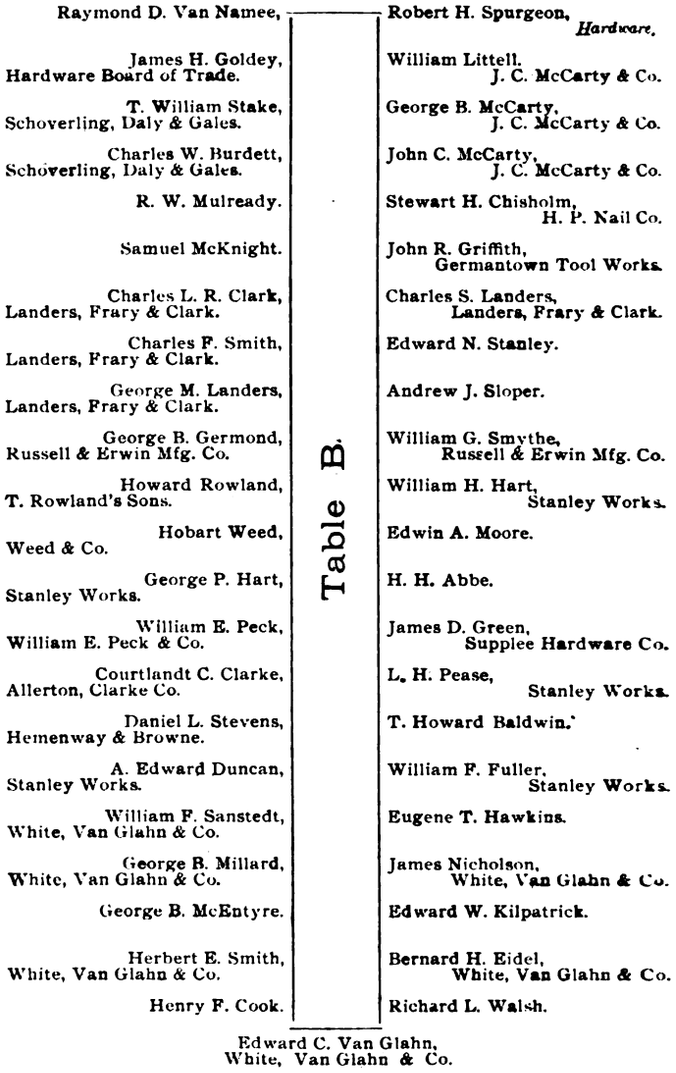


A little while ago I talked behind a table in this city and did not finish until the next day! The presiding officer intimated that I was the last man who should speak that night, and he was right. I began by congratulating those who had already left and then asked leave to print. I would say to my fellow morsels who are so appetizingly displayed at this counter, that I know what it is to hold my thumbs and wonder if there is to be any time left. I am credibly informed that the Holland Society is responsible for first running a dinner with a windmill. The fluidity of the Dutch republic may have much to do with the fluency of which we are now in the habit at several dollars a plate. Men used to take naps as an aid to digestion, now they hear speeches. Let us make the most of it while it lasts. The next thing will be something else. The peerless lay-preacher, who, in his less occupied moments, presides over the only four-track road in America, is one of the chief sponsors for this decade of ventriloquism. All of us can admire where none can emulate his scintillating facility. Not pretending to offer you anything so stimulating in its effervescence, I would try to persuade you that Appollinaris is as good and even better, if you only think so! I am a preacher and a college professor. There are some who are ready to assume that preaching and teaching make a man an impracticable, a spinner of theories without real relation

CHAIRMAN AND GUESTS.

Digitized by Google

to average and actual affairs. If there are those here who think in Mr. Huxley's polite phrase that preaching is "lunar politics," and that a college is a school of cranks, I will not challenge them nor argue the point. I am a man. I am an American. I am a citizen. I trust that I am a Christian. These grounds are solid leverage for my present purpose. From them I speak, and from these I say that he is no true minister who is not evermore busy to show how all desirable good rests in the recognition of ultimate principles, and is not urgent to compel all matters of custom and practice to testify before the grand jury of conscience. And I say again that any college abuses its opportunity if it does not seek to inspire its every student with generous ideals and to base him broad and strong with the conviction that his better training is a holy trust for larger manhood and for the most resolute, intelligent and active citizenship. It is



the human duty of us all, whatever our antecedents, our attainments, or our occupation, to help make this a larger and pleasanter world for every man that is in it. We can only do this as our love steadily becomes more dominant, and as we more and more widen our comprehension of that high relationship in which all men are kin. Not the word my, but "our" begins the Lord's Prayer. The man who prays:

"Lord, bless me and my wife,
My son John and his wife,
Us four and no more, Amen."

that man does not pray at all, and, preaching though it may be, I say that a man who does not pray does not live! In this State, which holds the ashes of John Brown, in this city, which keeps the dust of Alexander Hamilton and of Ulysses Grant, you are assembled in the name of a common business interest. This dinner emphasizes a commonalty and co-operativeness of purpose. I urge that it is what men have in common and not in severalty that fulfils their life. That which unites men is normal, that which sunders them is abnormal. It is not because we are States, but because we are United States that we are a nation. But real union can not be an external device, it must be an inward truth.

In my eagerness to affirm a great principle, as wide as all life, and comprehensive of all human relation, I am aware of my peril of becoming too abstract. An aged woman in Alabama was, with her husband, taking a first ride on the cars. Her wonder and anxiety increased with the speed, until at the height of her astonishment and fear, the train struck a long and high trestle. With a scream the woman bounded to her feet and clutched the seat-back before her. To her trembling obliviousness of all else it seemed that the cars had leaped into space. In a brief moment the train was on terra firma once more. With a happy shout, heard through all the car, she cried: "Thank heaven, she's lit

again!" Gentlemen, if for a little here and there, I seem to you to be in the air, I assure all who have tickets for this trip that I shall try not to leave the rails!

What is partnership? It is identification with a part. A party is a section. To see no more than a part is to ignore the whole. A part is a part only. The sum of parts is the true goal. A part divorced from its fellow parts is a part no longer. Your arm wrenched from its body is not your arm! Parts and parties are means, partnership is the end. The vice of selfishness is in its isolation from a common life. Secession is centrifugal—the atom resenting the universal law of unity. In the heart it is hate, in the life it is war, in essence it is hell. The bane of partnership in whatever realm and to whatever scale is in its arbitrary exclusion of relation. The word idiot is from a Greek adjective meaning selfish. It is an introspection which becomes mental blindness. Individuality, by exaggeration, becomes insanity. Give and take is a law of a balanced life. A year ago

Digitized by Google

Senator John Sherman rose in his place to insist that "measures for the relief of the treasury should be viewed from a higher standpoint than partnership," and he said: "If I were to think of party or party advantage in proposing legislation to protect the government credit, I would be guilty of violating my oath of office." Yes and Amen. But if that be true, where does it not reach? Well may we pray in such days as these, in the words of the Psalm, that God would "teach our senators wisdom" of that sort! In Congress or out of it, he is false to his country who is a partisan first and a patriot afterward. All of us are guilty of a treasonable narrowness who prefer tactics to truth. It is ungenerous and degrading to refuse to recognize the excellences and persistently to impugn the good faith of those who differ from us in their philosophy. The bonds of civil life and of national loyalty are strained and broken when we vituperate our magistrates merely because they did not have the preference of our votes. Two things debauch our politics—one is money, the other is acrimony. We are all of us too much Tillmanized.

As long as we consent to send mere party men and not statesmen, to make our laws, so long will bitterness and sectional advantage override considerations of that weal which ought always to precede the prestige of a clique. We are all too much the constituents of a false theory, and we pay the penalties. A little tyrant, three years old, was kicking and screaming at his nurse. It was on the cars, and the passengers all longed to spank the little autocrat. He wanted a wasp that crept on the window sill. He tried to take it. The nurse caught his hand and said coaxingly; "Harry mustn't touch. Bug bite Harry." Harry screamed savagely and began to kick and pound the nurse. The mother, without opening her eyes or lifting her head, cried out sharply: "Why do you tease that child so, Mary? Let him have what he wants at once." "But, ma'am, it's a——" "Let him have it, I say." Thus encouraged, Harry clutched at the wasp and caught it. The scream that followed brought tears of joy to the passengers' eyes. The mother awoke again. "Mary," she cried, "let him have it." Mary turned in her seat and said, confusedly: "He's got it, ma'am."

"When that we in our viciousness grow hard.
The wise gods seal our eyes, make us adore
Our errors, and strut to our confusion."

The braggart spirit anywhere is absurd. Some little school girls (it is chronicled of Chicago) were discussing their clothes. "I've a lovely new dress," said one, "and I'm going to wear it to church next Sunday." "Pooh!" said another, "I've a new hat, and I'm going to wear it every day." "Well," said a third, "I've got heart disease, anyway!" The two were mute with envy. She was a Populist! Must minorities always be truculent and majorities always be insolent? Yes, while party is put above principle. No, when that infamy ends. Unless one is willing to be a mere political fashionist whose german-silver principles, like those of Bunyan's By-Ends, are at once harmless and profitable, he may not prefer clique to character, and a mean success to an honorable defeat. He must not confuse pro party and pro patria, nor bow and cross himself at the beck of a civil ultra-montanism that would mother devotion by ignorance; but must protest, though he be but one contra mundum, and vote as though it were a sacrament. Better "vote in the air" than vote in the mud! When the air is full it will snow victory. To heed that brazen and bitter cry: "Party, right or wrong," disgraces the soul and sears the vision. Nothing is more immoral, more fatal to personal honor, than to succumb to that social coercion, which has lost most of its terrors for men whose

spines are not bits of wet string—mere boneless marrow, but which has so long ostracized independence, and in the name of Cæsar usurped the things of God. Softening of the back is as deadly as softening of the brain.

"Where none will sweat but for promotion," when demagogues "make nice of no vile hole to stay them up," when legislators are often so notorious that self-respect must pray—"unto their assembly mine honor be not thou united," when "the most upright is as a thorn hedge" (combing wool from every passing sheep) taking toll both ways, while the indirect but debauching bribe of patronage would make office but a carcass for the swiftest vulture, when truth is about to be recrucified between two thieves, no decent man can wash his hands with Pilate and say "I am innocent, see ye to it!"

Of course statesmen like Demetrius, the silversmith,

seeing the craft by which they have their wealth in danger to be set at naught, will raise the specious cry, "Great is Diana!" Honest citizenship will be resisted, claw and tooth, by those "whose mouths (as Lowell said) are filled with the national pudding, or watering in expectation thereof." All the more must it withstand and smite that lust of spoils which would wreck the stateliest cause to make flotsam and jetsam of every public trust from president to poundmaster. The belly of the great machine "teems with armed men!" Left alone within the walls, they will after dark do all their fell intent. In our own Troy, that revolver at the polls, finding its victim, was a danger signal that only deaf souls can forget. Party, at any price, is that which degrades government, and with its malaria poisons us all! The breath of that spirit is pestilence and its touch is corruption.

Must it ever be a task of Sisiphus to rescue the primary from that exploitation by hucksters which makes the individual citizen but a blank proxy? Shall platforms always be mere verbal expedients—a declaration of purposes whose quotation after the polls close is considered to be a roaring farce? Are we always to be fed on platitudes? Is the originating force of these costly campaigns, which ought always to advance the lines of loyal purpose, to lodge in the councils of honest and earnest citizens fairly and freely assembled, or in the back office of self-appointed and power-stealing bosses, who with equal facility slit the throats of cities and blackmail their eitizens? When the primary and the caucus and the convention are cajoled, intimidated, packed, perverted, they cease to become representative, and only rivet the shackles upon those who in their surrender to an insolent arrogation of proprietorship reduce themselves to servility and moral impotence. It is an imprudence that makes the average voter a puppet. Dr. Jekyll becomes Mr. Hyde. The voice is Trilby's, but the song is Svengali's. The auction of the voter is completed in "the sale of law." Moral inertia, Lotus-eating indifference, crass selfishness, a materialistic and mercantile theory of life, these things "tend downwards, justify

REV. M. W. STRYKER, D. D.

despondency, promote rogues, defeat the just," and will as long as voters consent to be done up in express packages and delivered c. o. d. Whoever that possible nominee of 1896 may be whom these steerers are least for, I am most for. How the municipality problem lowers with portent, in all its subordinate details of drunkenness, lechery, bribery, simony, and sleek coupon-cutting apathy. Kill me that last and I will render you the heads of all the rest!

When shall we resist the blackmail and duress of underlings and send truly representative men to the councils of the nation? Think of a State that owned a George William Curtis, that contains a St. Clair McKelway and an Elihu Root, persistently preferring some of the second-rate partisans who have strutted about in the United States Senate! I would that I could make these words strike and detonate like percussion shells! We need unconditional men, indomitable souls, who shall echo to all that would trammel them into mediocrity that word of the cavalier to his mistress—

"I could not love thee, dear, so well,
Loved I not honor more."

Never did a time more need noble leadership. Must we always mock our living prophets, and ever be lamenting a

Digitized by Google

dead Lincoln? Must the witchcraft of foul selfishness always stupefy us with its incantations? Worthy thought will be incarnate in worthy men when we summon such. As yet we do not seek them. We consent to partisan dishonor. All peoples have as good a government and as good governors as they demand, no better. All improvement begins in new convictions. The best things are offered only to the best men. Our theory confronts us with our condition. At present sectionalism and class legislation hold us up at every turn. Localism laughs at the general good. We think that law can repeal arithmetic. A great mob of inflationists cries for more money. By an artifice it would set a fictitious value upon silver and ask the world to believe that 50 cents is 100. At that rate all the silver of the world would come in here by telegram "at our expense." Why not declare that a bushel of wheat is a dollar, that a barrel of oil is two dollars, build elevators and tanks, take the whole product and offer warehouse certificates for these stores as money at this fanciful rate? Money has either an intrinsic value or an extrinsic. These are not to be confused. I do not object to a metal—I object to a ratio that is a lie. "Sixteen to one" is obsolete. To have two values for a dollar is such a fatuity that I feel like the preacher who, standing in the pulpit of a son who had gone daft over ecclesiastical millinery, took for his text, "Lord, have mercy upon my son, for he is a lunatic!" Inflation is balloonacy. A nation which in two supreme crises so grandly determined to be free, shall never blandly consent to be dishonest; which in such a seven-heated furnace learned the sixth commandment and the seventh shall not repudiate the fourth at the bidding of rum, nor the eighth at the bidding of silver mines. At last the tenth shall round into the first, and "Thou shalt not covet" shall touch "Thou shalt have no other God." Happy is the people that is in such a case! How far class envy can go is shown in the artificial provisions of that preposterous inter-state commerce act which at present is prostrating the greatest industry of the land, flinging scores of roads into the hands of receivers, and robbing the incomes of numberless employes and of widows and orphans whose savings are slaughtered. Its provisions are mainly based upon an envious theory which is both sumptuary and socialistic.

But I forgot that I am only a country parson, and I preach too long. I will speak of patriotism. Pater means father, the Patria is the fatherland. Patriotism is brotherhood, and it has no limits. A family that seeks only its own advantage is a curse to a community. A nation that seeks only its own good is a curse to the world, and ultimately to itself. Shall there ever be a truly Christian nation? Does liberty only mean "our liberty?" If the ethics of the gospel are not fit to be national, they are not fit to be personal. But how many nations have learned the ten commandments, let alone the beatitudes? Patriotism is but a geographical partisanship if its ideals are unfraternal to mankind. Too many in their handling of that word illustrate what the recent *Century* has described as "the effect of a large idea upon a small mind." "Make me pure," prayed a little girl; "make me pure as baking powder." We have lately been discussing the merits of Royal baking powder and Cleveland's. But the question which of these contains the least alum and the most force is not so important as that we should seek to have all the world join us at the knees of God in that petition: "Give us this day our daily bread!" Partisanship is sectional. Patriotism is national; nay, it is international. Whatever may be my secondary and subordinate relations, primarily I am a man. Anything less than the whole cause of mankind is secession from God.

"The peoples, Lord, the peoples,
Not thrones and crowns, but men."

"Have we not all one father?" As patriotism is above party, so is humanity above diplomacy. "Let not thy country (said fine old Sir Thomas Browne)—let not the law of thy country be the non-ultra of thine honesty." (R. M., p. 185.) What are the questions of Venezuela and the Suez Canal, what is even the harsh question of Cuba, by the side of the world disgrace over Armenia!

Thank God the American protest has been made. Shame to England that her tumescent Lord Salisbury passes by on the other side. Shame to all alleged Christian nations that there is not a new crusade to abolish that hideous and piratical power whose cimetar is the corrolary of its Koran. Oh, for another Cromwell, Peter the Hermit, Charles Martel, to smite utterly this cruel absolution. Oh, for another Cœur de Lion. What is an empty sepulchre whence the Lord of Life is risen to the perishing thousands for whom he came! God of armies, bare thy holy arm against that livid, curdled and putrescent misgovernment that sets its crescent above the city of Constantine and seduces nations to forget that watchword of the cross, "In hoc signo vinces." How can any sneer at the brave words from Washington that invite a new holy alliance against that malign despotism? There might be a thanksgiving dinner of the world if Russia and England would cease their flatulent haggling over the wishbone! I for one am grateful for that pertinent apothegm of the *Brooklyn Eagle*—it was indeed Eagle-eyed—"What is fundamentally right is also profoundly wise!" Oh, the cowardice of the ledger and the bank book—"letting I dare not wait upon I would!" It refills a religious cult, emptied of Christianity, with that old exclusive provincialism which slew Christ, and makes his house of prayer for all nations into a stock exchange.

Gentlemen, America is providential. She is adapted to be the almoner and arbiter of nations. Let us interpret destiny by duty, and honor by service, and opportunity by responsibility, and so—

"Set up a mark of everlasting light
Above the howling senses ebb and flow,"

that we shall enter into the task and so alone into the triumph of the Son of Man! Vox recti populi, vox Dei.

Let us lift the non-partisan, the truly patriotic standard both of national righteousness and of a world-wide sympathy of the true partnership of man under the paternity of the one God. Let Rome stand for force and statute, Greece for culture, Germany for learning, France for art, England for diplomacy and aggrandizement, all these for war, and we, in God's name, for character, for international and super-political justice, for real freedom, and for the ever-nearer dominion of the Prince of Peace.

Domain, ancestry, heritage, however much, we are not merely to follow, but to fulfil our fathers, "God having provided some better things for us, that they without us should not be made perfect!"

Dr. Stryker's admirable and patriotic address was listened to with the closest attention from beginning to end, and he was compelled to suspend his speech at a number of points, until the applause in endorsement of his ideas had died away.

WORD FROM THE ABSENT.

The president then read the following dispatch, which, he said, had just been received that afternoon:

"BUENOS AYRES, February 20, 1896.

"Peter McCartee, President of the Hardware Club: A thoroughly enjoyable and successful evening is the wish of one who, though far away, is with you in spirit.

"J. L. VARICK."

Mr. Varick, it is needless to say, is the popular secretary of the club. If he could have heard, in his far-distant stopping place, the cheers with which his good wishes were answered, a flush of pleasure would have mantled his attractive features, and that heart of his, which is always beating with goodwill for his fellow man, would

Digitized by Google

have slipped a cog, and increased its number of pulsations in an alarming degree.

Mr. Bushnell, who is always in demand at the Hardware dinners, was next introduced, and by request favored the audience with that old standby which he has always so magnificently rendered, "Rocked in the Cradle of the Deep." Of course the audience would not permit him to be seated with one attempt, and it was also a matter of course that he should respond with that other favorite which the Hardwaremen always demand from him—that old German drinking song, "Down Deep Within a Cellar."

President McCartee introduced the next speaker in the following felicitous manner:

"OUR NATIONAL PROGRESS."

The subject of this toast is so immense in magnitude and scope, that any remarks from me would be superfluous, in the presence of the able and distinguished gentleman who will respond to it. Allow me to introduce to you Mr. James H. Hoyt, of Cleveland, and the next Governor of Ohio.

Mr. Hoyt certainly had no occasion to comment upon the lack of cordiality on the part of New York, where his fame

HON. JAMES H. HOYT.

as an original after-dinner speaker, and a genial all-around friend to everybody, had preceded him. He was received with a round of applause, and his speech was interrupted a great many times by a repetition of the same marks of favor. He was listened to closely, and his very strong argument in favor of America and American interests, made a marked impression upon all present, and when he had finished, each man felt more proud than ever that he had been born in the land of the Stars and Stripes. Mr. Hoyt said:

HON. JAMES H. HOYT'S ADDRESS.

In comparison with the thrilling and inspiring story told in the census of the United States, the tales of the "Arabian Nights" even become tame and uninteresting. In the short life of the great republic there has been more of substantial and magnificent achievement; more of startling and bewildering transition; more of sudden and yet solid growth, than Queen Scheherezade, with even her Oriental and opulent imagination ever dreamed of. We are all Aladdins and have our Genii, quick and willing in service and mighty in performance. A resident of Chicago rings a bell and straightway his friend in New York whispers in his ear. One in Cleveland writes a note and in a few moments his familiar, and perhaps illegible, handwriting is scanned by his correspondent in distant Boston. That which lurks in the innermost and shyest recesses of one's being is exposed by the aid of the cathode ray. Death lays his paralyzing hand on the lips of a loved one; but a lever is moved and the dear voice speaks to us again. An electrical device, with an accuracy that never fails and with an energy that never tires, does our counting for us. A type-setting machine, with an almost human intelligence and with a superhuman exactness, does the work of a score of printers. There is a hum and a roar, and a huge roll of blank paper is transformed into thousands of chronicles of the world's daily doings; all printed and illustrated and pasted and folded by machinery. Every day we are enlightened with information gathered from the remote corners of the earth. Africa is just around the corner, and the Ultima Thule is but across the way. We listen to the gossip of the Vatican. We are thrilled by the excitements of the great commercial exchanges, where fortunes are made or lost in an hour. We hear the debates in legislative chambers. We are told of the conclusions of prime ministers, and share in the counsels of cabinets. If a queen weeps, in a few hours the humblest citizen knows the cause of her sorrow and can sympathize with her. If a kaiser has a colic at midnight, we know the next morning just when the mustard plaster was laid upon the august abdomen by the imperial physician and when the internal was exchanged for an external pang. Every morning all that is new or interesting or instructive, and much that is horrible, lies before us on the breakfast table. The man who is not intelligent in this year of our Lord is so for lack of inclination and not for lack of opportunity. The very foundations of the earth are shaken by the pulsations of the mighty mechanisms that do our bidding and render us essential service. What were luxuries a little time ago are now necessities. A thousand devices minister to our comfort and convenience. Space is annihilated and the whole world is joined in one mad race against time. We no longer walk, but ride bicycles. We are quickly carried in electric cars. We can enter a carriage, and, by turning a wheel, take an airing without a fear that our steed will get his tail over the lines.

"That which is now a horse, even with a thought,
The rack dislimns and makes it indistinct."

The miracles of yesterday have become the commonplaces of to-day. What has happened we know not; but what will happen, who can tell? This is no time for skepticism, for all things seem possible. The world owes more to American inventors than to those of any other nation, and our amazing progress has in large measure been due to their tireless efforts and clear brains. The producer is a benefactor.

But, again, in a hundred years, the thirteen original States have multiplied into forty-five, and the aggregate of their population has swelled from three million to a grand total of nearly seventy millions. There are very few drones in our national bee-hive. Nearly one third of all our people are engaged in what the statisticians call the gainful occupations. In ten short decades, from a community of farmers, we have become the greatest manufacturing nation on the globe, and a manufacturing nation means an independent nation. Thanks to the stimulus of a protective tariff, our industries have become diversified. In 1890, we had two millions more active workers than we did in 1880, and in that same year we paid out in wages, in round numbers, thirteen hundred millions of dollars more than we did at the beginning of the decade. This is an age of iron and steel, and we rank first among the iron and steel making countries of the world. In 1890, we produced over thirty-four per cent. of the world's entire product, and in the same year Great Britain, our sharpest competitor, manufactured only

Digitized by Google

a little over twenty-nine per cent. The star of the Republic is waxing, while that of her great rival is waning.

But, again, the United States of America is first in agriculture. She not only feeds her vast army of consumers, but has a mighty surplus to send to the hungry of other lands. Valuable as are her manufacturing interests, her agricultural interests must not be disregarded or forgotten, for that was a wise notion which Gulliver, the Brobdingnagian, entertained:

"And he gave it for his opinion that whoever could make two ears of corn or two blades of grass to grow upon a spot of ground where only one grew before would deserve better of mankind, and do more essential service to his country, than the whole race of politicians put together."

We may confidently expect that we shall some time wrest from England her supremacy on the seas and that the stars and stripes will float again in every port. In 1892, the year before the financial cyclone struck us, we built in America ships with a total capacity of three hundred and fifty thousand tons, a far greater tonnage than England built that year. Vessel building on the Great Lakes has received a tremendous impetus. Our shipyards are now engaged in the construction of vessels with a capacity in the aggregate of more than sixty thousand tons. The city of Cleveland is the largest ship building center in the United States. May the day not be far distant when America is mistress of the seas.

The progress of the Republic in power and in glory has excited not only the wonder, but the despair of the Old World—its wonder, because our people, whether native or foreign born, strengthened by the elixir of freedom, stride farther in decades than other peoples do in centuries; its despair, because the success of this Government has sounded the knell of despotism, threatened the destruction of hereditary privileges, and shaken the throne of every monarch in Europe. Thinking men abroad are beginning to simply endure sovereigns, rather than to adore them. The worship of royalty is no longer in fashion, except, I regret to say, among a few Anglo-maniacs in America. The doctrine of the divine right of kings is well nigh forgotten, and the grander, truer notion of the divine right of the people has taken its place. It was only little more than a century ago that the flag of the infant republic, founded on the then untried and unproved principle of man's equality before the law, was first flung falteringly to the breeze. It was a banner then of hope and not of glad assurance, of promise and not of fulfillment; it was an emblem of an untried, unknown future, and not of a safe and glorious past. But, to-day, it represents far more than an inspiration, however lofty. It waves now, thank God, for a fact, great, inspiring, immutable, incontrovertible. While and wherever it floats, the grand truth that the plain people can be trusted to govern themselves cannot be denied, because in one short century the government they have established and maintained has become the most powerful of all.

A man once came home in a very ugly frame of mind and began kicking the furniture and generally upsetting things. His wife said to him, "My dear, what can be the matter?" "Brown called me a liar," he replied." "Well, my dear," said his wife soothingly, "never mind; of course Mr. Brown cannot prove it." "But he has proved it," angrily answered her husband, "and that's what makes me mad."

Proof is sometimes extremely disconcerting and, indeed, disheartening. Those who foretold the early downfall of the Republic have been answered by the inexorable logic of events. The Government of the United States has firmly withstood shocks which would have overthrown empires and demolished thrones. Each decade has made its history more glorious. Through four long years of strenuous civil strife its flag was borne aloft and, at the end, floated undimmed by the loss of a single star. When Lincoln, the greatest and most beloved of leaders, was untimely stricken down; when the lamented Garfield was assassinated, their constitutional successors took up their interrupted tasks without so much as an objection. A disputed presidential election was settled by a peaceful tribunal. As the Republic has withstood so much, it may reasonably be expected to yet withstand. Because of what it has endured, we can hopefully believe it will still endure. In every darkest hour its patriotic citizens can confidently exclaim, with the eloquent and lamented Ohioan, "God reigns, and the Government at Washington still lives."

The stability of the Republic is more significant and remarkable when we consider the varied and apparently heterogeneous elements entering into our national life. You remember what the poet says,—

> "America! half brother of the world,
> With something good and bad of every land."

Our country embraces within its borders people of divergent environments, of diverse pursuits, of different nationalities, and those who are subjected to climatic influences as powerful as they are unlike. It might almost be said that we Americans are representatives of different nations, and yet, in a very broad sense and in a very real sense, we also represent one common country. Some have been born under the brilliant skies, in the fragrant atmosphere and amidst the rich vegetation of the tropics; others in colder regions, less fertile perhaps, and where Nature is less bounteous; others still on the bleak hillsides farther north, in New England for example, where vegetation is so meagre that, if rumor be correct, those who dwell there are obliged to file down the noses of the sheep even in order that they may pick out the scanty blades of grass struggling for light and air between the granite boulders. Some dwell in teeming, populous cities; others in virgin regions, the wealth and development of which are all prospective, the history of which is told only by the solemn whisperings of the forest primeval, written only on the scarred faces of the mountains and on the swelling bosoms of the trackless plains. Some live under warm, some under neutral, some under cold, skies; some in climates equable, constant and favorable; others in climates capricious and inconstant. Some are Catholic and some are Protestant. One speaks in vivacious French, another in liquid Italian, another in musical Spanish, another in the more resounding German, another in harsh yet vigorous English, and another in that English, enriched and softened by a touch of the brogue. Tillers of the soil, delvers in mines, workers in mills and factories; all the various pursuits of life, "all sorts and conditions of men," are represented here. The civilization of America is composite; its national life is a mosaic. In it can be traced the stateliness of Spain, the versatility of France, the persistence of Germany, the thrift of Holland, the impulsiveness of Italy, the sturdy endurance of the Anglo-Saxon, the courage, the wit, the dash, the fire, of Ireland. Yes, there are truly differences between us citizens of America; but these very differences, so marked, of soil, of climate, of religion, of language, of pursuit, of descent, of characteristics, somehow do not tend to divide or separate us, but to unite us the more closely rather, since they all help us to realize the vastness of our common domain, the grandeur of our common present, the dazzling possibilities of our common future. But these differences emphasize, also, the truth of the great principle of equal rights on which this government is founded. It is because of this controlling principle that people so diverse are so firmly bound together. We may dispute sometimes among ourselves, but we will brook no interference from an outsider. We Americans respect our rulers, because we ourselves make and unmake them. We obey the laws, because we enact them, and our servants

Digitized by Google

enforce them. The Republic of America is stable, because—

"Broad, based upon her people's will."

We revere the constitution, because we, the people of the United States, adopted it, and because it was so adopted, among other things, in order "to secure the blessings of liberty to ourselves and our posterity." It is indeed true, as the poet has it,—

"Time's noblest offspring is the last."

Mr. McCartee then introduced Hon. Horace Russell as follows:

"POLITICS AND BUSINESS."

I know nothing about politics, and many of my friends here to-night may say that I know very little about business, but I have the honor of knowing Judge Russell, who has been an able and an upright judge; he is an honored and valued member of the Hardware Club, and the best introduction that he can have to this company is his own

HON. HORACE RUSSELL.

charming and genial personality. Gentlemen, the Honorable Horace Russell.

HON HORACE RUSSELL'S REMARKS.

Judge Russell's response was as follows:

Mr. President and Gentlemen: First of all, permit me to make my grateful acknowledgments for the honor you did me in electing me a member of the Hardware Club. In few relations of life have I found more pleasure, and in none more comfort. Though not, strictly speaking, engaged in the Hardware trade, I still have a qualification—not to say qualifications—for membership. It constitutes the chief foundation for whatever credit I have among men, though I do not schedule it in my inventory. The fact is, I carry the stock over from year to year.

You must allow me, too, my fellow members, to congratulate you on the phenomenal success of the Hardware Club. One of the very youngest, it is already one of the strongest and most securely established of New York clubs. While we are willing to concede—rather than have a fuss about it—that its success is primarily due to its splendid membership, I know I have the authority to acknowledge, and with profound gratitude, that it is largely due to the good judgment and efficient management of the Board of Governors. We all take off our hats to President McCartee to-night, and make him and his fellow officers our best obeisance. And before I proceed to the discussion of the meaty subject to which you have assigned me, I pause long enough to express our obligation to Van Glahn, Bissell and the other members of the committee for all the pains and trouble they have taken to get up this banquet, and to assure them it has left nothing to be desired. May I not express the hope that this and similar banquets shall bring the trade together in a strong guild, and demonstrate that good fellowship can overcome and survive the rivalries and jealousies of competition?

"POLITICS AND BUSINESS."

That is a pretty comprehensive subject, about which one could talk almost as long as Senator Morgan spoke at the New England dinner, without exhausting it. You will not expect me to pitch what I have to say in anything like so high a key as did President Stryker. Few persons could do that; I least of all. If he can fill the minds and hearts of his students up at Hamilton with such lofty ideals, he will have done much to make them honorable men and useful citizens; and if his addresses to them are as entertaining and invigorating as that to which we have listened to-night, they must be dullards indeed if they do not absorb great and permanent good from his instruction.

We usually mean by the word "business" that occupation by which a man makes money, and takes care of his family and those dependent upon him. It is the principal concern of life to most—to nearly all—of us. Touch a man in his pocket, and you hit pretty near his heart. The conditions of life, and the world into which we are born, make it so. Naked came we into this world, and if we have anything to wear, or eat or drink, we have to get out and hustle for it. That is business. Considering how short a time we have to live here, and how long in the world to come, it seems as if we ought to be able to employ all our time here in preparation for the life to come. But the Lord has not so willed. We must attend to business, pretty nearly all the time, and our minds must be occupied with the things that affect business.

It looks now as if politics were likely to be the business—at any rate the only active business—of the next ten months. Presidential years are proverbially bad for trade. Not only are we engrossed in the heat of partisanship, but doubts as to what the future may bring forth disturb confidence and impair business. The only consolation you have is that of the farmer who, when a passerby expressed sympathy with him because his corn crop was so poor, said: "Wall, I thank God my neighbor's ain't no better." Politics must always be a necessary part of the business of every citizen of a republican State; and every business man, whether he wills it or not, whether he knows it or not, is in it. Under all forms of government the prosperity of the people is largely dependent on the conduct of the State. That is one of the necessary conditions of organized society. We are bound up together, and the good or ill of all is the good or ill of each. But under no form of government so much as under one like ours, where every citizen is a sovereign, and where the united efforts of all are necessary to keep the old ship on an even keel and steered for the right port.

Bad government makes bad business. When the public credit is gone or doubtful, private credit does not long survive. The destruction of mercantile credits is, for the time being, at least, the destruction of profitable business. We have had recent proof of this. When wars and rumors of wars fill the air, however causeless and senseless, there is at once a paralysis of business. We have had recent proof of this, too. This is one of the reasons why business men are always a conservative force, perhaps the greatest conservative force, and why they are strongly in favor of peace and law and order. I hope it may be said their common patriotism is another. It certainly can be truthfully said that whenever serious peril threatens the country, no class of citizens are more ready to spring to its defence, and spend

Digitized by Google

their all, their energies, their money and their blood, than the merchants.

It is the habit of many well-meaning men to regret that we give so much of our time to politics. "Happy is that country which is without a history," is a paraphrase of a saying of Montaigne that has passed into the currency of a proverb, meaning, I suppose, a country at peace with the rest of the world, and one whose domestic government is so well and peacefully conducted as to permit the people to devote themselves to the private concerns of life. It is enough to say, however, that that is not this country, nor likely to be in the lifetime of any one of us. Eternal vigilance is still the price of liberty, and it seems to be the price of everything else worth having. Vital questions crowd the present as they have the past; they will crowd the future as they do the present. As long as men have anything which of right belongs to them worth keeping, there will be other men trying to get it away, whether it be liberty, or property, or the pursuit of happiness. It is just as necessary to stand firmly for honest money now, as it was to pitch the tea into Boston Harbor a hundred years ago. It is just as necessary to resist the tyranny of political bosses to-day as it once was that of George III. Degeneration follows torpor just as certainly as death follows heart-failure. Every year some new craze is invented by demagogues or discontents—greenbackism, grangerism; populism, jingoism—and every year it is just as necessary for the conservative element, the business men of the country, to set their foot on it.

A friend of mine happened to be in Paris at the time the Germans were thundering at the gates of the city. Walking along the street one day, he observed a tradesman standing complacently in the door of his shop. By way of making conversation, my friend asked him if he was not alarmed at the state of affairs. "Me!" he replied. "No, Monsieur, it does not concern me; I am not a politician." You have heard of that profane philosopher who said he did not care a damn what happened, so long as it did not happen to him. The difficulty is, that whatever happens to the State does happen to us We may be slow in finding it out, but we do find it out in the end, and then, sometimes, we have to pay a fearful price for our indifference to the public weal.

If what I have been saying has any force at all, it is to show that, in this country, at least, it is impossible to divorce politics from business, or business from politics. In politics there will, of course, be partisanship. There will be times when partisanship will be the highest patriotism, and there will be times when it will not. If our partisanship can be elevated to the splendid plane of patriotism depicted by Dr. Stryker, so much the better. Yet even partisanship which is nothing else but partisanship is preferable to apathy and cowardice, though it must be admitted it is a choice between two evils.

A gentleman whose name is frequently mentioned in connection with the Presidency, once said, in reply to a question: "A statesman is a politician who is dead; a politician is a statesman who is alive." There was more wit than truth in the remark. It could be properly classified with that old adage. "*De mortuis nil nisi bonum*," a phrase which is never invoked except to protect the memory of a scoundrel. An honest man does not need it. A Yankee once said: "All deacons is good, but there's odds in deacons." There are odds in politicians. There are those who regard politics as a profession, with high ideals of the public good, and honorable ambitions to serve it. And there are those whose only idea it is to get themselves into places which they are in nowise fit to fill. Whether vanity or cupidity is the inspiring motive makes no difference. This latter class put too much business into politics, and unfortunately they do not carry into it the business adage that "Honesty is the best policy." The worst of all public enemies in modern days is the man who is in politics for what he can make out of it. He is to be found in both parties numerously. I name no names. I make no personal application. The amenities of this occasion forbid it. I will be more discreet than a certain member of a social poker party. There was a one-eyed man in the party whom a member thought he detected cheating. At the end of a hand he said: "There is cheating at this table. I name no name, but if I catch him at it again, I will knock out his other eye." These men disgust the average business man into the inclination to have nothing to do with politics whatever. It certainly is not calculated to inflame one's zeal to know that, while the people elect, the politicians nominate, and that many times our only choice in voting for public officers is between our—scoundrels and the other—scoundrels. A New York primary in most of the districts is not exactly "a land of pure delight where saints immortal reign." It is not a pleasant matter for contemplation to see the leaders of the great political parties unwilling to do or have done that which is best for the country, for fear the other party will get the credit for it and make capital out of it in the next campaign. Nor is it

GEN. JAMES R. O'BEIRNE.

calculated to fan our enthusiasm into a flame to know, as we do, that one of its first results, if we succeed, is likely to be to use as capital for some self-constituted boss to secure the office which we do not want him to have. But, after all, gentlemen, these phenomena are only incidental and ephemeral. The things that are permanent remain. These are only surface indications, spots on the sun. The world is moving on; history is being made whose deeps are scarcely stirred by these things on the surface.

"For humanity sweeps onward;
Where to-day the martyr stands,
On the morrow crouches Judas
With the money in his hands.
Far in front, the cross stands ready,
And the crackling faggots burn,
While the hooting mob of yesterday
In silent awe return,
To glean up the scattered ashes
Into history's golden urn."

Every condition of our existence, every condition of our business, demands that we should take an interest, an active interest, in politics. Let us not be deterred by these little discouragements, not because it is not ours "the applause of listening senates to command." Let each man do his political duty day by day, if he can, on the plane of

Digitized by Google

the highest patriotism; if not that, then, at least on the plane of intelligent self-interest. If we only do that, each man meeting the emergency as it arises, leading the life of a good citizen, taking care of his family and those dependent upon him, and giving to the State as much as he can give, we shall come pretty near having as good a government as it is in the nature of unregenerate man to provide or deserve.

When the cheers which greeted this speech had died away, Mr. Bushnell was again called upon, and gave "The Two Grenadiers."

The president next introduced the last speaker of the evening as follows:

REMINISCENCES.

When we iisten to the talk of a veteran soldier, we expect reminiscences, and to hear of sieges, stratagems and spoils, and how the bauble, reputation, is to be won at the cannon's mouth. General O'Beirne is full of memories of his past life. He stood by his country in her hour of need and peril, he served more than four years in the Union army, and was wounded three times in one battle; he has held other high offices under the government. The reminiscences of such a man will be full of interest to all of us. General O'Beirne.

GEN. O'BEIRNE'S RESPONSE.

Despite President McCartee's promise in regard to reminiscences of war and memories of the field, Gen. O'Beirne followed an entirely different line of thought in his address. He referred to the past history of New York, and called attention to a number of points of interest in connection therewith.

With the conclusion of Gen. O'Beirne's entertaining address, the president announced that the festivities of the evening were ended, and dismissed the audience with that happy quotation from Tiny Tim: "God bless us every one." This wish found an echo in the heart of every man present; and as the guests filed out, in the small hours of the night, into the wintry air, they felt that Hardware Annual Dinners were successful beyond question, and that indeed it had been good for them to be there.

It is needless to say that all arrangements had been looked after in a most admirable manner; and once again, Chairman A. D. Clinch, who has become a recognized expert in the matter of dinners, covered himself with glory; and, not to make an invidious distinction, it may be said that a portion of this light shines also to the credit of his associates in the dinner committee, and among the governors and officers of the club.

THE RECEPTION BADGES.

Especial mention should be made of the artistic badges worn by the president, the chairman of the dinner committee, and the governors of the Hardware Club, who acted as a committee of reception. These were of white silk, artistically crossed, with a bow knot above, and marked in gold with the special office of the wearer, and date of the dinner. At the risk of provoking the ire of the chairman of the dinner committee, it is but fitting that credit for these beautifully wrought specimens of artistic work should be given to Mrs. A. D. Clinch, who also upon previous occasions has made these dinners more attractive by like deft and thoughtful work.

A valued subscriber to *Hardware* would be pleased to receive the address of concerns that make a specialty of fitting up woodwork for Hardware stores. Can any one accommodate him? Letters sent to *Hardware*, No. 143 Chambers Street, New York, will be forwarded.

The Berlin Iron Bridge Co., East Berlin, Conn., have contract for a steel floor to be placed in one of the buildings of the Alexander Smith & Sons Carpet Factory, at Yonkers, N. Y.

The "New Store" Announcement.

A new store is to be opened on March 2nd, in Collinwood, Ohio, a suburb of Cleveland. Two practical Hardwaremen are its proprietors, and they have made their announcement to the public in a plain, modest, and direct circular, that cannot but have its effect upon the Collinwood public. They have leased the handsomest store room to be found in the town, and have fitted it up artistically in natural woods. Their stock of goods is to be new throughout. We quote their advance circular, as in many respect, a model of its kind, as follows:

NEW HARDWARE STORE.

On the second of March we shall open a Hardware store in Collinwood, in the Gunn Block, corner of Collamer Avenue and Manchester Street. Our stock will be all new goods, of latest patterns and styles, and the prices we shall put upon the various articles will be as low as goods of equal quality can be sold. We shall aim to keep everything in the Hardware and tin line that the people of Collinwood and vicinity need, and shall try to deserve their patronage by giving them the best of service.

In our jobbing department we have skilled workmen, and can give satisfaction both as tinners and plumbers, at a fair cost to our customers.

Both the members of our firm are well informed Hardwaremen. Mr. H. B. McGrath comes from the W. Bingham Co., of Cleveland, for whom he has been a traveling salesman. Mr. H. J. Palmitier is a resident of Collinwood, where he has for many years been engaged in the Hardware business, and will make his acquaintance with the people and their needs of value in the new concern.

Collinwood, Ohio. McGRATH & PALMITIER.

This list shows partially the scope of our business, though there are many goods carried not mentioned:

HARDWARE.
- Builders' Hardware.
- Carpenters' Tools.
- Blacksmiths' Tools.
- Screen Doors and Windows.
- Lawn Mowers.
- Wheelbarrows.
- Forks, Rakes, Hoes, etc.

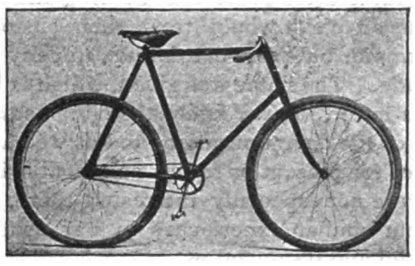
CUTLERY.
- Pocket Knives.
- Table Knives and Forks.
- Spoons.
- Scissors and Shears.
- Carvers.
- Razors, Strops and Hones.
- Revolvers and Ammunition.

HOUSE-FURNISHING GOODS.
- Pressed and Pieced Tinware.
- Japanned and Nickel-Plated Ware.
- Granite Ware.
- Cooking Utensils of all kinds.
- Refrigerators.
- Ice Cream Freezers, etc.

STOVES.
- Heating.
- Cooking.
- Steel Ranges.
- Gasoline and Oil.

PAINTERS' MATERIAL.
- Paints.
- Oils.
- Brushes.
- Varnishes.
- Dryer.
- Putty.
- Glass.
- Glaziers' Points and Putty Knives.

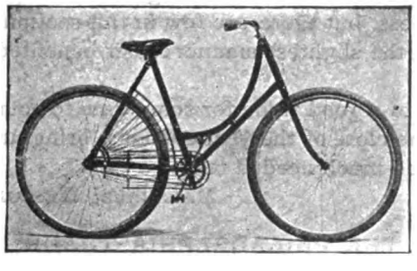
Digitized by Google



PLUMBING AND STEAM FITTING.
ROOFING AND SPOUTING.

We are fitted for doing any work of the kind that will be needed in Collinwood, and at less cost than any firm not on the ground can afford to do it.

THE BEST GOODS,
THE BEST WORK
at the
RIGHT
PRICE.



Empire Cycles for 1896.

The illustrations herewith represent two of the models offered by the Empire Cycle Co., Syracuse, N. Y., for the season of 1896. The following are the specifications for the same: Model 10—"Frame made from best quality, seamless steel tubing, sheet steel connections. Drop-forged crank hangers. Drop-forged fork crown. 10-inch

ball bearing steering head. 28-inch wheels. 1⅝-inch Vim hose pipe tires. Rock elm wood rims, handsomely enameled in Nile green. Cold swaged steel tangent spokes, tied, 28 to front and 32 to rear wheel. Empire tool steel ball bearings all around. Cranks made from best quality crank steel. Width of tread, 5 inches. Choice of rubber or rat-trap pedals. Up-rolled or drop-curved handle bar. Tubular seat post, straight or T style. Empire saddle. Finish—handsome black enamel, with Nile green rims. Scale weight, 23 pounds. Tool bag containing all the necessary accessories. Options: 24 to 26-inch frame; 64, 68 or 72-inch gear. Choice of Palmer or Vim tires."

Empire, ladies—"Frame made from best quality, seamless steel tubing, with sheet steel connections. Drop-forged crank hanger. Drop-forged fork crown. 10-inch ball bearing head. 28-inch wheels. 1⅝-inch Vim hose pipe tires.

Rock elm wood rims, handsomely enameled in Nile green. Cold swaged steel tangent spokes, tied, 28 to front and 32 to rear wheel. Empire tool steel ball bearings all around. Cranks made from best quality of crank steel. Width of tread, 5 inches. Ladies' rubber pedals. Up-rolled handle bar. Tubular seat post. Empire saddle. Finish—Handsome black enamel, with Nile green rims. Scale weight, 23 pounds. Tool bag containing all necessary accessories."

At the annual meeting of the Warren (Ohio) Hardware Co., the following directors were elected: Isaac Kirk, H. C. Bradley, W. S. Kernohan, W. De P. Knowlton, H. C. Christy, Jno. C. Shook, Wm. Wallace, Geo. P. Hunter and F. E. Caldwell; President H. C. Christy, Vice-President Isaac Kirk, Manager Jno. C. Shook, Secretary and Treasurer F. E. Caldwell, Executive Committee Wm. Wallace, H. C. Christy, Jno. C. Shook. A prosperous business was transacted during the year, and a dividend of six per cent. was declared.

Review of the Markets.

Hardware: The jobbers show no inclination to purchase largely, but confine themselves to small and well assorted orders, anticipating only their early wants. The volume of business consequently shows an increase. Orders for goods for next season are being placed. A better feeling prevades the market and the outlook for trade seems greatly improved.

Wire Nails: Prices will remain unchanged till March 1st, when the advance of fifteen cents goes into effect. The advance was made to show that the association controlled the market, and also to force jobbers to anticipate their wants. It is generally expected by the manufacturers that the jobbers will place their orders during the latter part of February, but as they adopted a holding-off attitude, the association thought that an advance would bring in orders. The desired effect has been brought about and business shows a considerable increase in volume. The Nail manufacturers still pursue the course of guaranteeing prices to the jobbers. We quote as follows: Carload lots, $2.25, base, per keg, f. o. b., Pittsburg; less than carload lots, $2.35, base, Pittsburg. On direct shipments on contracts in less than carload lots of 24,000 pounds of Nails an extra 5 cents per 100 pounds will be charged. To jobbers taking of one mill within one calendar month 500 kegs or more a rebate of 5 cents per keg will be allowed. New York prices are: Carload lots on dock, $2.43; small lots from store, $2.53.

Cut Nails: The condition of the Cut Nail market is similar to that of Wire Nails. The same advance of 15 cents per keg will take effect on March 1st. During the balance of February prices will remain the same. There is an active demand for Cut Nails. Quotations are as follows: $2 per keg, base, f. o. b., Pittsburg. New York quotations are: Carload lots on dock, $2.18; small lots on dock, $2.28, and small lots out of store, $2.30.

Linseed Oil: The following are the New York quotations for fine Linseed Oil: American raw, 41 cents per gallon; American boiled, 44 cents per gallon, and Calcutta raw, 52 cents per gallon.

White Lead, Red Lead and Litharge: White Lead, dry or in Oil, Red Lead and Litharge in kegs: In lots of less than 500 lbs., 5¼c. net; in lots of 500 lbs. and over, 5¼c; Red Lead and Litharge in barrels and half barrels, ¼c. per lb. less than price in kegs.

Putty: In the better grades the quotations are $1.40@$2.25, as to seller, quantity and style of packing.

Window Glass: Quotations are 70@70 and 5 per cent. off on French, and 70 and 10@75 per cent. on American.

Clapp & Co., bankers and brokers, New York, in their weekly letter say: "We perceive scarcely any evidence that the bond sales were designed to be or were a popular loan. The Deutsche bank and foreign takings secured nearly ¼ of the hundred million loan. The Morgan syndicate secured about one-third the loan at minimum prices. Capitalists and corporations took about one-third, small banks and investors got a few, and the middle clasess and masses the crumbs, at full prices, the aggregate issue bringing about 6 per cent. more than the single syndicates did. This is ample proof of the people's loyalty when given half a chance. Withal it furnishes much loyal thought, and will show where gold was in hiding, and show officials and foreigners that Americans can sustain their own credit if given a chance to think and act rather than be dictated to."

THE CLEVELAND TRADE.

During the past two weeks trade has shown a very material improvement. The issue of bonds by the government, and the strong bidding on the part of the people for them, has given a tone of confidence to the business community that was lacking before. Its results are bound to be shown by business during the next few months, as in

Digitized by Google

our opinion nothing but the reestablishing of confidence is now lacking to the return of good business conditions all over the country.

Wire Nails have been in active demand, owing to the intended advance in prices on March 1st, and we have no doubt that very large purchases will be made by the trade prior to that time, in the hope of reaping the benefit arising from the advance.

Smooth and Barbed Wire, also, are moving very freely, although at prices that are not remunerative either to the manufacturer or to the jobber. It is difficult to tell how long this condition of affairs will last, but there does not seem any present prospect of improvement. Wire Cloth is still in the same condition as has ruled for the past month or six weeks. Poultry Netting is firm in price, and selling in good quantities for later delivery. All seasonable goods are receiving their share of inquiry, and many orders are now being placed which have been held back until the last moment.

Steel goods, Scythes and Snaths, are notably in smaller demand than is customary, owing to the fact that the stocks in the hands of retail dealers are larger than common. Past experience shows that this class of goods usually move in satisfactory volume every season, the only difference being that in some seasons orders are given early, while in others they come late.

Bicycles are still in good demand, and many requests are received from customers to ship earlier than they had formerly selected as their date. This is an indication that the inquiry and interest in Bicycles on the part of riders is on the increase, and that all of the retail dealers must be prepared for an active demand when the spring weather commences.

Collections are reasonably good, and the entire outlook for spring business is cheerful.

THE MCINTOSH-HUNTINGTON CO.

THE BALTIMORE TRADE.

Taking into consideration the recent cold spell and the mercurial condition of the market, business in this section has been above the average; certainly much ahead of the corresponding period of last year. There seems to be more regularity in the orders; quantities small, it is true, but well diversified, indicative of cautious buying at the other end of the line. Judging from the reports of our traveling salesmen, a fair spring trade may be expected.

Orders for later shipments are being placed freely on Poultry Netting, Wire Cloth, Screens, Freezers and such other profit-bearing (?) lines. No! we are not complaining at all. Only at times, even with the help of a buoyant imagination and a magnifying glass, we have failed to find the "mustard seed" margin of profit that a jobber should reasonably expect.

Values are fairly well maintained. Except in the way of Tacks, there have been no phenomenal declines. Wire has shown some little weakness, but it is safe to suppose it has reached "bed rock" at last. An advance is promised on Wire Nails, and it is reasonable to suppose the end of the month will find some of the months overcrowded with orders, and shipments considerably delayed.

Among the local retail trade, preparations are being made for an active Spring business. Many large building operations are contemplated when the weather becomes favorable, and suburban development promises to make this season a very busy one for Builders' Hardware.

TABB & JENKINS HARDWARE CO.

THE CHARLESTON TRADE.

Trade continues unusually good, and we are as busy today as we were in our January rush. The duplication of orders given earlier shows that the demand is still on and consumers not yet fully supplied. We note with pleasure that few orders are without a very gratifying list of pocket knives, scissors and razors, and the fact that they are needed, is evidence that money is still in possession of all classes in the country.

We have suffered vexatious delays in having orders for needed goods only partly filled, but are assured that all are treated alike, and all are still waiting for final shipment. We try and feel pleasant about the matter, and at times are a little envious of the complacent manufacturer who has our order booked, and knows full well that we cannot obtain goods elsewhere, and must wait until his convenience for shipment.

We were somewhat amused at the receipt of a circular letter from a large jobbing house, complaining about the invasion of territory by a certain manufacturer who, after getting the jobbers' orders, delayed shipment, and actually sold the jobbers' customers, making prompt deliveries in every instance to them. Upon complaint being made, the upright manufacturers protested, assuring the complainant that no one on earth would treat their customers fairer than they would, but were careful not to deny seeking the jobbers' trade. The name was given, which is not unusual in a circular letter, but we knew the circumstances before the receipt of the communication, and as we had placed no orders either for present or future shipment with the company, we were not especially interested there, but are not exempt from similar experiences in our own trade, that have annoyed and disgusted us.

We have learned, however, to regard each unrighteous departure from what we deem strictly honorable dealing as acts that should be condemned without comment, as it would be unjust to select one or two of the violators of what we deem commercial probity, and place them in commercial pillory, while numerous others that we know are equally guilty are passed unnoticed.

As we anticipated, the changes in prices are too trifling to be specially noted, and this, alone, is the most encouraging feature of the Hardware business, and will enable dealers to form more correct ideas of the unusual activity that has marked this branch since the season opened. It is singular to note the apathy of many in regard to those changes that have been announced. A decline was accepted without seeming pleasure, and an advance gave rise to no protest, or a reason asked, "why is it thus?" Many want to persuade themselves that national legislation has or will affect their business, but there are few in this section that are or could be in the slightest manner either benefited or injured by it.

We look to a good trade for some time to come, and will welcome the close of the year even if it brings us, now anticipated and much needed rest.

MARSHALL, WESCOAT & CO.

THE PHILADELPHIA TRADE.

Winter seems to be working on the plan of "better late than never," and now when according to the calendar we are only a few days from Spring, as a matter of fact we are all muffled up to our throats with the warmest clothing and moving around with the temperature near zero.

With all this extreme temperature, there has been very little snow; in fact Philadelphia has not seen a day's sleighing this winter, which is rather remarkable, as winter has been probably below the average temperature.

Of course zero weather is not conductive to the sale of spring goods, and as might be expected these are languishing somewhat, although trade as a whole can be said to be fair, and in excess of last year. Bicycles are going out steadily, and dealers seem anxious to be ready to supply the riders' demands, which are confidently expected (and reasonably so, we think) to come later.

Prices continue without marked changes, although there has been quite an increase in the Nail trade, owing to the announced advance of fifteen cents per keg to take place

Digitized by Google

about the first of March. While it is not thought that present prices invite speculation, it seems clear that to-day's Association controls the situation, and that it is perfectly safe for dealers to buy Nails sufficient for their legitimate wants next month.

Collections may be reported as only fair, and an improvement in this particular would be very welcome.

BIDDLE HARDWARE CO.

THE PITTSBURG TRADE.

The Hardware trade shows an improvement for the corresponding weeks of 1896, compared with 1895, and although there is room for further improvement, we feel encouraged to look forward to a good spring trade. We have some complaint of dull times and poor collections, but this is not so general as heretofore. The nail demand is not being stimulated for February as much as expected from the announcement of advance on March 1st, and we cannot help feeling that it is a bad move, as nails are already higher than they should be. Time will show whether the nail trust is being wisely managed. Bicycles are in great demand just now.

LOGAN-GREGG HARDWARE CO.

THE OMAHA TRADE.

January business was somewhat in advance of the corresponding month of a year ago, which, under the circumstances, was all that could reasonably be expected. In a general way trade has been dull and lifeless, the trade all holding off, and when they buy doing so in a hand-to-mouth way, which keeps the forces busy, but makes the figures far from satisfactory. The only line showing any particular activity is Wheels, which, even as early in the season as this, are showing a remarkable record, and the sales are

reaching much larger proportion than was expected. The outlook for Spring trade is favorable, and the volume of it may reasonably be expected to be some in advance of a year ago. Season goods, as is customary at this time of year, are somewhat demoralized, though in a general way prices are well maintained. The manufacturers' advance on Wire Nails, which, instead of stimulating trade, as was anticipated, we are of the impression will have a tendency to reduce the demand. Public opinion is a hard thing to fight against, and that is distinctly opposed to present prices on Wire Nails, and there appears to be a disposition on the part of dealers to buy no more than is absolutely necessary for their demands. Collections are not as good as we would like to see them, but are fully up to date.

RECTOR & WILHELMY CO.

THE DAVENPORT TRADE.

The new Excelsior Washing Machine made here is attracting a good deal of interest in the trade, and so far the factory has not been able to supply the demand.

A prominent jobber in interior Iowa is striking back just now at the jobbers outside of the State who have been shipping screen wire to junction points, and then peddling it out of a car placed temporarily on a side track, and guaranteeing prices by making a price that will not leave a large margin of profit to the guarantors.

The promised advance of fifteen cents per keg next month has stimulated the Wire Nail trade, and there has been a fair amouut sold the past week. The speculative demand for Barb Wire seems to be practically over, and dealers are apparently buying only for present wants. There is a little more activity in the Binder Twine trade, but not as much as one would think, considering that there was none carried over and the extremely low prices now ruling.

General Hardware trade is improving, and so far sales for 1896 are an improvement on 1895. Collections are better and there is very little cause for complaint, and no recent failures to report.

With deep regret it becomes our duty to record the death of John Alexander Lumsden, vice-president of the Sieg Iron Co., of this city. Mr. Lumsden entered the employ of his company twenty-two years ago as traveling salesman, and by persistent and well directed efforts, succeeded in building up a large trade for the concern. He invested a portion of his savings in the company, was elected its vice-president five years ago, which office he held until he died at his home here this morning. He was an active man, took a deep interest in every enterprise pertaining to the welfare of this community, and his loss will be keenly felt by his business associates, his many acquaintances and friends.

As a mark of respect, all of the iron and Hardware houses here will close to-morrow to attend the funeral.

SICKELS, PRESTON & NUTTING CO.

THE COLUMBUS TRADE.

By looking over our change sheet we find but few changes, and none of much importance, during the past week. Trade has not been as good with us for the past ten days as in the last two weeks of January and the first week in February. We think this can be accounted for by the condition of the roads, which have been and are in a very bad condition. This week starts out with about as severe a cold snap as we have had this winter. The mercury has been bobbing around zero for the past twenty-four hours. Commercial men who have to do any driving over mud roads will have a rough time of it. Smooth and barb wire prices have settled down to what seems to be hard pan, and we think they will stay there for some time, but it is hard to see in the future very far. The announced advance of 15 cents a keg on nails, to take effect March 1st, is stimulating trade on that line very materially. We are free to say that we decidedly object to the advance, as there is no reason for it, but we are not making prices for the Nail Association, and must submit to it. Ditching tools are in much better demand than last spring. The numerous rains have made it necessary to do a good deal of ditching. Sap spouts, pails and syrup cans are in good demand. The wet weather, with freezing and thawing, has been favorable for sugar making, but hard on wheat. Collections are still slow. We hope that some of the gold that went for the new bond purchase will get into general circulation; and we think as soon as railroad corporations and improvement companies can go to work that it will make a demand for raw and finished material that must in time help us all, more or less. We neglected to put in our bid for a few hundred thousand dollars' worth of bonds until it was too late. We think the other Hardware jobbers forgot also, as we did not notice any Hardware firms' names on the list.

SMITH BROS. HARDWARE CO.

THE ST. PAUL TRADE.

The weather for January was very mild, and consequently we had very little sleighing. This was a drawback to almost all kinds of business, as it reduced the sale of seasonable goods, and also retarded the marketing of farm products. Notwithstanding this, there is a very general impression that the later Spring business will be entirely satisfactory. Retailers generally are running with light stocks, and when the increased demand takes place will be obliged to buy liberally. Quite a good percentage of last year's crop is yet in the hands of the farmer; the prices on the same are improving. When marketed, which will be in the next three or four months, it will put into circulation quite an amount of money that will enliven business generally. The threatened advance in Wire Nails which is to take place in March, will probably cause the placing of some orders for car loads that would otherwise be held until later in the season. A very good business has been done in advance orders for Wire Cloth, screen doors, spring hinges, etc. Bicycle orders are coming in quite freely, and the prospect now is that the demand during the season will be large.

C. W. HACKETT HARDWARE CO.

THE TOLEDO TRADE.

Toledo and vicinity have been in the clutches of "Jack Frost" for at least five or six days. We have had quite a storm, which blocked business to a great extent.

Trade in general is very quiet, not very rushing, although we anticipate a good trade this coming spring. We notice a stiffening in the price of a number of staple articles, such as Nails, Galvanized Sheet Iron, and also a slight advance in Wire, and we would not be surprised to see higher prices ruling for such goods that have been at rock bottom prices, for March and April.

Orders are coming in quite freely, but they are small, and not for large quantities. We notice that dealers who used to buy three and four dozen of one article have cut down their orders to a *dozen* and even *broken packages*.

Collections in some sections have been very backward, while those especially from the "Oil Territory" have been very good.

Architects in Toledo all claim that they are quite busy, which leads us to believe that Toledo will do considerable building this season. In connection with this, we do not know of a better place in the United States where a manufacturer could locate than Toledo, having railroad facilities superior to most every other point, with but a very few exceptions, and we would like to see some of the Hardware manufacturers locate in Toledo, where they get good shipping facilities, cheap rents and a fine trade.

Anyone wishing to locate, if they will address us, we shall be pleased to give them such information as we can.

Poetry and Paints.

A "paint poet" paints his suggestions in this wise: "With the coming of each and every spring, editors and publishers are offered 'Spring Poetry,' which is considered by the authors, of a quality quite equal, if not superior, to anything ever launched upon the poetry-loving world. As with poetry, so it is with paint—as the spring season of painting and repainting comes along there is sure to be offered something new in the way of paint mixture for the protection of roofs, iron work, etc. Fortunately the public, as a rule, discriminate as wisely against such new nostrums as it does in its poetry, and rightly chooses a paint like Dixon's Silica Graphite Paint, which has been so favorably known for over a quarter of a century. Roofs painted with Dixon's Silica Graphite Paint have not required repainting in twelve to fifteen years and over. Railway and other corporations known for their thorough testing and careful selection of materials, use this paint in large quantities." Anyone desiring to know more about Graphite Paint should address the Joseph Dixon Crucible Co., Jersey City, N. J.

The Morris Hardware Co., Youngstown, Ohio, have elected directors as follows: H. M. Garlick, J. H. Morris, W. J. Hitchcock, L. E. Cochran, W. J. Whitworth, J. L. Botsford, Hugh B. Wick. The directors chose the following officers: H. M. Garlick, president; W. J. Hitchcock, vice-president; W. J. Whitworth, secretary and treasurer; J. H. Morris, general manager.

A Western man writes to a New York Hardware house that he has invented a "sweet potato hoe." Is this a novelty? Are any such hoes now made? Where are they used, and in what way should they differ from other hoes? Can anyone answer?

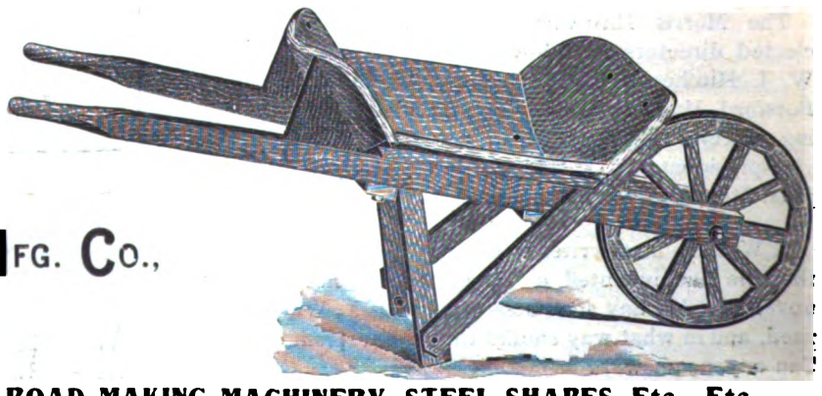
The ENTERPRISE MFG. CO.,

AKRON, OHIO.

The American Ordnance Co.

The American Projectile Co., Lynn, Mass., the Duggs-Schroeder Ordnance Co., Philadelphia, the Hotchkiss Co., of which Gen. Ordway is the American representative, the Bethlehem Iron Works, Bethlehem, Pa., Gatling Gun Co., Hartford, Conn., and a torpedo company of Providence, R. I., have formed a combination under the name of the American Ordnance Co., with headquarters at Washington, D. C. Gen. Albert R. Ordway is president, and the capital of the company is fixed at $2,500,000. A large plant will be built at Bridgeport, Conn., for the manufacture of guns and projectiles. The combine has been perfected to compete with the European concerns in the South American, Central American and Asiatic markets.

S. L. Allen & Co., Philadelphia, Pa., have gotten out a handsome catalogue for 1896. The cover is one of the most artistic we have ever seen. The company say: "1896 will be a banner year for the Planet, Jr. family. The old members, that all know so well and favorably, will be made young again so far as possible, while new members of great and certain value will join the ranks. Of special interest among the latter will be: A new horse hoe, of striking merit, No. 8; a single-wheel hill dropping garden drill, which is a great advance over all previous drill construction; also a combined riding harrow and orchard cultivator, a revelation in that line. And we expect to offer one or two other new and interesting members of the family a little later, by special circular." The catalogue illustrates the well-known implements manufactured by the company.



Edw. K. Tryon, Jr. & Co., dealers in fire arms, fishing tackle, sporting goods, etc., Philadelphia, are agents in Pennsylvania, New Jersey south of Trenton, Delaware, and central and western New York, and also Ohio, for the America wheel; and in Pennsylvania, New Jersey south of Trenton, Delaware and Maryland, for the World wheel. They have engaged W. Robert Landis, a professional rider, to ride the World on the track during the coming season, and, as he is a promising young rider, he will probably make some of the older heads work hard for first honors.

The Overman Wheel Co., Chicopee Falls, Mass., have published one of the most unique and artistic bicycle posters that has yet made an appearance. It is from the brush of Will H. Bradley. It measures 3½ by 1¼ feet in size, in panel shape, and is finished in colors of an attractive character. It shows a handsome wheelwoman mounted on a Victor wheel, and would make a most attractive decoration for any office or store. The poster can be obtained by anyone sending one dollar to the company at the above address.

V. M. Sapp will establish plow works at Starke, Fla.

"SCIOTO" for R. R. or Canal Work.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Bridgeton, N. J.—Newlin & Reid.

Campello, Mass.—Charles A. Norling & Co.

Groveton, N. H.—M. S. Wilkinson.

Kalamazoo, Mich.—W. D. Woolworth.

Marquette, Mich.—John W. Joachim.

Richmond, Tex.—H. L. Dyer.

Rushville, Kan.—Thomas Bunton.

Waukegan, Ill.—James Welch.

Record of Changes.

Atlanta, Tex.—Whattey & Spell, Hardware, etc., have dissolved partnership. T. S. Spell will continue the business.

Bluffton, I. T.—George T. Williamson, Hardware, reported to have been succeeded by Williamson Hardware Co.

Bowling Green, Ky. — Dixon & Ward, Hardware, have been succeeded by Ward Bros.

Brighton, Mich.—George Ratz, of Brighton, and Absalom Ratz, of Howell, have purchased the Hardware business of the well-known firm of Pipp & Becker.

Burlington, Vt.—The Holton Hardware Co., composed of J. H. Holton and R. S. Barstow, of Burlington; C. P. Van Vliet, C. M. Russell and H. W. Tracy, of Shelburne, has succeeded to the Hardware business of J. H. Holton, and with increased capital will try to extend the business.

Chattanooga, Tenn.—The firm of F. H. Woodworth & Co., Hardware, have dissolved partnership, M. L. French retiring. The business will be continued under the same firm name and at the same location.

Columbus, Ga.—Abbott & McKee, wholesale and retail Hardware, etc., have dissolved partnership, and the business will be continued by Abbott & Brinson.

Dansville, N. Y.—Edwards, Kern & McCurdy is the style of firm to succeed J. M. Edwards, Hardware. Mr. Edwards retains an interest in the business, but will also occupy the position as cashier of one of the principal banks of Danville.

Fairport, Mo. — Kennedy & Scholes, Hardware, etc., have been succeeded by Kennedy & Sherrard.

Franklin, Ky.—The Franklin Hardware Co. have succeeded Roby, Taylor & Co. in the Hardware business.

Fredonia, Ky.—Crider & Maxwell, Hardware, have dissolved partnership.

Havana, Ill.—C. B. Holzgrafe has purchased O. B. Thorp's Hardware store, and in the future will conduct the business.

Hospers, Iowa.—T. L. Dyk, Hardware, reported to have been succeeded by Dyk & Van Zyl.

Indianola, Neb. — Indianola Hardware, Implement & Furniture Co. has been succeeded by E. S. Hill.

Italy, Tex.—Bracken & Windham, Hardware, have been succeeded by Bracken & Moore.

Kennard, Neb.—Martin Heinsen, Hardware, has been succeeded by L. E. Ward.

Killeen, Tex. — Yarbrough & Burkes, Hardware dealers, have been succeeded by Burkes, Yarbrough & Burkes.

Littleton, N. H.—Whittaker & Son, Hardware, reported sold to A. D. Wright.

Lockport, Ill.— The Hardware firm of O'Connell & Sloan has been dissolved by mutual consent and Mr. O'Connell will continue the business at the old stand.

Malvern, Ohio. — George Hemming, of Carrollton, has purchased H. L. Casselman's interest in the Hardware store at this place.

Metuchen, N. J.—The partnership which has existed between Howard Bishop and Fred Mundy has been dissolved. Mr. Mundy will continue the Hardware business.

Milford, Kan. — Washburn & Rudolph, Hardware, have been succeeded by J. Rudolph & Son. They are largely increasing their stock.

Oneonta, N. Y.—C. D. & L. H. Townsend have bought the Hardware business of L. B. Lennon.

Ottawa, Ohio.—Frey & Agner, Hardware, stoves etc., reported to have dissolved partnership.

Ripley, N. Y.— Charles E. Brown has bought a half interest in the Hardware business of Perry & Son.

Ronceverte, W. Va.—Simms & Dunning, Hardware, have been succeeded by Simms & Co.

Rosebud, Tex.—Tarver & Henslee, Hardware, have succeeded W. A. Henslee.

Russellville, Ark.—Hall & Smith, Hardware, have been succeeded by C. P. Hall.

Salem, Mass.—Fowler & Morrison, Hardware, have been succeeded by Fowler & Daland.

Somerville, Mass.—S. H. Lewis, of the firm of Hudson & Lewis, builders and dealers in Hardware, etc., Nos. 181–183 Pearl Street, has sold his interest to L. G. Hudson, of the same firm.

Sumner, Iowa.—Muffley & Russell, Hardware, reported to have been succeeded by Jas. H. Muffley.

Taylor, Tex.—The Taylor Hardware Co. has changed its name to the Blaine-Trewett Hardware Co., and increased its capital from $25,000 to $50,000.

Trenton, Mo.—Sires & Tully, Hardware, reported to have dissolved partnership.

Utica, N. Y.— Roberts, Parry & Co., wholesale and retail Hardware, etc., reported to have dissolved partnership.

Vincent, Iowa. — Charles Knudson has disposed of his interest in the Hardware store.

Whitesboro, Tex. — R. S. Card & Co., Hardware, etc., have been succeeded by J. H. Shelby.

Willimantic, Conn.—The Way Hardware Co. has dissolved, and L. M. Way, who has conducted the branch in this city, will hereafter continue the same business as a partnership in company with his father.

Improvements and Removals

San Francisco, Cal.—F. W. Wright & Co., the Hardware dealers, have removed from the old stand at No. 727 Market Street to larger quarters in the Academy of Sciences building, No. 823 Market Street, in the block above, where they have fitted up one of the finest Hardware stores in the city.

Woodsfield, W. Va. — Linde & Moffett are improving their Hardware store by adding new shelving.

Business Embarrassments.

Clyde, Ohio.—A. C. Martin, a Hardware dealer, made an assignment recently.

Good Thunder, Minn. — H. G. Detloff, Hardware dealer, has made an assignment to William Wrucke. The assets and liabilities are estimated at $5000.

Johnstown, N. Y. — John T. Selmser, Hardware, reported to have made an assignment.

Leona, Kan. — Dan Moyer, Hardware, has made an assignment for $15,000.

Madison, Ind. — Alling & Lodge and George R. Bolen & Co., Hardware firms doing business together, have made an assignment.

Manchester, N. H.—Wadleigh Hardware Co. reported to have made an assignment.

Peoria, Ill. — The Hardware firm of Walker & Wookey have made an assignment to Jonathan Masker, for the benefit of creditors. The liabilities in the schedule filed with the recorder are placed at $5993.42 and the assets at $9731.10, the latter consisting of merchandise and tools valued at $5377, and open accounts and notes amounting to $3354.10.

Providence, R. I.—Charles H. George & Co., Hardware dealers, have assigned.

St. Louis, Mo.—The Randolph-Heckel Hardware Co. have made a general assignment. Liabilities about $31,000; assets, $45,000.

Burglaries in Hardware Stores.

Hartsburg, Ill.—Peter Hamer, $150.

Kingston, Pa.—A. J. Roat, $100.

Milton Centre, Ohio.—Singer & Henderson, $200.

Preston, Minn.—H. A. Boyer, $100.

Fires in Hardware Stores.

Carbondale, Pa.—Purdy & Sons, Hardware dealers, building destroyed by fire.

Howard, Kan. — J. O. Burchfield, Jr., Hardware and general merchandise store, destroyed by fire.

Mt. Pleasant, Iowa.—George C. Faulkner, Hardware stock, etc., destroyed by fire, at a loss of $5000; partly insured.

Rutland, Ill.—Thomas Dawes, Hardware store destroyed by fire. Loss, $8000.

Salt Lake City, Utah. — The Western Hardware Co., Jennings Building, on East Street South, damaged by fire.

Troy, N. Y.—Frederick Campbell's Hardware store damaged by fire. Loss, $2500; insurance, $1500.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Dubuque, Iowa.—The Hooper Mfg. Co., incorporated by J. C. Hooper, J. A. Hooper and C. N. Hooper; for the manufacture and sale of all kinds of enameled metal wares, plumbers' and steam heating goods, and all kinds of metal wares and supplies. Capital stock, $25,000.

Jackson, Mich.—A stock company called the Herrick Mfg. Co. has been formed with a capital stock of $5000 for the purpose of manufacturing Hardware specialties and sundries. The stockholders are L. H. Field, L. B. Cowley, D. A. Yocum, J. T. Hammond and Frank A. Herrick, and the officers are: President, L. H. Field; vice-president, J. T. Hammond; manager, F. A. Herrick: secretary and treasurer, D. A. Yocum. The company will commence business in the Standard block on West Main Street as soon as the arrangements can be completed and will manufacture Hardware store fixtures and Hardware specialties, and will give employment to a number of hands.

New York, N. Y.—J. F. Robin Co.; to manufacture metal goods. Capital, $10,000, and directors: Joseph T. Robin, L. L. Firuski, of New York City, and J. H. Hirsch, of Brooklyn.

New York, N. Y.—The Escoba Mfg. & Supply Co.; to manufacture the Clements broom and scraper hoe attachment. Capital, $15,000. Directors: W. Greenough, James W. S. Clellana and Robert L. Luce, of New York City.

New York, N. Y.—The Fox Cutlery Co. has been incorporated by J. F. Kenkel and Lizzie Kenkel, of Hoboken, N. J.; Geo. Falkenhainer and Laura Falkenhainer, of Dubuque, Iowa, and Clara Grabhorn and John H. Backus, of New York City. Capital stock, $8000.

New York, N. Y.—The Standard Automatic Horse Feeder Co.; to manufacture automatic horse and other stock feeders. Capital, $15,000. Directors: Frank H. Wakeham, E. H. Fuller and Lewis D. Fuller, of New York City; A. M. Warner, of Tuckahoe, and Lewis D. Fuller, of Atlantic Highlands, N. J.

New York, N. Y.—The White Burner Co., incorporated by Frank Z. Maguire, Walter B. Howe and Wm. M. Paxton, Jr.; to manufacture and deal in burners, lamps, etc. Capital stock, $100,000.

Peoria, Ill.—E. J. Darst, John E. Kirk and George F. Emerson are making arrangements to form a company to erect a steel axe factory.

Troy, N. Y.—The J. B. Carr Co. has been incorporated by Wm. Kemp, Mary G. Carr and E. Hancox, of Troy; Wm. Kemp, Jr., Lansingburgh, and F. B. Jillson, Whitehall; to manufacture chains. Capital stock, $30,000.

Changes and Removals.

Hartford, Conn.—The Hogan Mfg. Co. have bought out the Hartford Sanitary Plumbing Co., formerly located at Ferry and Commerce Streets.

Rochester, N. H.—The Pearl Square Auger Co. has commenced to move its machinery to its new factory at Gonic, where it expects to conduct business in a very short time.

Waukegan, Ill.—The Chicago Hardware Co. is moving its plant from Chicago to North Chicago, where buildings have been erected for it by land owners. The factory will be started in a few days, with a force of 200 men.

New Buildings and Improvements.

Southbridge, Mass.—Stephen Richards & Son, knife manufacturers, are building an addition to their factory on Elm Street, for reception of a new boiler they are putting in.

Torrington, Conn.—The Union Hardware Co. will erect new factory building. W. E. Griggs, architect, Waterbury, will probably prepare plans for same.

Warren, Ohio.—The Warren Hardware Co. has decided upon a 40x130 feet addition to its range works. This will increase the capacity of the plant one-half.

Recent Fires.

Birmingham, Ala.—The East Birmingham Hardware Specialty Co. was destroyed by fire recently at a loss of $25,000.

General.

Meriden, Conn.—At the annual meeting of the Meriden Bronze Co., held recently, these directors were elected: H. Wales Lines, John W. Coe, W. H. Lyon, A. H. Jones and William E. Gard. The directors subsequently elected A. H. Jones, president, and William E. Gard, secretary and treasurer. E. J. Doolittle and Levi E. Coe were appointed auditors.

Starrett's Pocket Companion Tool.

The L. S. Starrett Co., Athol, Mass., are introducing the Pocket Companion Tool, illustrations of which appear herewith. It is a novel contrivance, designed to serve as a screw-

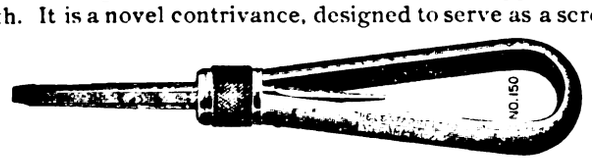

FIG. 1.

driver, brad awl and wrench. It consists of a neatly finished steel handle, with a knurled nut, which firmly holds a screw driver and brad awl made in one piece, the same being telescoped within the handle when not in use, as shown

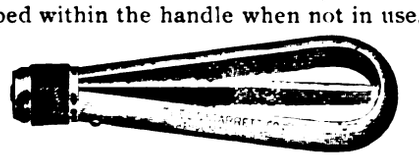

FIG 2.

in Fig. 2. The manufacturers remark that the shape of the handle enables it to be used as an emergency wrench, often of the greatest convenience. The tool weighs only two ounces, and sells for thirty-five cents.

New Haven Hardwaremen.

The New Haven (Conn.) Hardware Merchants' Club held a banquet at the New Haven House some evenings ago. Sixteen sat down to a table which was tastefully arranged. After the repast there were witty speeches and choice stories related by those present, and a flashlight photo was secured of the group. Those present were: Mr. Bushnell and Mr. Griggs, of the N. T. Bushnell Co.; Mr. Buckingham and Mr. Jackson, of Buckingham, Clark & Jackson; Newton Cox, of Cox & Lyon; Mr. Linsley and Mr. Lightbourn, of Linsley & Lightbourn; L. L. Rosenberg and Mr. Isbell, of the Bradley, Dann & Carrington Co.; Mr. Bissett, Mr. Silk and Mr. Kelly, of the J. E. Bassett Co.; George W. Baker, F. L. Leighton, W. A. Warner and R. T. Warner.

More Sycamore Records.

We are in receipt of information to the effect that on Feb. 8th, Hub. McCrea, mounted on a Syracuse wheel "broke the world's ¼-mile record paced standing start, time, 1.22 2-5—former record, 1.24 1-5, while C. S. Wells broke the world's flying start paced record for the same distance, Feb. 12th; time, 1.18 flat. Also that McCrea broke the world's standing paced mile on Feb. 14th; time, 1.49 2-5."

The Syracuse Cycle Co. add that "This is the tenth world's and twelfth Coast record broken by the Syracuse Team during their stay in California; and as Billy Hamilton has just left his home in Denver for Coronado, together with two Crimson Rim quads, one quintette and one sextette, many more records are liable to fall to the good Sycamore ere long."

Hardware Dealers

can net a good profit by handling **Bicycles** of recognized merit, having a well-established reputation. Unknown and inferior wheels are not profitable, even though the discount be unusually large. The . . . . . .

Remington Bicycles . .

like other **Remington Products,** enjoy a universal reputation for excellence and reliability. Eighty years' experience and up-to-date methods have brought the **Remington** to the front. . . . . .

Agencies are now being arranged in unoccupied territory. Handsomely Illustrated Catalogue, fully describing new models and their exclusive improvements, mailed free to any address.

REMINGTON ARMS COMPANY,

313-315 Broadway, New York City.

MONARCH

THE APEX OF BICYCLE PERFECTION.

IN our 1896 Models we have incorporated all the good things known to the best Bicycle Makers, including several features peculiarly our own. They are the crowning glory of our unparalleled success as builders of high-grade wheels—the concentrated extract of bicycle goodness.

WE also make **DEFIANCE,** the best of lower-priced wheels, especially adapted to the Jobbing Trade. Eight models for adults and children, $75., $60., $50 $40. Fully guaranteed.

Four Models,

$80 and $100

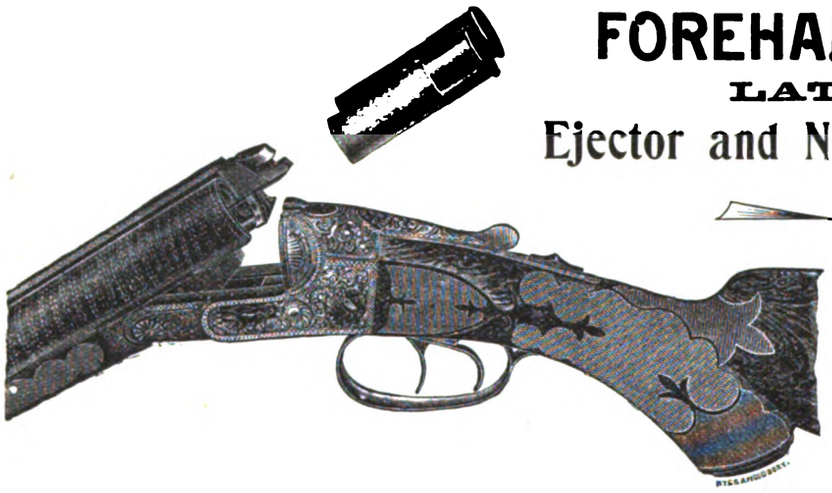
Manufacturers of **MEASURING TAPES, Etc.,**

BRANCHES:
111 Madison Street, Chicago.
708 Locust Street, St. Louis.

127 FULTON STREET, NEW YORK.



The **Home** Steel Tape is intended to supersede woven tapes (metallic or linen) by reason of its incomparably greater accuracy and its very low price. The **Home Tape** has a red bent **sewed leather case**, with **brass-lined mouth piece, with anti-friction roller.** The folding brass handle is practically flush. The steel line is ⅜ inch wide, and sharply and plainly graduated. The graduations and figures are bright, while the ground surface is nearly black. It is to all appearances a **First-Class Steel Tape**, but it is not to be compared with our well-known Excelsior steel tapes. Woven tapes are used on account of their very low cost for many purposes for which a more reliable tape ought to be employed, like in the building trades, construction and railroad work, etc. The low priced **Home Steel Tape** will therefore be welcomed as meeting a frequent requirement.

HOME STEEL TAPES.—Feet divided to inches and 1-8 inches:

25 feet.—No. 80, $34.80 doz. **75 feet.—No. 83, $56 40 doz.**
50 feet.—No. 81, $42.00 doz. **100 feet.—No 83, $72.00 doz.**

We can furnish these tapes also with feet divided to 1-10 and 1-100.

Liberal Discounts to the Trade.

THE OTHER 999 FELLOWS FAILED BECAUSE THEIR SHARPENERS DIDN'T SHARPEN, WE ARE THE 1000th TO TRY; BUT THE FIRST TO SUCCEED MAKING SHARPENERS THAT WILL SHARPEN.

Dealers! Don't Buy Junk for Skate Sharpeners. A few jobbers were foolish enough to load up on last year's failures, and now they want to dispose of them badly. **Don't buy till you see the "DIAMOND"**

THE "DIAMOND" SKATE SHARPENER.

The only Sharpener on the market that will do a clean, smooth job.

HARDWARE DEALERS sell one with every pair of skates, and hundreds to people who already own skates.

SAMPLE BY MAIL, 25 CTS.

All our Sharpeners are elegantly nickel-plated and packed one dozen in a box.

SOMETHING ENTIRELY NEW!

Every Boy Sharpens his own Skates.

See that Pivot!

Fits the Curve of any Skate.

Think Twice

Before you decide what Refrigerator you will handle.

PEOPLE who are posted will not buy a Refrigerator which has the Ice Receptacle in the provision chamber. They know that such a faulty construction induces moisture and causes mouldy food. The best informed buy only the

Leonard Cleanable.

Neither will they buy a Refrigerator from which the entire ice box has to be lifted out to clean. The Movable Flues of the

Leonard Cleanable

comprise the simplest and best method of refrigeration. There are many other reasons why you should decide to handle only the **Leonard Cleanable.**

Polar Star Instant Ice Cream Freezer.

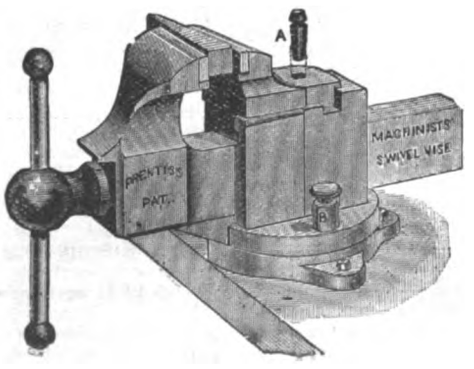
A Marvel to all who behold it in operation.

Size, 21x7x7. Retail Price $3.75. Capacity unlimited

It makes perfectly smooth ice cream with all milk. Cream added makes it somewhat richer, but not smoother. It makes very superior, smooth water ices, frozen fruits, frozen custards, sherbets, etc., and is a very simple, convenient and economical freezer.

No Gearing, cogs or fixings to get out of order.

Noiseless in operation. A child can operate it. Makes a plate of ice cream in 30 seconds or a quart in 5 minutes. All other quick freezers merely SCRAPE it off a tin surface of some kind, but do not BEAT IT or WORK IT.



Our Freezer **Mixes, Mashes, Pulls, Grinds** and **Whips** the cream more in **30 seconds** than any paddle freezer does in **30 minutes.** Dealers will do well to investigate this promptly. Correspondence solicited.

WE GUARANTEE

A CIRCULATION FOR ALL THE NEWS. HARDWARE HARDWARE EXCLUSIVELY. OF NOT LESS THAN

ONE HUNDRED AND TWENTY THOUSAND

FOR

1896.

There is but one way, outside of the word of the publishers, to settle definitely the circulation of any newspaper, and that is to **publish the receipts from the post office** for the matter that is mailed. During 1896 we shall adopt this system, and will, each issue, publish the receipts for the preceding issue as obtained from the mailing department of the New York post office, and this will settle, once and for all, the truth of our assertions.

If it can be shown that we fall below 120,000 in the year we **will donate $1,000** to any charity named by the president of the New York Hardware Club.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - **99 Cedar Street, New York City.**

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

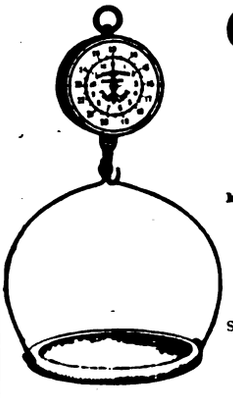
HERE IT IS.

The BOSS LANTERN LAMP.

Patented Nov. 27, 1894.

NO wind or hurricane, however strong, can blow it out. Any No. 2 crimped top chimney will fit it. Chimney does not get hot, because the cold air goes down into the chimney around the sides—the hot air comes up through the center of the chimney drawing the flame up several inches, making the light 5 candle power, producing a cold draught under the flame. The candle melts very slowly, making half candle last many hours.



There is a standing offer of **One Hundred Dollars** to any one who can take his Hat, Fan or any thing else and Fan the light out. It is impossible to fan the light out or for the wind to blow it out.

Sample free, prepaid. Write for special prices delivered.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE

AMERICAN WICK

Made by the

WICK DEPARTMENT

Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

DRILLS

Burns Kerosene Oil

AND IS

WIND PROOF.

All Parts Riveted or Seamed.

NO SOLDER TO MELT.

Removable

TOP.
FOUNT
REFLECTOR.
BURNER.

Makes it Easy to Take Apart. Easy to Put Together.

THE Fount unscrews from the Burner. All brass, full nickel plated. It is packed with cotton, preventing any splashing of the Oil in the jolting of the wheel. The Burner is attached to the lamp proper by a bayonet catch, so that both Fount and Burner can be removed in an instant. The Filler Cap on the side of the Fount makes it most convenient for filling. . . . . The lamp is 5½ inches high. The lens 3 inches in diameter, and as made gives a double reflection, both downward and straight ahead. The weight is 12 ounces. It is clean, simple, light and durable.

HARDWARE

VOL. XII. MARCH 10, 1896. NO. 11.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade.
Published on the 10th and 25th of each month, by the
HARDWARE PUBLISHING COMPANY.
No. 148 CHAMBERS STREET, NEW YORK.

BRANCH OFFICES:
CHICAGO, - - - - - - - - No. 417 ASHLAND BLOCK.
BOSTON, - - - - - - No. 13 PEARL STREET.
CINCINNATI, - - - - - No. 101 NEAVE BUILDING.
DETROIT, - - - No. 10 PENINSULAR BANK BUILDING.

Subscription, - $1.00 per year.
Subscription, Foreign, $1.50 per year.

THE CIRCULATION OF "HARDWARE" IS
LARGER THAN THAT OF ANY OTHER
PAPER IN THE UNITED STATES
DEVOTED TO THE HARDWARE TRADE.

ILLUSTRATED BICYCLE NOVELTIES..... 28
NEW GOODS IN THE MARKET..... 31
RECENT TRADE PUBLICATIONS..... 39
REVIEW OF THE MARKETS..... 44
RETAIL TRADE RECORD..... 50
HARDWARE MANUFACTURERS' RECORD..... 52
BICYCLE TRADE RECORD..... 54
HARDWAREMEN'S EXCHANGE..... 82
PRICES CURRENT..... 85
CLASSIFIED INDEX TO ADVERTISERS..... 95
ALPHABETICAL INDEX TO ADVERTISERS..... 98

WE GUARANTEE THAT THE CIRCULATION OF "HARDWARE" DURING 1896 WILL EXCEED

ONE HUNDRED AND TWENTY THOUSAND

AND THE SAME WILL BE PROVEN BY THE PUBLICATION ON THIS PAGE, IN EACH ISSUE, OF THE POST OFFICE RECEIPTS FOR COPIES MAILED THE PRECEDING ISSUE.

There will be no war with England. On the whole, we don't believe that anyone, except the pugnacious and patriotic New York *Sun*, ever believed that these two great Christian nations would come to war over South American boundary lines, or over any other question, at this stage of civilization. Still, it is the part of patriotic wisdom to be ready, and the more preparation made to receive an enemy the less likelihood there will be of any enemy coming this way.

Congress seems to be a great deal more interested in Cuba and European politics, than in the financial and business situation of the country. Perhaps there is a benefit to be derived from this. As a general thing, the less law-making, the better for the country at large. This comes from sending men to Washington who know more about law and politics than practical business affairs.

Hardware's Circulation, Feb. 25, 1896.

Since the opening of this year, the circulation of *Hardware* by issues has been as follows:

January 10th - - -	**5651**
January 25th - - - -	**5125**
February 10th - - -	**5377**
February 25th - - -	**5249**

This makes a total of **21,402** for two months. These papers have not been scattered over a half dozen trades, but have gone into the hands of but one—those who buy Hardware to sell again; the Hardwaremen, and the house-furnishing stores that make Hardware an adjunct. The value of a circulation of this character can be seen at a glance. The question of *quality* counts equally with that of *quantity*.

The following tells the story for our issue of February 25th:

ORIGINAL.

NEW YORK POST OFFICE,
MAR 2 1896
....., 189....

Received from

Hardware

IN WEIGHT, AS FOLLOWS:

	TARE.	GROSS WEIGHT.
32 *No. 1 Sack 3 lbs.*		2782
No. 2 Sack 2 lbs. 5 oz.		96
Net weight - - -		2686
Rate per pound - -		01
Amount of postage -		$26.86

Per Callahan *Receiving Clerk.*

C. W. DAYTON, *Postmaster.*

Applying the commonest rules of arithmetic to the above, we find:

2686 × 16 = 42,976
42,976 ÷ 9½ = 4523
4523 + 726 = 5249

In other words, 2,686 pounds of *Hardwares* were mailed at pound rates; each copy weighed 9½ ounces, making a total of 4,523 copies. Add to these 726

Digitized by Google

delivered by carrier in New York, mailed under postage stamps, and held for office use, and we have a total of 5,249 as our issue for the last number of February, 1896.

The view taken by intelligent experts of an exhibit like that above, is well shown by the following from the latest issue of *The Trade Press*, a well-known journal of Chicago, published in the interests of trade and class journals:

"*Hardware*, of New York, claims a circulation larger than that of any other paper in the United States devoted to the Hardware interests. It guarantees that during 1896 its aggregate circulation will be 120,000, and the same will be proven by the publication on its editorial page, in each issue, of the post-office receipts for copies mailed the preceding issue. *Hardware* is a good old standby, and its boasts are not made up of wind, like some others in its line."

Those Lively Crimson Rims.

The Syracuse Cycle Co., Syracuse, N. Y., make the following interesting statement: "The demand for Syracuse Bicycles in the metropolitan district is something phenomenal It has gradually grown to such proportions that our metropolitan representative, Chas. J. Stebbins, was in a quandary as to how he would be able to secure Crimson Rims quick enough to supply the ever increasing demand. This matter was settled, however, by a wire to the Syracuse Cycle Co. on Feb. 25th, to the effect that he must have a car-load by express at once. It is with considerable credit to the hustling propensities of this company, that within two days after receipt of this telegram, three hundred and twenty-five Crimson Rim Syracuse bicycles were loaded on an American Express car and shipped to New York. We are informed that this is the only car-load express shipment ever before made in this country. Special dispensation was granted by the N. Y. C. & H. R. R. R. to allow us to decorate the car with banners appropriately lettered. We also beg to announce that we have closed negotiations with the Duguid Saddlery Hardware Co., of Syracuse, N. Y., for a large quantity of their new and improved saddles. This company make a specialty of a broad seated ladies' saddle, which they believe is far superior, from a hygienic point of view, to anything that has ever before been constructed."

Hardware's Chicago representative dropped in on E. M. Murray, secretary of the Bicycle Step Ladder Co., No. 50 State Street, one day last week, and found him engaged in assorting a very liberal consignment of mail, among which were orders for the Bicycle Step Ladder from the following states: New York, California, Maryland, Illinois, Colorado, Missouri, Pennsylvania, Vermont, Connecticut, Texas and Wyoming. In addition to these were orders from Montreal, Quebec and Halifax, N. S. To have received orders from so many different points in one day's mail, speaks eloquently of the eminent adaptability of the Bicycle Step Ladder to the wants of storekeepers who have high shelving; particularly in view of the dullness of the times, when business men in every line are cutting down expenditures and doing without all the conveniences they can spare.

A Colorado Hardware dealer has for a sign over his store door a big red coffee pot, covered with letters enumerating his line of stock. It makes a very unique advertisement and does not fail to attract the attention of all passersby.

Annual Banquet Minneapolis Hardware Association.

The second annual banquet of the Minneapolis Hardware Association was held February 25, 1896, in the spacious banquet rooms in the Guaranty Loan Building. There were thirty members and guests present, representing nearly every Hardware store in the city.

After a half hour's social chat in the parlors, the company repaired to the dining-room and sat down to a bountiful repast, prepared by one of the best known caterers in the Northwest.

After the cigars were served, C. F. Stremel, president, acting as toastmaster, gave the address of welcome. The following toasts were ably responded to:

Pioneer Hardwareman, - - - - - J. Stoft.
The Retail Trade, - - - - - J. H. Smith.
The Retail Hardware Association, - H. B. Gardner.
Hardware Stores vs. Department Stores, F. L. Stoddard.
Future of the Retail Trade, - - - F. R. Warner.
Our Union, Past, Present and Prospective, J. E. Nash.

Mr. Nash also read the following poem composed by himself which was loudly applauded:

THE RETAIL TRADE.

Excuse the liberty I take, in answer to your call;
I'll tell the plain unvarnished truth tho' it should hit us all;
I once a million hoped to make, and wished for three or four;
I really thought the place I'd found within a Hardware store.

I advertised, and sold goods cheap, expecting great renown,
And thought the other Hardwaremen would have to leave the town.
But trade came slow; I could not see the error of my game
Until I found some fifty men had figured just the same.

My pride was touched; I cut so low, my store would scarcely pay.
And don't you think those other chaps they did the selfsame way?
Thinks I, this lesson I should heed; oh, if I only knew
Some Moses in this wilderness to lead me safely through.

But things grew worse; we all marked down; no profits could we see
Until a Moses did appear and said "Come, follow me." [see;
He said, "No man could run the town, we all had come to stand.
United and I will lead you out into the promised land."

We did unite; he led us on, into a better way;
We grew in strength, and took delight in profit day by day.
Then Moses called his faithful ones unto a banquet fine,
And promised ere the year was past he'd lead us o'er the line.

But Jordan was not yet in sight, for one with no regard,
For rank or station, came and pitched his tent in Moses' yard.
"Now stop!" says he. "We can't agree, this part of town is mine.
"What's he about? Just take him out, or else I will resign."

Then in the thickest of the woods he left us in the lurch,
If they had been two *little chaps* we'd treated both with birch.
Where then to go, we did not know, until a later day,
A little Moses did arise and tries to lead the way.

Now if we spend our surplus cash to run our neighbor out,
His place will soon be filled again by abler men, no doubt.
And they will also look about and try the game to win.
Till, pockets bare, we sell and get some other victim in.

And so the ball turns round and round, the trusts our profits take,
Until at last we're well content if we our living make.
Just use your eyes, and look about, whose is the master mind?
'Tis men of brains and men of wealth all solidly combined.

Then let us stand a loyal band, no need that one should fall, [all.
We'll save our strength to right the wrong, there's room enough for
Now in this day of great combines our pledge we should renew,
In unity and harmony, there's strength and profit too.

But where is our first Moses now, who led us over there?
We listen—listen—for reply, but echo answers: "Where!"
If you should see him, give your hand, and tell him you've no doubt,
Should he apply, and with us try, we'll work the problem out.

An Indian scalping knife was found in a tree in Clearfield County, Pa., a few days ago. The blade was imbedded twenty feet from the ground, and as the tree counted one hundred and seventy-five rings from the point of the knife to its hilt, it would indicate that the blade had been in the same position for almost two centuries. The stamp on the side of the knife consists of the representation of a crown and a bottle, and it was no doubt imported from England in the early days of the colonies and was probably traded to the Indians.

Why Jacob Added Bicycles.

Editor Hardware: For a hundred and fifty years the Trotlines, of Boston, have been in the Hardware business. From the day the first Jacob Trotline hung the immense gilt padlock over the door, down to the day of the present Jacob, there has been an unbroken succession from father to son.

Notwithstanding the prestige established, the business of the present proprietor is at a standstill—even worse; ugly rumors come to Jacob's ears, which drive him to his dingy office, where he buries himself for hours in old accounts.

Jacob Trotline is very conservative; when approached by traveling men who desire to introduce this or that novelty, he has but one reply. "My people," he will say, "have had this stand for a hundred and fifty years, and got along without your jimcracks, and so can I." Especially was he averse to the bicycle, and all pertaining to it; he accepted soberly the grotesque cuts of the bloomer woman, as produced in the comic papers, a liberal supply of which his friends or enemies never failed to provide. St. Valentine's day was too good an opportunity for the jokers to miss. The valentine Jacob received pictured Cupid riding a safety through the air, with the legend "Cupid up to Date." The jokers had added a very good likeness of Jacob, with wings, bow and arrow, labeled "Jacob Trotline out of date."

After receiving this valentine the motto "Out of Date" set him to thinking. That night he worked at his books alone, and it was after eleven when he closed the safe, turned down the gas, and, before putting on his overcoat, sat to warm his feet before the open grate, which still contained a few glowing coals. With the valentine in his hands, he gazed into the fire, and the traditions of his ancestors were strong upon him. Then the clock in the old church tower clanged out the first stroke of midnight. Immediately a rattling and a clanking as of iron bars from the rear of the old building caused Jacob to turn with a shudder. What he saw, or thought he saw, held him in horror and amazement.

Two feet from the old anvil, used in cutting iron, a white shadowy something appeared through the gloom, and took the semblance of a human skeleton. In phosphorescent letters across its brow glowed the legend "Out of date." At the second stroke the rattling was repeated, and another skeleton stood beside the first, and so on until the last quaver of the bell, when, side by side around the anvil, twelve skeletons stood, each with a blacksmith's sledge held high in its bony hand. To add to the horror of this strange sight, Jacob thought he saw a change take place in the anvil as each skeleton appeared.

But it was only when the twelfth one took its place that Jacob's idea was confirmed. The anvil had taken on his likeness. It was his own figure he saw in the centre of the standing circle of bones. At this moment the skeleton labeled "Out of date" swung its sledge high in the air as though to strike the likeness of Jacob, but the sledge seemed beyond its control, and instead of the skeleton swinging it, the sledge made the skeleton dance and rattle around the crouching figure, part anvil, part man. The man-anvil begged for mercy, promising the dancing skeleton to do anything and everything, even to adding a line of bicycles. This last promise caused the skeleton to jump higher, and the sledge came down with a ringing blow. Immediately "Out of date" fell apart with a click. The next skeleton to strike was "Poor Buying." This presented a most deformed appearance, with no skull, and bones for both legs on one side. The blow it struck, however, was a powerful one, making the fire fly as the sledge descended. Then in succession came "Just as Good," "Cut Prices," "Quantity five per cent.," "Neglect," "Dishonesty," "Deceit," "Uncleanness," "Hand-Bill Advertising." Two of these were joined like the Siamese twins. Their names were "Credit" and "Slow Pay." Immediately following the last blow Jacob heard the "click" as before, then all was still.

The surprise of the good friends of Jacob Trotline was great indeed to see a workman taking down the old padlock. It was greater when they saw swinging in its place a bicycle. But this was not all. Plate glass replaced the small panes in the show window. The old stock was brought out and sold. His advertisements appeared in the papers, particular attention being called to the assertion that all goods and methods were "strictly up to date."

SHOP MAN.

Mr. Wilhelm Appreciates Sympathy.

W. I. Wilhelm makes use of *Hardware* in acknowledgment to his many friends, in the letter that follows:

HAMBURG, PA., February 28, 1896.

Gentlemen: The total destruction, February 20, 1896, of my home by fire, has made me the recipient of a great many letters of condolence and sympathy from my many friends. As it is almost impossible to acknowledge them in severalty, I take this means of returning my most sincere thanks for their kindness. The accumulation of many little articles of vertu, extensive library, and the trophies of many hard-won races, as well as the collection of all things that go to make up the comforts of life and the satisfaction of a quiet and happy home, have been wiped out of existence in a few hours. The loss is irreparable, but the many expressions of sympathy and the kindness extended me by my friends and neighbors have gone a long way to relieve the minds of myself as well as my family of the unfortunate occurrence.

Very truly yours,

W. I. WILHELM.

A "Grate Hand for Brain Work."

The Peninsular Stove Co., Detroit, Mich., believe that they have learned why there is forever a rush to the cities, to the detriment of the country. It is because the brains of so many men ache with greatness, that a scene of excitement is sought as a means of relief. They base their theory upon a letter received some days since, of which a verbatim copy is here given:

February 20th, 1896.

Dear Sir:—"I have made a few inventions but I am to poor to get them Patented so I would like to sell them or give them to some one that can get them Patented and then draw a sirtain Persent of the Profet.

I am farming now But I would like to git a plase to work on a big factory or invention shop because *I am a grate hand for brain work.*" yours respectfully,

---

E. C. Stearns & Co., Syracuse, N.Y., say through the columns of their "Spokesman," that "the shipments of Stearns bicycles just now are keeping the truckmen of Syracuse in a state of perpetual activity. Besides hundreds of smaller shipments, two entire carloads of wheels were sent out recently, one going to H. B. Shattuck & Son, of Boston, and the other to the Tinkham Cycle Co., of New York. Verily, business is in a flourishing condition when shipments like this become an everyday occurrence."

The Hall-Shone Co., Rochester, N. Y., have elected the following officers for the coming year: E. H. Hall, president and treasurer; F. A. Norcott, vice-president, and H. L. Hall, secretary. The company are meeting with greater success than ever in the manufacture and sale of their Automatic Rubber Mud Guard and other specialties, including Hutchinson's Dress Guard and Tire Lacing Cord, of which they are the sole selling agents.

Window frames and door casings are now made of aluminum, to be used in the construction of fireproof buildings.

Russia produced 130,898 tons of cast iron in 1894.

Southington Cutlery Co. Steel Squares.

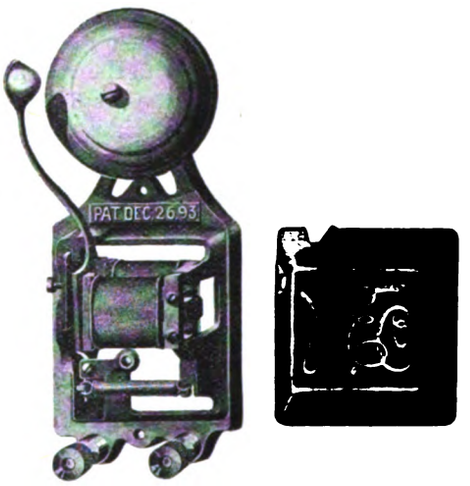
The new Steel Squares here shown are being manufactured and successfully placed upon the market by the Southington Cutlery Co., Southington, Conn., and No. 98 Chambers Street, New York, with Arthur G. Sherman, No.

14 Warren Street, New York, distributing agent for the Eastern and Middle States. In connection with them, and in description thereof, the company say: "For the past two years we have been remodeling, improving and adding expensive machinery for the better production of perfect Steel Squares. Our increasing trade on these goods

indicates that our efforts to produce a superior square are appreciated. A carpenter's square, perfect as it may be, is still an unhandy tool to carry. The increasing call for a square that is accurate and can be put in a small compass, has led us to investigate the merits of the several inventions in this line, and after carefully testing we have decided to manufacture the Goodgion Patent Folding Square. Its simplicity and practicability requires no explanation. The joints are formed by accurate tools, are hinged on a special steel rivet, and held in place for use by a counter-sunk steel screw, making it a perfect tool for its purpose. We have produced only style No. 3 regular as yet, but will furnish any style of the better grades if desired. No. 3F, list price $21.00 per dozen, less 20 per cent. discount to the trade. Packed in small cases of 2 dozen each." The illustrations carry their own description.

The First Implement Train.

A train of twenty-five cars loaded with agricultural implements, wagons and buggies for Colorado and New Mexico, left Kansas City this morning, says the *Kansas City Star*, of Feb. 28th. It was the first implement train ever sent out of Kansas City. The entire train load of implements and wagons were sold in Colorado and New Mexico by H. D. Steele, the Western agent of the Parlin & Orendorff Co. of this city.



The train was made up last night in the freight yards of the Santa Fe railroad at Argentine and was billed to leave for the West at 6 o'clock this morning, but was held till 9 o'clock to be photographed. J. Z. Rohraback, superintendent of terminals of the Santa Fe road, and a crowd of railroad men and implement dealers went to Argentine early this morning to see the train. The cars were furniture cars, each forty feet in length and of exactly the same color and size and were equipped with air brakes. A "Jumbo" mountain engine with a steel snow plow in place of the regulation cow catcher had been brought from Colorado especially to pull the train. Along the sides of each car, near the roof, were cotton signs with letters three feet long, that extended the whole length of the car. The car next to the engine bore the sign "Parlin & Orendorff Co., Kansas City and Denver;" the next car bore the sign "This is the first trainload of implements, wagons and buggies shipped from Kansas City." Then followed such signs as "Just a little starter for 1896," "Must be some good reason for all this," "This is not the end—there is more to follow," "Do you know this train is nearly one-fourth of a mile in length, weight of goods in cars 700,000 pounds, value $75,000?" Other signs advertised the line of goods made by the firm.

A passenger coach was attached to the train and the following persons started with it for Denver: H. D. Steele, Cyrus Funk, J. T. Allison and W. B. Frederick of the Parlin & Orendorff Co. and P. H. Manter, J. E. Meginn and H. M. Parry of the Santa Fe road.

The train will reach Denver Monday night. It will travel only during the daytime. At Holliday, Kan., where the train made its first stop, a crowd had gathered this morning to see it. Officials of the Santa Fe road said it would cost Parlin & Orendorff about $5,500 to have its train hauled from this city to Denver.

Electrical House Bell.

The accompanying cut gives a good idea of the appearance of a new electrical house bell, which has just been brought out by the Western Electric Co., Chicago and New York. It is to be known as the "1020" bell, taking its name from the list number. The makers state that "this bell is so constructed that it will work perfectly for a year

without any attention, where ordinary bells frequently require looking after every month or so. The magnet has a broad armature surface which makes it much more powerful, and the armature works on a pivot where cheaper bells are made with a clamp and spring. Notwithstanding the increase in the cost of construction resulting from these improvements, the cost of the bell to the trade is only slightly greater than the cheaper makes in common use, and to individual purchasers the difference would be merely nominal. Every householder who has bought ordinary bells will readily see the advantages of this one." Dealers should write for prices to either the New York or Chicago house where a full stock is carried and secure at least one sample of the bell for examination and exhibition.

At the annual meeting of the stockholders of the Reading (Pa.) Stove Works the following directors were elected: Elijah Bull, Enoch T. Painter, William H. Shick, Charles S. Prizer, Robert P. Shick, Jesse Posey and Grant Nagle. The board reorganized by electing Charles S. Prizer, president, Elijah Bull, treasurer, and Robert P. Shick, secretary.

The Marlin Firearms Co. have added to the model 1895, which was lately brought out in the 40 and 45 calibres, the 38-56 calibre. These rifles are now ready for delivery.

CONTINOUS BUSINESS-PAPER ADVERTISING.

BY NATH'L C. FOWLER, JR., DOCTOR OF PUBLICITY.

In continuity is strength.

In disconnection is failure.

The Builder of the Universe did not build something, Monday; and build nothing, Tuesday; and rebuild, Wednesday; and rest, Thursday.

He built something every day of the week, and only rested when He was through.

The forces of nature are continuous.

The fundamental principle of motion is everlasting.

The brook which runs on forever is the brook the fish live in.

The brook which dries up in a month, and i a torrent next month, is the brook folks try to get rid of.

The man who feeds his horse on Monday, and gives him nothing to eat on Tuesday, has a weak horse on Wednesday, and a dead horse on Thursday.

The child who goes to school on Monday, and skips Tuesday, and attempts to connect the end of Monday's lesson with the beginning of Wednesday's lesson, is handicapped by conditions diametrically opposed to progressive education.

All things being equal, the store which has been the longest time in some one place is the store which does the greatest business.

Change of base, and especially change of business base, is only allowable excepting under conditions which make moving essential.

Money is made in specialties and bargains, but the fortunes of trade have been made, and always will be made, along the regular line of regularity; by handling business, to-day, as it was yesterday, and by handling business, to-morrow, as it was handled, to-day, subject to the changes of the times, and to the recognition of the conditions of progress.

Continuous good is far better, and more negotiable, than transient good, however good transient good may be.

The most progressive advertisers of the world have advertised continuously.

They advertised not for the fun of it.

They figure business on the hardest slate with the hardest pencil.

All that they do, they do for profit only.

Ninety-nine per cent. of successful advertisers are continuous advertisers.

The man who advertises in January, and discontinues his advertising in February, must advertise more extensively in March, in order to cover the gap his foolishness has created.

It takes more advertising in March to bridge the break of February than it does to advertise in January, February and March altogether.

There are lines of goods which can't be advantageously extensively advertised during certain months of the year, but advertising of those goods should never be completely annihilated.

It can be reduced in size, for any object, but it should be continuous, that there may be no need when extensive advertising begins of connecting the two advertising periods.

The continuity which regulates all good business should be used in the regulation of advertising.

Advertising is no longer a luxury or a side issue.

It is a commodity.

It never will be successful unless it is handled the same way as are handled other commodities.

Copyright, 1896, by Nath'l C. Fowler

In the continuity of advertising is the good of it.

In the continuity of advertising is the strength of it.

To break the advertising connection is to break trade connection.

Trade connection can be broken, advertising connection can be broken, and the house still remain successful, but the shrewd business man is not satisfied with the minimum of success. He is everlastingly striving for the maximum of success.

When he cuts expenses he cuts proportionately everywhere.

He does not stop advertising.

He advertises a little less, perhaps, but he advertises.

He never allows the medium he uses to go to press without the mention of his name and of his business.

He advertises in off-season, in order that the people may be better prepared to appreciate his efforts in season.

He keeps everlastingly at advertising, and wins.

J. W. Kiser.

J. W. Kiser, president of the Monarch Cycle Mfg. Co., was born on a farm near St. Paris, Champaign county, Ohio, thirty-eight years ago, and followed farm work until entering Wittenberg College, Springfield, Ohio, in 1880,

from which he graduated in 1884. He intended taking up the profession of law, but, getting married, was confronted with the necessity of at once making his own living, and accordingly took a position with the O. S. Kelley Co., large manufacturers, of Springfield, Ohio, as traveling collector or adjuster of litigated claims. He resigned his position in 1889 to take the management of the Chicago Sewing Machine Co., at that time employing about thirty-five men. Out of this company has evolved the Monarch Cycle Mfg. Co., capitalized at half a million dollars and employing 1000 men, of which Mr. Kiser is president, treasurer and general manager. He is one of those business men who know an opportunity and are quick to embrace it. He saw the coming supremacy of the bicycle as a factor of locomotion, when the safety patterns were first introduced, and, with characteristic pluck and determination, entered the field with a product that should always be in the van. The result is shown in a phenomenal success in cycle history. Mr. Kiser personally superintends the entire management of the immense concern of which he is the head, has remarkable executive ability and a faculty for organization, and is a polished and agreeable gentleman. We are permitted to reproduce his pleasant features in this connection.

Digitized by Google

The 1896 Features of the Monarch.

The accompanying illustrations show some of the new features of the Monarch wheels for 1896. Reinforcements are used throughout the frame at every connection, as shown in Fig. 1. The rear forks are made especially strong by the extension of the reinforcements back from the crank

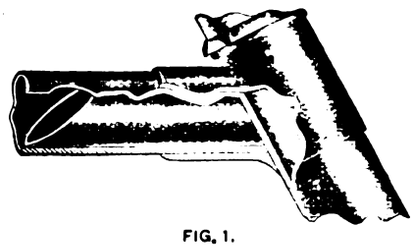

FIG. 1.

bracket connection several inches beyond the point where the forks curve inward to meet the reduced width of the tread. The rear forks embody entirely new details, as will be seen by Fig. 2. The set screw used in tightening the chain has a bearing on the front side of the axle washer and is in line with the rear fork blades, on which the washer slides for adjustment. By this arrangement the nut and washer for binding the bearing cones are kept in perfect alignment with the fork ends, and the thread on the axle is not bruised by the set screw having a bearing on the thread. To the left of the cut will be seen a small sketch

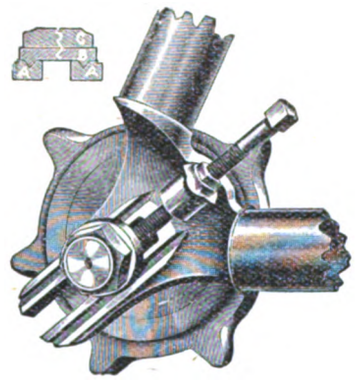

FIG. 2.

showing the special feature of this slide adjustment. Fig. AA represents the fork blades with a small V shaped groove, running the length of the blades. Fig. B is the washer, machined with two V ridges across its face, which fit in the V shaped groove on the fork blades, and Fig. C the axle nut. When this nut is tightened, the washer holds each side of the fork end in perfect line and distributes the weight equally instead of throwing it all on the upper side.

On the chain side the axle is faced with two flat cuts, so as to fit snugly in the fork ends, thereby preventing the axle from turning, as the adjustment is made and the axle

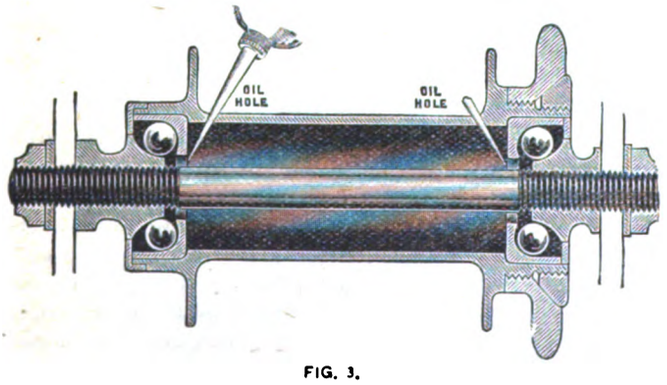

FIG. 3.

nut tightened. The new Monarch hub, shown in Fig. 3, is made from a forging, with oil chambers as one of the main features. These chambers are made to fit over the ends of the hubs, which are machined to the depth of the chambers, so that the finish is flush and the joint tight. The openings of the chambers are accurately gauged, and the cones likewise, so as to admit of a close fit flush wit the end or face of the chamber. By this arrangement there is no exposed surface where dust can accumulate. With these oil chambers frequent oiling is rendered unnecessary, as they retain sufficient oil for a month's use. The detachable sprocket is shown in Fig. 4. The front sprocket consists of a rim which is attached to the crank axle spider

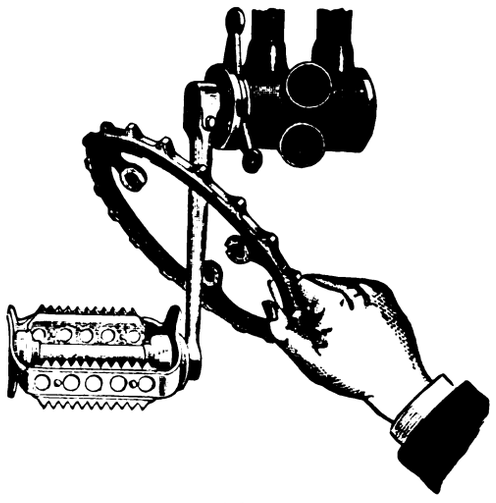

FIG. 4.

with three small bolts. The extremities of the arms of the crank axle spider are seated in circular lugs on the inside edge of the sprocket rim, thereby relieving these bolts of the shearing strain that cuts them off, which has been the only objection to detachable sprockets of this general design. The bolts serve no purpose but to hold the rims in the seat milled out for them. This gives a very neat, smooth sprocket. As the spider arms are flush with the sprocket rim, the sprockets can be very quickly removed or exchanged without removing the pedal or crank. The crank axle, Fig. 5, is a drop-forging with a half inch disk or flange; although the tread has been reduced, the new method of adjustment admits of an increase in the distance between the bearings, thereby bringing the bearings almost directly in line with the rear sprocket

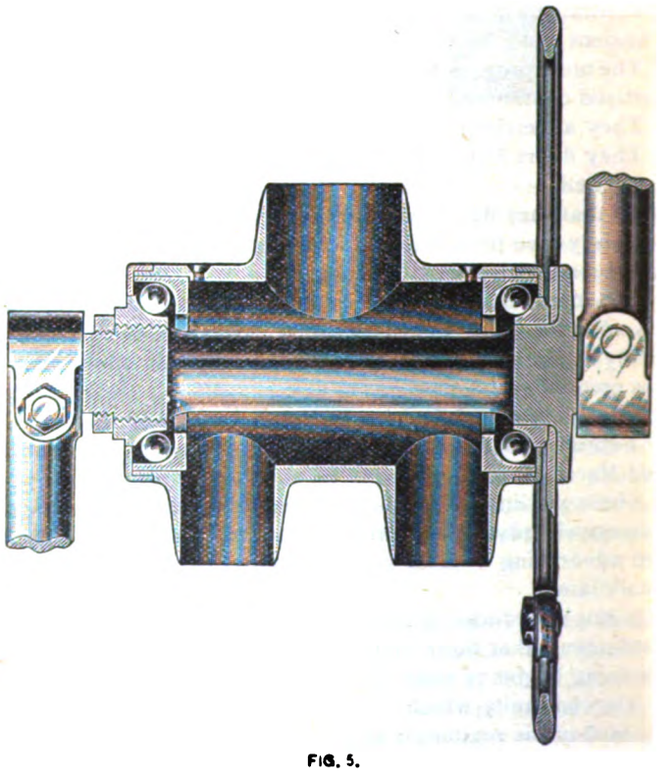

FIG. 5.

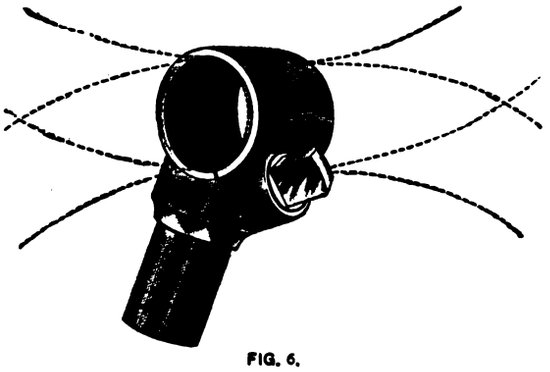
wheel. The adjusting cone on the opposite side is operated upon a left hand thread with a jam nut on the right hand thread. The width of the tread of these machines is 5¼ inches. The company succeeded in reducing the tread to this width, at the same time retaining an equal balanced

Digitized by Google

tread on the center line of frame; that is, it is an equal distance from center line of frame to either end of crank axle, and the point of the saddle is in a line perpendicularly over the center of the tread. They say: "Anyone having the slightest knowledge of mechanics will at once



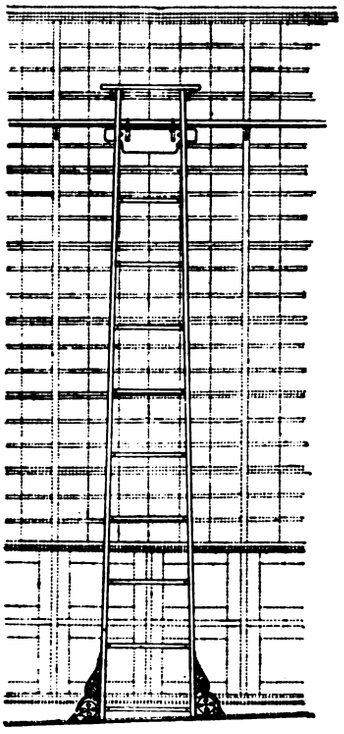


FIG. 6.

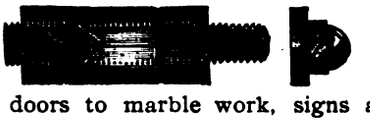
recognize the disadvantages of a crank axle and tread construction that places the right foot, in pedaling, a greater distance from the center line of frame than the left, as it affords the right foot a greater leverage upon the frame than the left, thereby producing an unequal strain on the frame, tending to twist it out of line." Fig. 6 shows the adjustable handle bar, which, by an ingenious device, can be quickly and securely changed to any desired position.

The Bicycle Step Ladder.

Reference has previously been made in these columns to the facilities possessed by the Bicycle Step Ladder Co., of Chicago, for the manufacture of their specialty. Not only are they in constant receipt of letters from customers going to substantiate their claims for the excellence of the Bicycle Ladder, but they meet the requirements of special cases to the entire satisfaction of their patrons. They have placed on the market this year three special makes of the Bicycle Ladders: One for sloping floors; one for use

in cases where a track cannot be laid, and one for turning corners.



Of the ladder first named, an illustration is given herewith. It is the custom in some localities to build stores in which the floor is several inches higher at one end than at the other. In all rolling ladders the guide pole must, of course, be parallel with the track; but if the pole and track ran parallel where the floor was sloping, the guide pole would slant across the face of the shelving so as to seriously interfere with, if not prevent, the removal of articles from the shelves along which the guide pole ran. In the new ladder referred to this difficulty has been met and admirably disposed of by constructing the hooks in such a way that they hold the ladder to the guide pole, and adjust themselves automatically as the ladder is rolled back and forth; slipping up as the lines of the pole and track separate and slipping down as they converge. In subsequent issues the trackless ladder and the ladder for turning corners will be described.

New Brass Expansion Bolts.

The Steward & Romaine Mfg. Co., Philadelphia, Pa., makers of Expansion Bolts, are making for the sanitary plumbers and marble trade, new special brass expansion bolts, some of which have nickel plated movable heads,

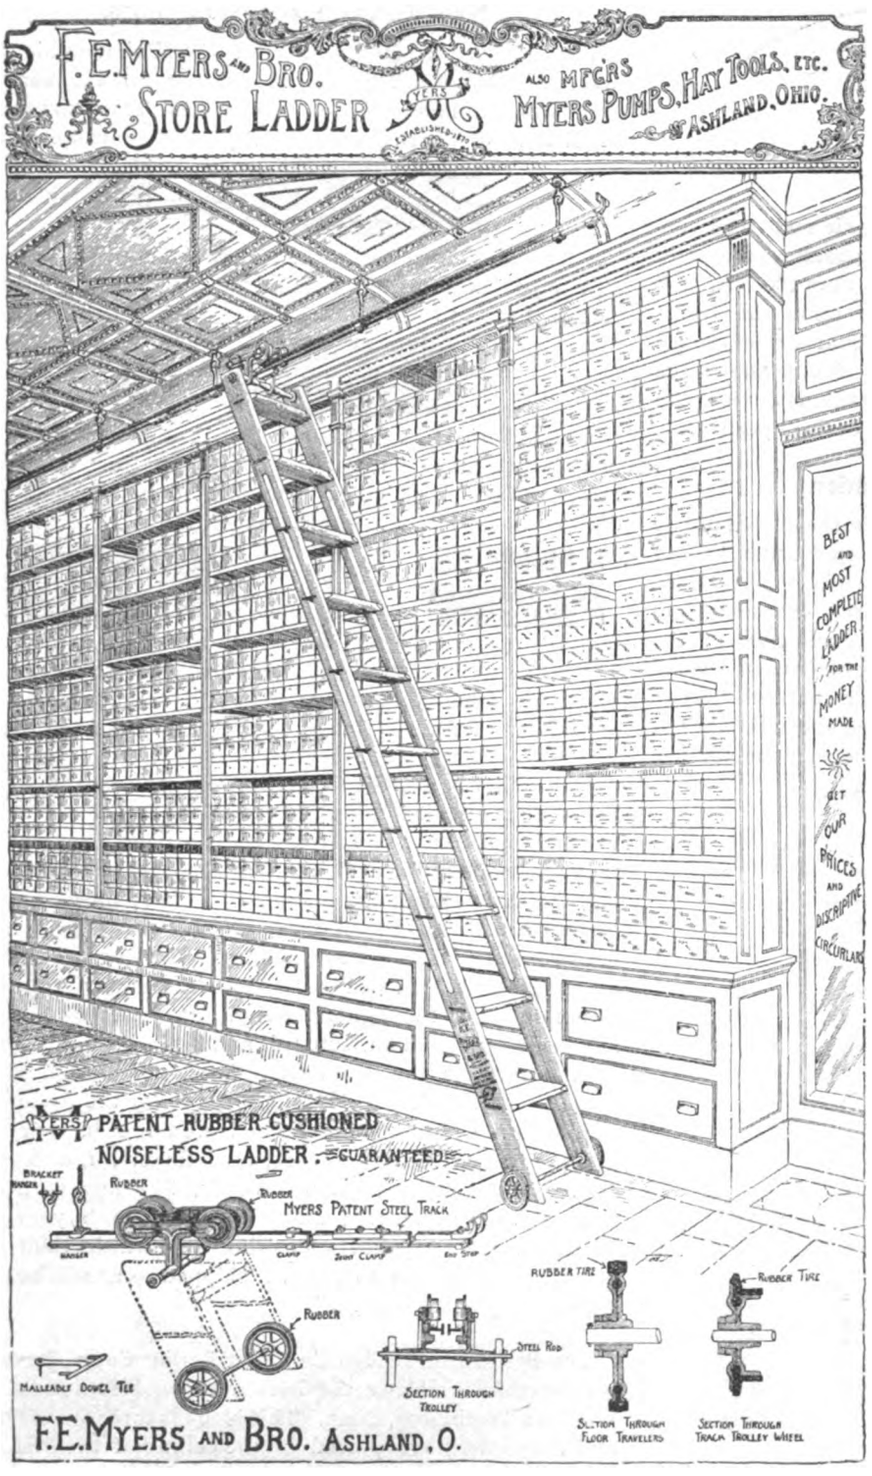
like the cuts shown herewith. They are used for innumerable purposes, some of which are the fastening of closets, urinals, basins to slabs, brackets of all kinds, brass pipes

and hinges of doors to marble work, signs and notices, marble partitions and surbases to other material, soap boxes and racks, which carry medicated paper, and a hundred other purposes in connection with fine hotels, public

building and office work, where a finishing job is required. The cuts herewith show full size of some of the bolts, being made from a No. 9 screw to ⅝ diameter, both single or double. They also make special brass bolts to order.

J. B. Miller & Co., Washington, Pa., have issued a price list of their genuine Miller Hand-Made Grain Cradle. In a word of explanation concerning these articles, they say that they are made of the best second-growth white ash, excepting the rods, which are made of the best hickory. The fingers are all of the natural crook, "making a much stronger finger than the sawed ones. We also use the very best scythes that we can get. Our Cradles have the reputation of being the lightest weight, greatest durability of any grain cradle manufactured, and are commonly called by the farmers the 'famous light-running Miller Hand-Made Cradle.'" The prices they quote for the season are as follows: Cradles complete, delivered f. o. b. your city, $34 per dozen; Cradle Woods, four fingers, f. o. b. your city, $22 per dozen; Cradle Woods, five fingers, f. o. b. your city, $24 per dozen; Cradle Fingers, f. o. b, your city, $1 per dozen. "Jobbers desiring to furnish their own scythes are at liberty to do so; if shipped to us will be hung without any extra charge."

The Berlin Iron Bridge Co., East Berlin Conn., have the contract for furnishing the iron work for Meara Bros. new block, at Torrington, Conn. This block is three stories high, and the girders are placed in the ceiling of the first floor and made sufficiently strong to support the two upper floors. The top floor is a dancing hall, and the structure has been made with the view of making the building as stable as possible, and avoid any danger of vibration caused from the use of the dancing hall on the upper floor.



Sidney Shepard & Co., Buffalo, N. Y., have issued a catalogue on steel milk cans and dairy specialties. The catalogue illustrates milk cans of several makes as well as milk can fixtures, improved creamery pails, nestable strainer pails, milk kettles and milk measures, etc.

The Myers Cushion Tire Store Ladder.

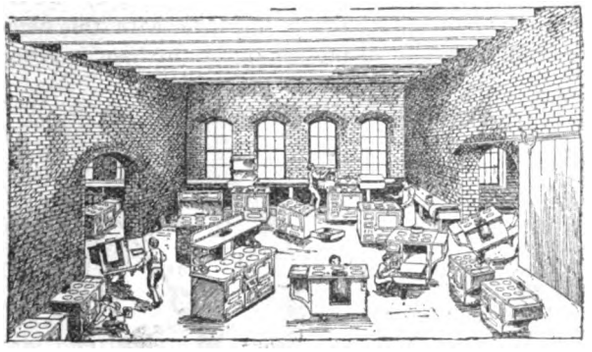
The question of utilizing space in the storeroom is one of great importance to the merchant, as the unoccupied space above the shelving is valuable, and the question of how to utilize this has been solved by the advent of the Store Ladder. It saves time, as the operator can reach various points, and complete an assortment of goods, without descending from the ladder.

The Ladder shown in illustration is the result of diligent effort and years of experience given to its perfection, and

is offered to the trade with a guarantee that it is "a strictly first-class article in every respect, and as now constructed saves room, time, labor and money."

The Ladder is constructed of the best clear Georgia pine, nicely finished filled and varnished, has open panel sides, five inches wide with five-inch steps. Each step is supported at each end with a special malleable dowel tee, which makes strong construction. The width of the ladder over all is twelve inches. The manufacturers, F. E. Myers & Bro., Ashland, Ohio, say: "The track is our well-known double angle high carbon steel rail, which is very neat and strong, and, as clamped together, absolutely straight. It is suspended from the ceiling by means of hangers with lag screw end, or malleable flange plates or wood screws, as illustration shows. The track is placed close to the ceiling, and can be leveled to any uneven ceiling without the least trouble or without any blocking or bridging, the hangers being adjustable up and down. The trolley is self-adjusting, and oscillates so that the four wheels are constantly carrying their share of the load on the track. It is fitted with turned steel bearings; has three-inch anti-rattler wheels with our special rubber tire on tread, and also on flange, as section through indicates. The floor travelers are five inches in diameter, composed of metal sides, with rubber cushion tire, clinched in such a position as to be impossible to come off or get loose. These wheels are placed on a steel axle, which revolves with the one, while the other runs loose. In this manner the ladder will adjust itself to the floor (see sectional drawing.) The rubber tires are of the best quality of material employed in bicycle use. One of the important features of the Myers Patent Store Ladder is its construction throughout, designed in simple form, so that with the instructions furnished by the manufacturer, the purchaser can place this ladder without employing skilled help, as it is entirely adjustable in every way, no riveting or machine work of any kind being required after they are sent out. The only thing necessary is to fasten the hangers to the ceiling. The hangers are adjustable up and down, making it easy to level the track."

The Buescher Mfg. Co.



L. G. Winn, representing the L. A. W. Lock Co., a part of the Bellis Bicycle Co., of Indianapolis, has returned to that city after a couple weeks' visit in this city. His business here was to note the kind of workmanship turned out by the Buescher Mfg. Co., and this having proved eminently satisfactory, to place an order for 100 000 (or more) patent combination bicycle locks. The device is simple, yet effective, and the demand for it will be large. The lock proper consists of three tumblers, and at least 75,000 different combinations can be made. The lock is of aluminum, and is useful as well as ornamental. The factory has already begun working overtime (till 9 P. M.) several nights of the week, in order to fill their contracts. One thing worthy of note is the superiority of work done by the Buescher company over that of another house which had been making the locks for several months. The local company not only improved the finish wonderfully, but redesigned the general shape of the lock, and greatly improved it.—*Elkhart (Ind.) Review.*

The coal mines of Great Britain produced 1,410,555,360 tons during eight years from 1887 to 1894. The iron ore mined during the same period amounted to 1,033,204,769 tons.

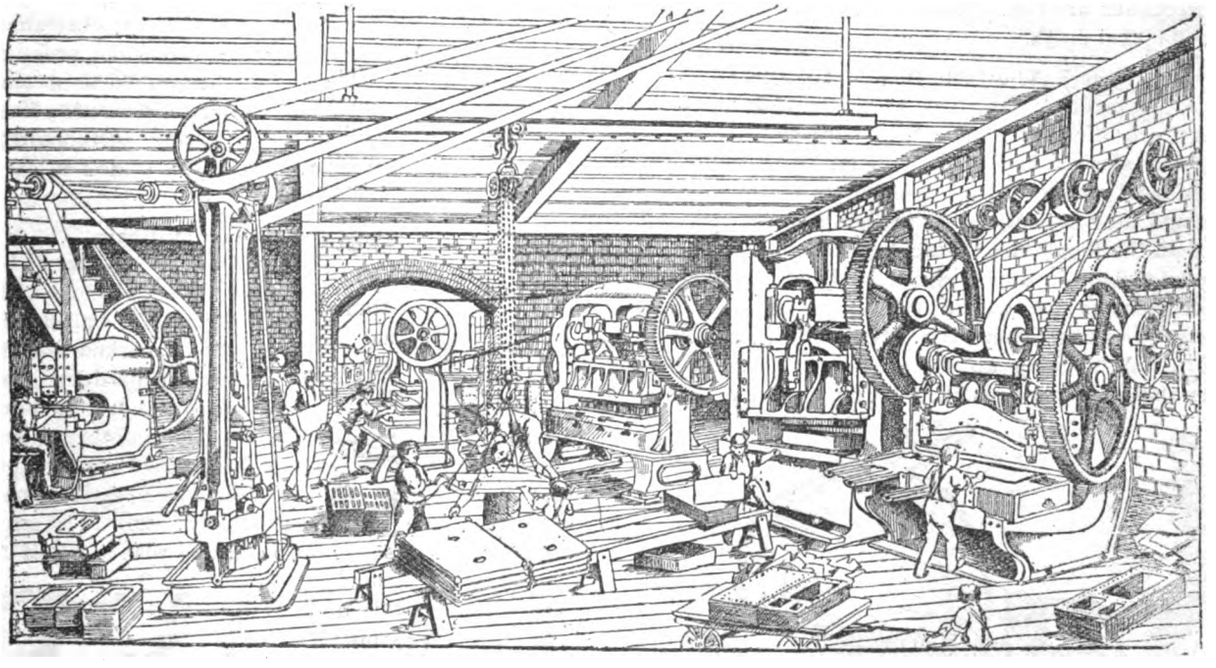
The Peninsular Stove Co.'s Steel Range Plant.

The Peninsular Stove Co., Detroit, Chicago and Buffalo, have taken up the manufacture of steel ranges on a large scale. For years they have been classed among the leading makers of cast iron stoves and ranges, as well as hot air furnaces, and their works at Detroit have kept pace with the developments in cast iron stove making. With



characteristic energy they have not only added a steel range plant to their works, but have sought to make it one of the best equipped establishments of its kind. It was perceived that a weak point in many steel ranges is the defective manner in which the various parts are put together. Steel ranges require riveting, and riveted parts should fit accurately in order to avoid seaming or straining the steel sheets. This can only be done by very careful work in drilling or punching the holes. It is possible for experts to mark the sheets and drill or punch each hole singly, and do the work quite accurately, so that the parts thus prepared will fit each other and make a thoroughly well finished range. But such workmen are rare. To avoid dependence upon individual skill, modern machine tool makers have devised the gang punch or press by which almost any number of holes can be punched at one operation, and punched accurately every time. Corresponding parts punched in this manner cannot fail to fit. Other machines have also been devised to take the place of skilled labor in other departments of sheet metal working which are equally essential in turning out accurate work. Parts so made fit together with mathematical precision, and not only as regards one range, but every range turned out day after day. The investment of the large amount of capital required for the installation of such machinery precludes its common use, but the Peninsular Stove Co. did not hesitate to make the investment when the manufacture of high class steel ranges was decided upon as a branch of their business.

The accompanying cuts show the character of the company's steel range plant. The building used for the purpose is 100 by 150 feet, two stories high. The press room contains a 1000-pound drop hammer, a six-foot squaring shears, five presses and other auxiliary machinery. The steel sheets are first taken to the shears and cut to the required size, perfectly squared ready for the presses. The

largest press weighs 17½ tons, is used for very heavy punching and forming. On it, for instance, the front and back of a range are completed in two operations each. They are perforated with 208¼ inch, which are as easily punched as one hole. The second press cuts out the oven, low closet and flue openings. The smaller parts of the range are perforated in the first press, notched in the second and formed in the third. The other two presses are used for making high shelves and warming closets, perforating all holes at once. Everything pertaining to a complete range is prepared to be put together in the press room, requiring no fitting afterward. The parts of the range requiring two or three or more operations are passed from one machine to another until completed and ready for the workmen who do the riveting. The large dies used in the great presses, weighing up to 4000 pounds each, are put or taken out by means of a chain block which runs on a traveler the length of the dies, placed on horses, but a few minutes being required to change a die. These dies are so skillfully made and adjusted that they can be easily set and repaired.

The largest press punches 200 sheets an hour, with 208 holes to a sheet. The second press punches 300 sheets an hour, and the other presses from 300 to 400 an hour. When all the presses are in operation the parts can easily be produced for 100 steel ranges a day.

HARDWARE costs only One Dollar a year.

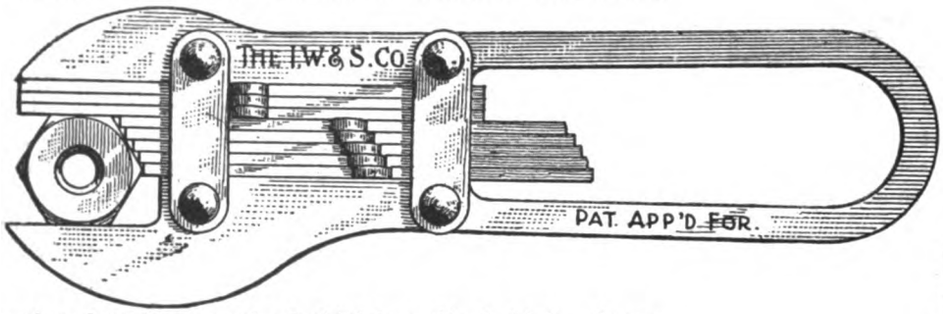
ILLUSTRATED BICYCLE NOVELTIES.

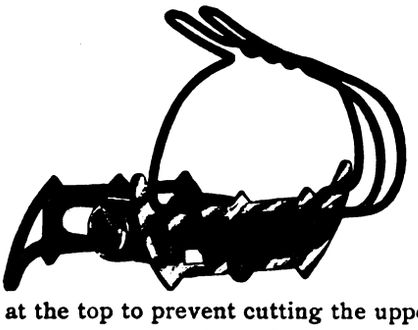


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

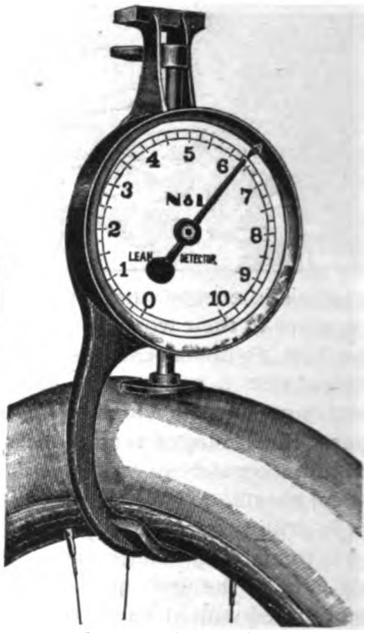
New Bicycle Wrench.



The Indianapolis Wrench & Stamping Co., Indianapolis, Ind., are offering the Self Adjusting Wrench here shown. It is made in steel and in malleable iron, with a

series of tumblers, each of which is 1-16 inch thick. In use the operator places the wrench against the nut—the tumblers being forward—and pushes, making the wrench adjust itself snugly to the nut. It is stated that the wrench possesses the following advantages: that it has great strength through the centre, which is the heaviest point of strain; that having no screw to work loose it remains firm on the nut; that there is no lost motion and that the wrench will not yield to the strain, allowing the nut to slip. The manufacturers remark that the wrench is novel in construction, handsome in appearance, light, strong, quick of adjustment and durable. The malleable iron and drop forged steel wrenches are furnished in both white nickel and in polished nickel finish.

Theim's Adjustable Bicycle Toe Clip.



T. H. Cranston & Co., Nos. 58 to 60 Wabash Avenue, Chicago, are offering the Toe Clip here shown. The toe embracing section and the side guard is formed of one piece of steel rod, so there is nothing to become loose and rattle, and they are adjustable in height and width to conform with the shoe. The same bolt that fastens them to the pedal tightens the adjustment, and it is explained that the side guard is so arched as to give the greatest amount of strength, so as to stand the strain of a sudden stop or the hard pull in going up steep grades. It is remarked that by their peculiar construction they present a long vary-

ing surface at the top to prevent cutting the upper, and are made double at the bottom where they are attached to the pedal. Only a screwdriver is necessary to attach them. They are heavily plated to prevent rusting, and weigh two ounces per pair.

Leak Detector.

Horton, Gilmore, McWilliams & Co., Nos. 172 to 176 Lake Street, Chicago, are introducing the Leak Detector, an instrument designed to detect leaks in bicycle tires, herewith shown. Bicycle repairers often have considerable trouble in finding out whether a tire is thoroughly airtight, even with the old method of submerging the tire in water. If there is any leak in the tire, with this device it is soon indicated by a movement of the hand. After the

tire has been repaired and inflated, all that is necessary is to place the instrument on the tire as indicated in the cut. The pointer "A" is turned until it comes opposite the hand. The tire is then set to one side and the repairer goes about his other work. Should there be any leak, the change in the position of the hand will tell the story. The device thus obviates the danger of an improperly repaired tire being sent out. Another use of the instrument is to insure riders who may desire it the same pressure at all times. The leak detector can be applied to a wheel and tire then inflated to any pressure desired. It is nicely nickel-plated and packed in a strong pasteboard box. It weighs about fourteen ounces, and is sold at $4 each. Special prices made for quantity.

Fanning Ball-Bearing Chain.

The Fanning Ball-Bearing Chain Co., Keokuk, Iowa, are offering the Ball-Bearing Chain illustrated herewith. It is referred to as an extension of the idea of ball-bearings in a bicycle to the chain as well. It is remarked that the chain is made of the best steel thoroughly hardened, as having perfect ball-bearings on the sprockets and as doing away with friction to an extent not attained in other chains. The point is made that the chain is standard one-inch pitch and that it does not require special sprockets. The makers state that the chain runs easily; that it is strong and durable; that it stretches but little; that it is self-cleaning,

and does not clog with dust or mud; that it will run perfectly without lubrication; that it does not catch or bind on the sprockets; that it makes no noise, and that it does not snap, grind or jerk. The chain is also referred to as a great assistance in hill climbing and an ideal chain for use on muddy or dusty roads. For general machinery, the makers remark, it supplies chain which will stand a large amount of work, allowing high speed and saving much power.

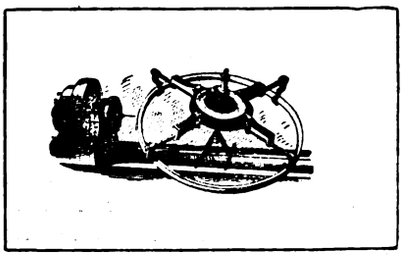
Nonotuck Wheel Jig and Rim Driller.

Taintor & McAlpine, Easthampton, Mass., are offering the Wheel Jig and Rim Driller as here shown. It is remarked that this tool is designed for the double purpose of spacing and drilling rims and setting up wheels. To set up a wheel, put the rim in the jaws of the jig, and revolve to see if it is true. In case the rim is not true, it can often be made to run so by turning the rim around in the jig, and if it is flat at any one point, by placing that point directly over

FIG. 1.



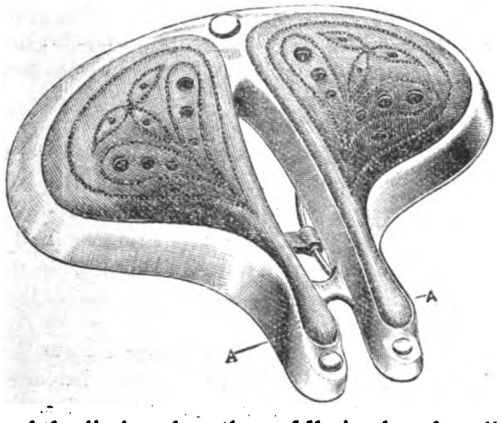


FIG. 2.

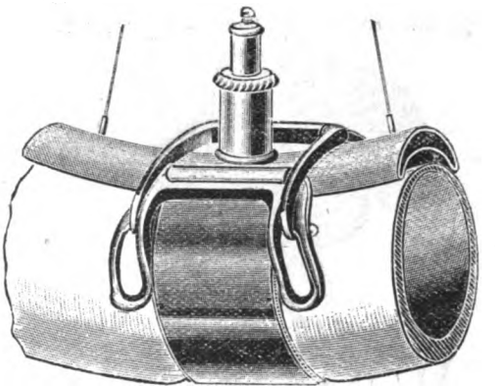
one of the jaws and forcing it into shape. Then place the hub on its own axle and the bearings between the centres, taking care to set it in line with the rim. Put in the spokes, screw down the nipples, tightening them on each side of the jaws first. If the rim is a true one and proper care is used the wheel should be very nearly true when taken out of jig. The drilling of rims can be done in several ways. Fig. 1 illustrates one method, viz.: on a lathe. It will be noticed that the jig has been taken from the frame, and by means of the long screw-centre, has been attached to the standard, which is furnished with a jig. This standard is designed to set on the bed of the lathe and notches should be filed in base of the standard to match the ways on the lathe bed. This jig can also be used under an upright drill. The company state that they can also furnish an attachment which screws on the side of the jig frame to guide a drill so that the rims can be spaced and drilled at the proper angle with a common breast drill.

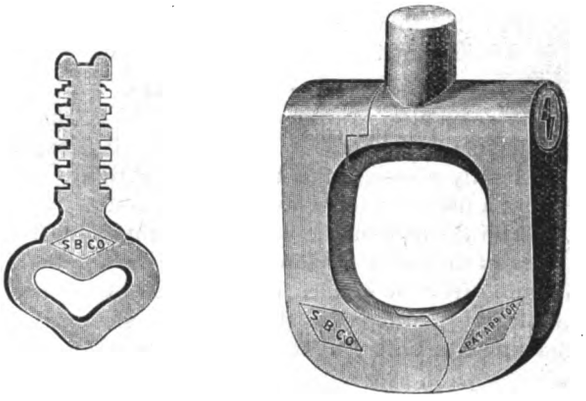
The Hollenbeck Saddle.



Frank A. Hollenbeck & Co., Syracuse, N. Y., are offering their 1896 Saddle as shown here. The frame is made of aluminum, fitted with coil spring for ladies' use, and flat spring for the use of men. The pommel is cut away, but leaving, it is explained, enough to hold the rider centrally on the seat, and also to help guide the wheel. The outward curve shown at A, is referred to as aiding the rider to keep the position on the seat instead of sliding forward, as allowing

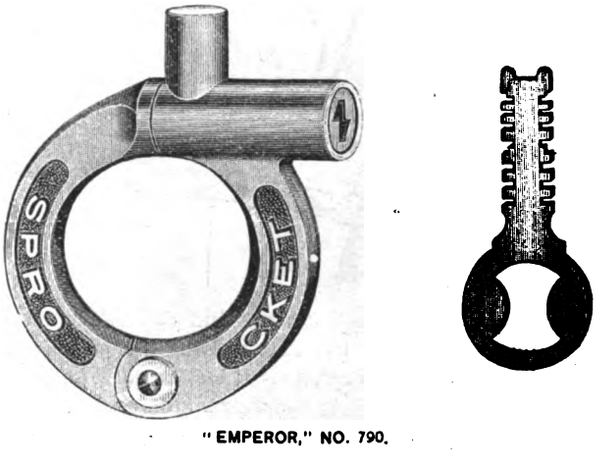
free use of the limbs when the saddle is placed well ahead and over the pedals, and as preventing chafing. The point is made that at the rear the saddle is higher on the outsides than in the centre, avoiding a spreading pressure. This saddle is made in two weights, 17 and 23 ounces.

A New Tire Clamp.



J. M. Schwerin & Co., Newark, N. J., are offering for introduction to the bicycle trade a new safety Tire Clamp. It is made of a ¾-inch strip of brass connected to a steel casing which fastens on the wooden rim of the wheel, being drawn tight by a re-inflation of the tire. In use a rubber strip is placed directly over the puncture and fastened down with the clamp pressed snugly against the tire until

it is again inflated. It is mentioned that the clamp will fasten over any part of the tire's circumference, and is useful in all cases where single or double tires require mending; also that by using several of the clamps and reversing them alternately, quite a large tear may be mended. They can be had of the retail trade for twenty-five cents each.

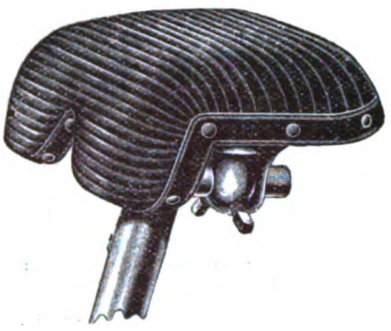


New Sprocket Locks.

The illustrations herewith show two new Sprocket Locks that are being introduced by the Slaymaker-Barry Co., Lancaster, Pa., for whom John H. Graham & Co., No. 113

HERCULES, NO. 794.

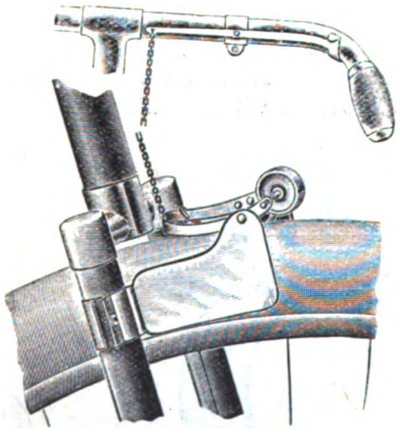
Chambers Street, are sole sales agents. The Hercules, No. 794, has all parts machine-fitted. It has a self-locking spring and is spring opening, with rolled bronze metal rod bolts, formed and milled. It is remarked that the springs are indestructible and made of phosphor bronze. The lock is provided with two nickel-plated rolled steel



"EMPEROR," NO. 790.

keys, pressed and milled, with 200 available changes. The locks are furnished in the following finishes: Bronze metal, bronze metal nickel plated, and all aluminum nickel bronze alloy. The construction of the "Emperor" No. 790, is similar to that of the "Hercules."

Digitized by Google



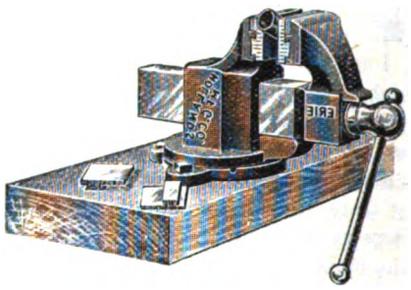
The Detroit Easy Seat Saddle.

The Victor Mfg. Co., Detroit, Mich., are introducing their Detroit Easy Seat Saddle as shown in the accompanying cut. It is on a pivot so as to allow it to rotate on a horizontal plane. The manufacturers explain that the saddle is pivoted to prevent the rider from being lifted forward off the seat, and also to prevent the weight of the body being thrown on the wrists. It is remarked that when the right leg is down the left one is up, and vice versa, and that in operation half of the seat is pushed back out of the way and the other half is pushed further under the rider, thereby relieving the strain on the wrists as the rider is not thrown forward, getting at the same time the benefits of the flat seat. The makers state that with the use of this saddle there is no strain on the wrists or the delicate parts; that there is no discomfort of any kind on long or short rides; that there is no impediment to free limb motion; that there is comparatively no frictional wear on clothing; that there is no tendency to slip forward, and that the saddle is cool and perfectly ventilated.

The Stephenson Bicycle Brake.

The Mascoma Mfg. Co., East Lebanon, N. H., are offering the Bicycle Brake as shown herewith. It is explained that by lightly pressing the thumb piece tightly on the handle bar a little friction wheel is put in contact with the gear, and on the axle of the wheel is a right and left screw which draws the two side plates of the brake together, giving a double friction surface on the sides of the tire, the brake releasing as soon as the pressure is moved. The manufacturers remark that the brake is especially desirable for ladies' wheels, as it requires no reaching and straining to grasp the brake, merely a few ounces of pressure on the push button; that the plates come against the tire where no other wear comes, and away from mud and grit; that the brake weighs but a few ounces and can be put on any bicycle, oval or round forks; that it uses the waste power of the bicycle to brake with; that it leaves the front of the wheel and handle bar clear, so that bundles, etc., may be tied on as usual; that the brake is nickel-plated and that directions for attaching accompany each brake.

"Sure Alarm" Bicycle Signal.



The "Sure Alarm" Bicycle Signal Co., No. 1046 Chestnut Street, Philadelphia, are introducing the "Sure Alarm" Bicycle Signal as herewith shown. It consists of three bells attached to a ring which can be attached to any size metal hub. As long as the wheel is in motion the bells ring, and when one desires to do so the signal can easily be removed. It is a protection for both the pedestrian and the rider, as it is a constant warning to the former and no claim can be made in case of an accident that an alarm was not given, and furthermore, the danger of collisions is greatly lessened.

Patented August 28th, 1894.

Bicycle and Pattern Makers' Vise.

The accompanying illustration represents a newly designed Vise for bicycle, pattern and tool makers, and is made by the Hollands Mfg. Co., Erie, Pa. This is a filer's swivel base vise, with detachable rubber, copper or lead jaws. When the rubber jaws are inserted the lightest tubing and the finished work can be chipped or filed without marring. This latter, it is remarked, is a distinct advantage over other vises and will be readily appreciated by manufacturers and repairers of bicycles. Further information, circulars, etc., may be obtained on addressing the manufacturers.

Ayer & Wolf, No. 919 Betz Building, Philadelphia, have favored *Hardware* with samples of the Maxfield Bicycle Grease, for which they are general sales agents. It is intended for the bearings and all wearing parts of a wheel. They promise that "a wheel once lubricated with it is good for a season's run." It is put up in bulk for manufacturers and repairers of wheels, and in suitable boxes for the retail trade.

J. Bardsley, Nos. 147, 149 and 151 Baxter Street, New York, is placing on the market a low priced line of Wood Door Knobs. These have cast iron shanks, capped or covered with bronze shells. The heads are fastened to the shanks with Mr. Bardsley's patented fastening, in the same manner as the higher priced goods.

V. P. Humason, No. 80 Chambers Street, New York, has been appointed New York representative for the Eagle Sterling Co., Glastonbury, Conn., manufacturers of Sterling Silverware. The company are to be congratulated upon securing the services of an agent so live and energetic as Mr. Humason.

The Peninsular Stove Co., Detroit, Mich., are sending their friends an attractive cut-out card showing their Peninsular Wrought Steel Range in practical use. It has a standard that holds it in position, and makes an ornament for desk or show case.

NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.

NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

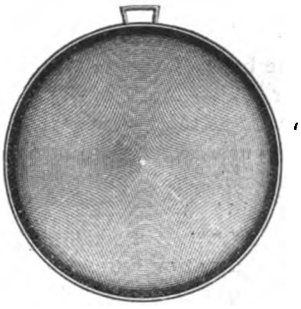
The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Kretsinger Cut Easy Hoe No. 80.

The Iowa Farming Tool Co., Fort Madison, Iowa, are offering the Kretsinger Cut Easy Hoe, as shown here. It is in the same shape as the company's A X crucible socket

hoe, has a 7½-inch blade, and with a curved and beveled edge. It is explained that this hoe cuts all the time, when moved to the right or the left, or towards the operator; that it is sharp; that it is a hoe and not a special add tool, and that it will do all a hoe can and more.

The Home Electric Gas Range.



The Electric Gas Stove Co., Detroit, Mich., are offering the Home Electric Gas Range, shown in the illustration. This range has a closed top, carrying away, it is explained, all products of combustion and all odors direct to the chimney flue. The burners are guaranteed to be durable and economical. The body is made of one piece of cold rolled steel. The ovens are of standard size, allowing the use of all kinds of pans used in ovens. The baking oven slides out of the front of the range and is also made of one piece of steel. There are no openings, thus preventing entrance of the products of combustion. A complete flue arrangement surrounds the oven, as will be seen by reference to

the illustration, giving it, the manufacturers remark, the benefit of all the heat of the burner, and keeping it at an even temperature. The bottom oven plate is protected by an extra piece of sheet steel with an air space between. A double jetted burner furnishes the heat. Asbestos mill board lines the sides of the oven, thereby retaining all the heat around the oven. The oven slides are made of heavy re-tinned wire. A large drip pan and meat rest is furnished with each range.

The Perfect Cooking Mat.

Forshee & McMakin, Miami Building, Cincinnati, Ohio, are offering the Perfect Cooking Mat, as shown in the accompanying illustration. It is described as made of white indestructible and thoroughly fire proof material on one side, while the other is of steel, adding to the strength of the mat and fitting it at the same time for its various uses. The steel side has the outer edge turned up, which

prevents the hot fat from running off into the fire. The mat can be used on a grate fire, gasoline or gas stove, wood or coal ranges. It is said to be valuable in the oven, and will prevent fine pastry from baking too fast on the under portion. It is also used in the laundry to prevent the iron from soiling by coming in contact with the flame or getting too hot. The round mat shown in the illustration is ten inches in diameter, and the oblong mats are ten inches wide and fifteen inches long.

Water Meters.

The Buffalo Meter Co., No. 363 Washington Street, Buffalo, N. Y., are offering the Water Meters shown in the accompanying cuts. Fig. 1 shows the Niagara Meter, with

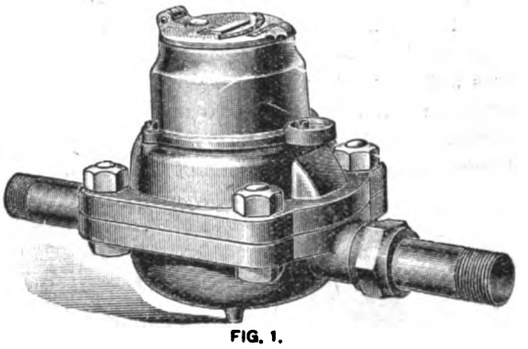


FIG. 1.

a new square flange case, held together by four ½-inch bolts. It is remarked that this meter is much more easily taken apart for examination or repairs than the old style meter with eight small bolts. It is stated by the makers that there is no difficulty in making the joints tight under

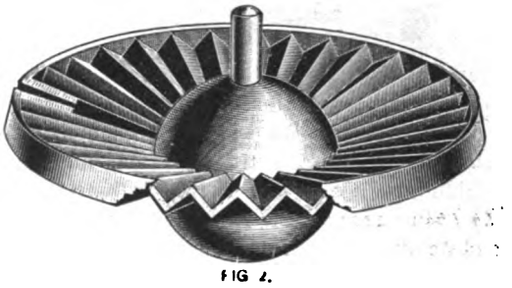

FIG 2.

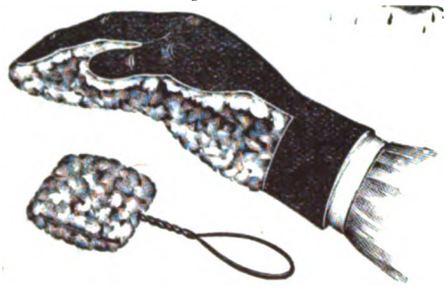


300 to 500 pounds pressure. Fig. 2 represents a new all-metal meter with corrugated disc with hollow ball. It is made from gun metal. It is described as strong, light, sensitive and water packed and, it is stated, is not injured by

Digitized by Google

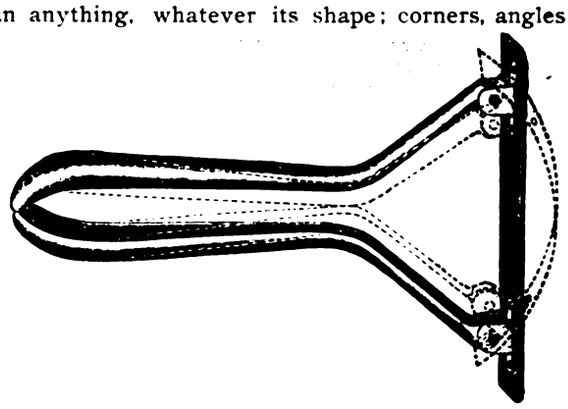
hot water or sediment. The recesses in the web form a water packing and also reduces the liability of stoppage to a minimum.

Park's Stove Polishing Mitten and Dauber.

Parks & Parks, Troy, N. Y., are offering the Stove Polishing Mitten and Dauber as shown here. It is made with a soft front of durable sheep skin tanned with the wool on,

and the back of the mitten is of water proof cloth. The dauber is also made of sheep skin with the wool on, and is so shaped as to readily get the blacking into the crevices and corners. The manufacturers state that with these a woman can black and polish a stove without soiling her hands.

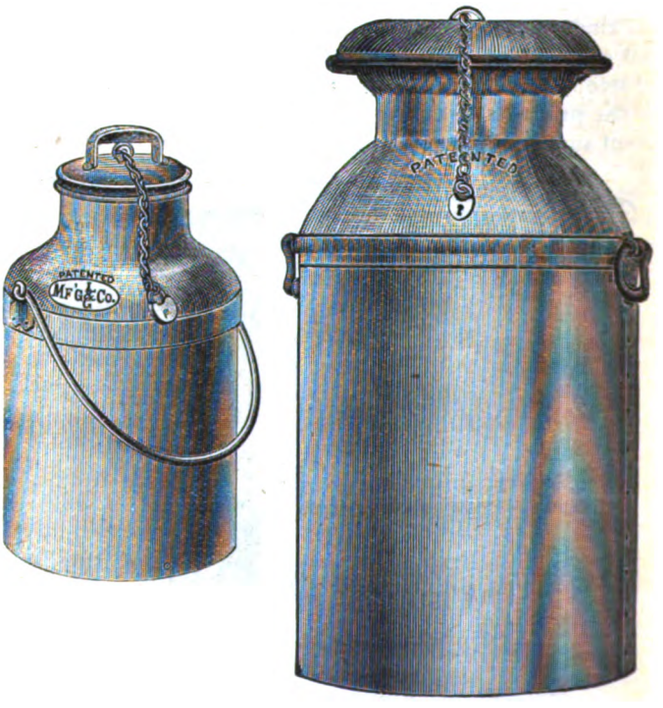
Portable Striking Bag.



The illustration herewith shows a Portable Striking Bag offered by the Standard Typewriter Exchange, Nos. 604 and 606 Chestnut Street, Philadelphia, Pa. The striking bag is composed of an iron base, weighing 75 pounds, to which is attached a heavy coil steel spring having a small iron casting driven in one end and a hickory reed bolted in the casting. The reed is reinforced at the base by a steel rod running through the center. To the top of the reed an iron cap is loosely fitted, and a leather striking bag encasing a rubber bladder is laced to the iron cap. The leather bag has four leather streamers depending from it, terminating in straps, which are drawn down tight and secured by buckles to a loose iron collar encircling the reed. It is explained that when the bag is struck a glancing blow, it revolves around the reed, and thus relieves the strain which would otherwise be brought to bear, and that the tension on the reed is further relieved by the natural play of the bag on the iron cap. The working of the bag is described as follows: When the bag is struck a blow, the steel spring makes it return to an upright position, and that the return of the bag is very rapid; the effect is similar to having an opponent in front of the person exercising.

The heavy base is to prevent the bag moving from any desired position, although after the operator has finished with it, the entire article may be moved and placed in a corner or a closet. It is pointed out that the bag has many movements which are not found in the ordinary striking bag, and presents numerous new and interesting features. The makers state that it can be operated in any room; that having no connection with walls, floor or ceiling, it cannot affect the plastering, and is practically noiseless.

Flexible Pot and Kettle Scraper.



F. E. Kohler & Co., Canton, Ohio, Ryan & Neefus, Eastern agents, No. 75 Chambers Street, New York, are putting on the market their Flexible Pot and Kettle scraper, illustrated herewith. The blades are made of clock spring steel and the handles of bright spring steel, the weight being but two ounces. The manufacturers remark that it will clean anything, whatever its shape; corners, angles and

flat surfaces in any kind of kettles, skillets, sinks, chopping bowls, tables, cupboards, moulding boards, rolling pins, bread pans, pie pans, pudding pans, or even fish are easily cleaned by it, and it will be very useful in scraping the wall in house-papering time. The point is made that with the use of this instrument it is not necessary to soil the hands by putting them in hot or greasy water or other offensive contents of the vessel to be scraped, and all danger of cutting or burning of hands, or tearing of finger nails, is avoided by the use of the scraper. Packed in boxes of one dozen, and cases containing one gross.

Locking Attachment for Milk Cans.

The Lalance & Grosjean Mfg. Co., No. 19 Cliff Street, New York, are offering a locking attachment for railroad milk cans which they have fitted to their L. & G. style of milk cans, as seen in the accompanying illustrations. The device is simple, consisting of a steel chain secured to a staple on the back of one side of the milk can, the chain passing through the handle of the lid and being fastened by means of a padlock to a second staple on the front of the

can, thus making its contents absolutely secure. This new feature has been designed more particularly for use on milk cans intended for export, in which it is often convenient to pack other articles, which can thus be carried safely. It is also adapted for use in certain circumstances where cans are sent by railroad and where there is any risk of the contents being abstracted in transit.

Tourist's Curling Irons.

The Geo. L. Thompson Mfg. Co., Nos. 6126 to 6130 La

Digitized by Google

Salle Street, Chicago, are placing on the market the Tourist Curling Iron, as shown here. The irons are nickel plated, with antique oak handles, folding especially for the use of

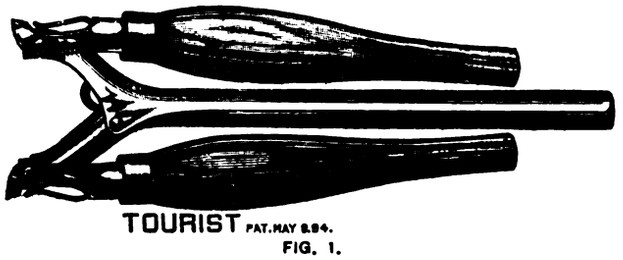


FIG. 1.

travelers, thus occupying a comparatively small space. The point is made that the irons can be heated over a lamp chimney, as in Fig. 2, and therefore serve the purpose of

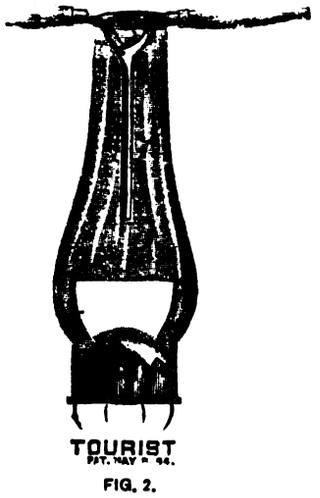

FIG. 2.

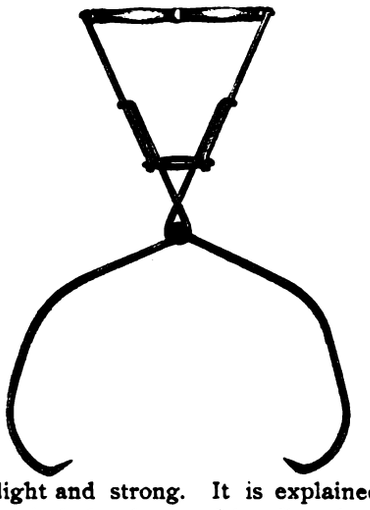
a curling iron and heater combined. The same curler is made with nickel plated tips on the handles, and is catalogued as the Traveler Folding Curler.

White Mountain Grand Refrigerator.



The accompanying illustration represents the features of one line of White Mountain Refrigerators, manufactured by the Maine Mfg. Co., Nashua, N. H. They are described as having double boxes, dead air space, patent trap, special non-conducting package, overlapping doors, galvanized ice racks, improved galvanized shelves, polished zinc lining throughout, and with no wood exposed in the interior. As shown in the cut, the bottom of the ice chamber and the waste pipe can be taken out, cleaned and replaced without

effort. The front base swings up to facilitate the handling of the drip pan, and the legs have casters which will not drop out. It is stated that double circulation is provided for; that the refrigerators are perfect food preservers with positive dryness; that they are economical in the use of ice, and that they are free from impure air. They are finished with bronze trimmings, artistic carvings, and are well finished.

Sure Grip Ice Tongs.

The cut herewith illustrates the Sure Grip Ice Tongs, offered by F. A. Herrick & Co., Jackson, Mich. They are made of tinned steel wire, which prevents rusting, and

makes them light and strong. It is explained that they are operated entirely by the wood handle; that by pressing down the jaws are opened, and that by pulling upward the points are closed firmly on the ice. The tongs are designed for family use, and the manufacturers state it is impossible to drop a piece of ice while carrying.

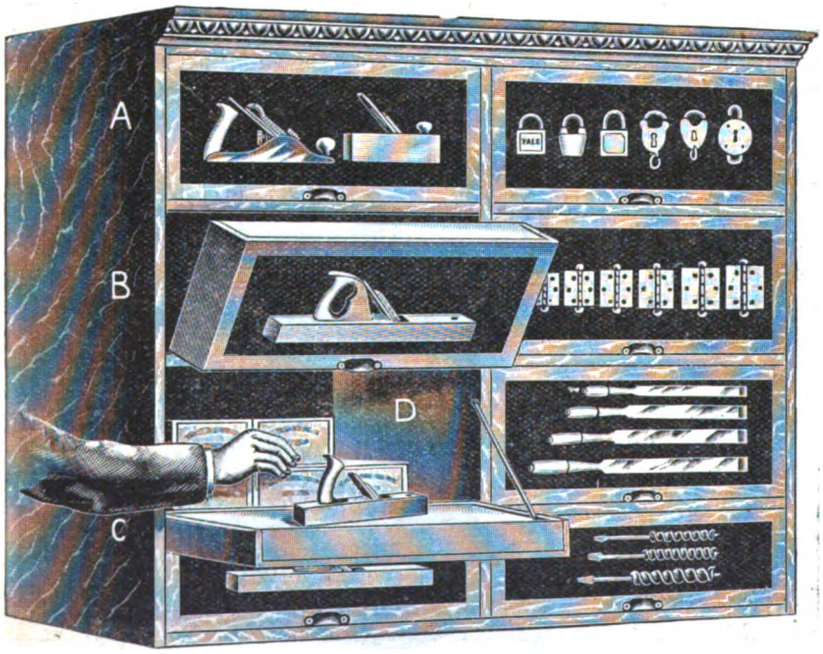
The Stimpson Computing Scales.

The Stimpson Computing Scale Co., Tecumseh, Mich., for whom W. H. Jacobus, No. 90 Chambers Street, New York, is agent, are offering Computing Scales, as illustrated herewith. The scales are finished in wine colored baked enamel, with all bearings of tool steel, pivoted, and with a leverage of 20 to 1. The Grocers' Scale, as shown here, has a seamless brass scoop, and is made with either marble or iron platform as desired. The tare beam and the frame of the upper beam are nickel plated. The poise and computing table of the upper beam are of aluminum. The lower beam is for tare and the upper one is the weighing and computing beam; this beam being pivoted at the ends so as to turn over and show the other side. The price per pound is given in the first column to the left on the poise, the prices on the side shown being from three to seventeen cents, and on the other side eighteen to forty cents. The weighing and computing capacity of the scale

is fifty pounds, and at one operation both the weight and money value of any quantity up to and including fifty pounds at any price ranging from three to forty cents per pound is instantly shown on the computing beam. By the use of the tare beam one hundred and twenty pounds can be weighed on the scale. The makers state that the scale possesses the following points of excellence: That both weight and money value are given by the movement of one

Digitized by Google

poise; that the correct weight is shown to both buyer and seller; that in selling all articles such as butter, cheese, etc., which cannot be cut to exact weight asked for by the customer, the correct weight and money value of the article is given, and that the poise can be set at a given value and instantly shows the correct weight in pounds and ounces or it can be set at a given weight and will at once indicate the correct value as both weight and money value are given by the movement of one poise. They also make a Butchers Scale which embodies all the valuable features of the grocers scale described.



Calling Card Holder.

The A. J. Phillips Co., Fenton, Mich., are introducing a novelty in the shape of a Calling Card Holder, herewith illustrated. It is made of natural oak, finished with two coats of varnish, and is designed to be fastened to the front door by a round head nickel screw. The cut in the wood holds the cards. The makers say: "This is for callers to use when you or your wife are not 'at home.' Ladies do not have to 'hump over' and poke their cards under your door, but are enabled to maintain a dignified attitude while depositing their card, and depart feeling pleased that you were not at home, assured that their card will be well cared for and with a determination to have card holders on their doors if they can find out where they are sold." They list at $1.20 per dozen and are packed two dozen in a box.

Hardware Shelving.

The J. D. Warren Mfg. Co., Chicago, with branch office at No. 10 Warren Street, New York, have developed a principle of Hardware Shelving, as illustrated her , for the advantage of establishments that do both wholesaling and retailing, and who wish to utilize the display of samples in the retail room to sell their wholesale customers from. This is made possible, it is explained, by having every article sampled in the patent glass front drawer that is arranged in this new device. The drawer is partially drawn out and tilted down, thus forming a shelf on which to display the goods. It is held in place by an adjustable sliding hinge, a device of the company's. It is remarked that the shelving back of this is built sufficiently deep to carry in original packages all classes of goods such as hatchets, hammers, chisels, files, butts, etc. In addition to this feature of carrying original packages of goods back of the sample display tilting drawers, they have separate pigeon hole cabinets that slide in the space between the shelves so that each size chisel or file or any line of goods has a compartment by itself in which loose stock can be carried for the accommodation of either the retail or wholesale trade.

What the Clerks Want.

The Retail Grocers' Clerks Union of Utica, N. Y., asks the grocers to enter into the following agreement:

I, the undersigned, do hereby make the following agreement with the Retail Grocers' Clerks Union, No. 137:

First—All employes of my store shall be members of the above-mentioned union, except bookkeepers.

Second—A working day shall consist of 11 hours; Friday, 12 hours; Saturdays and the day before legal holidays to be excepted.

Third—Six working days to be considered a full week, and on holidays the working hours from 7 A. M. to 12 M. shall be considered a full day's work.

Fourth—Shortening of hours shall not be the cause of reduction of wages.

Fifth—All over-time to be paid at the rate of time and a half.

Sixth—Store to be opened at any time in the morning by the employer, but clerks to commence work at seven o'clock.

Seventh—I especially agree not to open my store on Sundays and after 12 M. on legal holidays for the sale of groceries. This shall not be construed to prohibit the sale of newspapers and candies.

Eighth—This agreement to go into effect on the first day of March, and to remain in force for one year.

How the men who are at the head of the retail trade and by dint of hard work and economy have risen from the position of clerk to that of proprietor will smile at such a bit of trades union tyranny as the above! The clerk who wants to win, to make his mark in the world, puts no limit on his time, nor bonds upon his employer. His business is to use all of his talent and power to further the best interests of the business so long as he is part thereof.

A young fellow entered one of our city banks as a clerk in a subordinate position. Everyone knows that promotions in a bank are usually very slow and are governed by position and length of service. This young chap soon found that his fellow clerks were crowding part of their work on him. Instead of resenting this, he did whatever they asked, and the more he did the more they required. The result was that he not only acquired mastery of the details of his own position, but a knowledge of the work of those holding other and higher places. He forged ahead and to-day occupies a place far in advance of the clerks who thought to impose on his inexperience and good nature.

The successful clerk will never lag behind his employer. If the store is opened at 6 A. M., the clerk who wants to get to the top will not put in an appearance at 7 A. M. and tie his employer to a signed agreement. It may be that the Utica grocers are willing to let the clerks run their business. If so, they lack the elements of leadership and never will rise to prominence in their calling. As a rule the successful grocer is the one who regulates the clerks.—*American Grocer.*

The excellent points made above, may find application in the Hardware store, as well as the grocery.

C. S. Wells, of the Syracuse racing team, wins time prize, smashing Pacific Coast record of the Associated Cycling Club's annual 25-mile road race, time 1:10 3-5. This race was run at San Leandro, Cal., on February 22d.

A bicycle tire of hollow rubber balls held in place by a channeled aluminum rim has made its appearance.

BICYCLE ANNOUNCEMENTS FOR 1896.

We have received from the John P. Lovell Arms Co., Boston, Mass., their handsome cycle catalogue for 1896. On the cover is represented a large sparkling diamond, the rays being represented by silvery lines. On the first page is an engraving of John P. Lovell, the president of the company. The centres of the pages are designed to form diamonds and hearts, the trade marks of the Lovell Diamond and Lovell Special wheels. The company will offer fourteen models during the season of 1896. The company say: "But a very few years ago the possession of a bicycle and the pleasures of wheeling were possible only to the favored few, the price of wheels placing them beyond the reach of the masses. To-day all this is changed and a good mount is within the reach of everyone. But a comparatively short time ago the bicycle and bicycling was regarded by many as simply a fad, a craze, that would soon run its course, and the wheel become a thing of the past. 'The bicycle has come to stay,' is now heard on every side. It has demonstrated its practical utility, both as a means of healthful exercise and from a business standpoint. What has brought about this result? The reduction in price and the development of the wheel. It is with pardonable pride that we take to ourselves some considerable credit for the widespread use and recognized usefulness of the wheel. Our motto has always been, 'To lead and not to follow.' We took the initiative and were the first to offer to the public a really first-class wheel at a moderate figure. We divided our profit with those who wished to ride, and demonstrated that a good wheel could be sold for a reasonable price, and at a profit. We have spared neither time nor expense in studying the wants of the riding public, and to increase our facilities for manufacturing. That our efforts have been successful in this direction we think is amply attested to by the widespread and far-reaching fame of the Lovell Diamond. This year we offer to the public a larger and more complete line of wheels than ever before, all made in our own factories. Our line will comprise the Excel at $45, $55 and $75; the Lovell Special at $85, and the Lovell Diamond at $100, besides a combination and regular tandem at $140."

We have at hand the 1896 catalogue of the Iver Johnson's Arms & Cycle Works, Fitchburg, Mass. The company have departed from the usual methods of catalogue construction. The border of the front cover is in red covered with a leafy design. In the center is a herald mounted on one of the company's wheels, blowing his horn, to which is attached a red banner, bearing the following inscription: "A Long Established Cycle With a New Name." On page two is a handsome engraving of the factory at Fitchburg. The following appears on the succeeding page: "Ye Entertayning Historie of ye Iver Johnson Arms & Cycle Workes. Beying a conscise and true exposition of ye manifest excellence of such goods as they doe make for ye better comforte of the ryders of ye Hobby horse, together with a treatise upon ye durabilitie and ye economie of Iver Johnson Cycles, and manie Reasons why ye product of ye saide house is greatlie to be preferred to all others, and that these thinges may be ye better understood ye historie hath been moste plentifullie bedeckt with manie pictures at greate coste. Printyed at ye Towne of Fitchburgh in ye Yeare Ann. Dom. MDCCCXCVI." The company will offer nine models during the season of 1896.

The Bellis Cycle Co., Indianapolis, Ind., will carry four models during 1896. The company make a few remarks about wheels, as follows: "Did it ever strike you that there is no article in common use so delicate in its mechanism, which, considering present light weights, is called upon to perform so much service as the bicycle? It must, therefore, be evident that to do its work well, and all the time, the machine requires to possess the highest grade of materials and metals suitable to its various parts, and that each part, however small, must be reduced to mechanical accuracy by workmen skilled in their respective lines, and by the use of modern and expensive machinery. We have spared neither time nor expense to obtain the very best materials for Bellis wheels. We have all that is new in machinery and experienced mechanics who are old in the art of cycle building, in our factory. We are fully equipped in both material and facilities to supply our 1896 trade with high grade work only."

The line offered by Singer & Co., Ltd., Nos. 6 and 8 Berkeley Street, and No. 2 Warren avenue, Boston, Mass., offers a large range for choice, including, as it does, nine wheels, three tricycles, and one tricycle carrier. The company say: "The philosophy of trade forces prices to correspond with quality. No man can buy for a dollar that which is worth two dollars, nor can one man make for a dollar what another and older man cannot produce for twice as much money. There are prices and prices, and qualities and qualities, and every time they correspond. Our advice to buyers, whether they buy wash tubs or steamships, is to purchase of long-established houses with pronounced reputation. The manufacturer who has one price and maintains it gives positive evidence of the standard value of his goods. It is worth something to know what you are going to get."

The McElwaine-Richards Co., Indianapolis, Ind., manufacturers of the J. & R. changeable bicycle gear, say: "We are pleased to present our second annual catalogue of the 'J. & R.' changeable gear to all bicycle riders on the globe, with the regret that those who have left it will not have an opportunity to further enjoy the delight of a perfect two-speed gear. The great demand for our gears has encouraged us to keep apace with the improvements in common with all bicycle work, and we are now enabled to offer to our friends and patrons an improved 'J. & R." which is much lighter, neater, and even stronger and more durable than the old style."

We have received the following announcement from Farwell, Ozmun, Kirk & Co., St. Paul, Minn., in which the company say: "It is a pleasant task, indeed, to present to you this, our 1896 catalogue of bicycles and sundries. It is specially so from the fact that our experience in 1895 has confirmed, in a remarkable degree, our original choice and our purpose to make no changes in our line of wheels for the future. We will continue to be, during 1896, Northwestern distributers of the Syracuse and Crawford bicycles.' The company carry a full line of sundries.

The National Cycle Mfg. Co., Bay City, Mich., will offer four models for the coming season, including a tandem and a ladies' wheel. The company remark that "the proof of the pudding is in the eating of it. Our every effort has been to produce the best. We have no reason to change our policy. Success has been won easily and honestly. Riders who know what a bicycle is will always buy the best. Riders who have bought the National in past years will buy no other make. Our best pleasure is in their praise. They wanted the best."

The Slaymaker-Barry Co., Lancaster, Pa., for whom John H. Graham & Co., No. 113 Chambers Street, New York, are sole sales agents, are sending out their 1896 catalogue and price list of bicycle locks. The company manufacture sprocket locks, chain locks, bag locks, shackleless locks, wheel locks and chains. These articles are made of

Digitized by Google

a variety of metals, including aluminum, brass, bronze, gun metal, steel and iron.

The Simmons Hardware Co., St. Louis, Mo., have issued their bicycle catalogue for 1896. The company handle the Eagle, Iver Johnson, Road King, Road Queen, Essex, Westminster, Delmar and Favorite wheels and carry a full line of accessories.

The National Cycle Mfg. Co., Bay City, Mich., are offering for 1896 four models: Model F, road wheel; model G, ladies' wheel, racer and tandem. The company say that "a fixture in our business policy since we began the manufacture of bicycles has been the purpose of building only the best and best improved bicycle that could be produced. Methods and demands have both changed, but the National is still made with that one purpose the first consideration of its production. It has won its way on that line. Much is expected, yes, demanded in a bicycle claimed to be pre-eminent. Materials, workmanship and finish must be of the finest for a bicycle to be considered even 'good.' Improvements, to be of value, must be simple in construction, practical in use. The intelligent rider is no longer influenced by the display of individuality unless it carries with it assurance of successful application. National improvements compel conviction of their value."

American Screw Co. List.

Under date of February 26, 1896, the American Screw Co., Providence, R. I., announce the following discount sheet, and call attention to the changes in discounts on Wood Screws, Drive Screws, Rivets, Hand Rail Screws and Pointed Wires. They also confirm the discount on Bay State Tire Bolts, adopted on the 30th ult.:

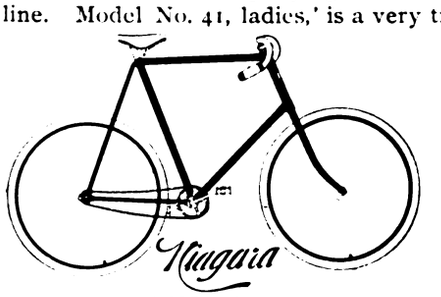
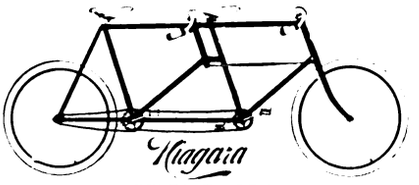
Buffalo Wheel Co.'s 1896 Line.

The Buffalo Wheel Co., makers of Niagara bicycles, are placing a fine line of wheels upon the market this season. The makers state that the characteristics of the Niagara,



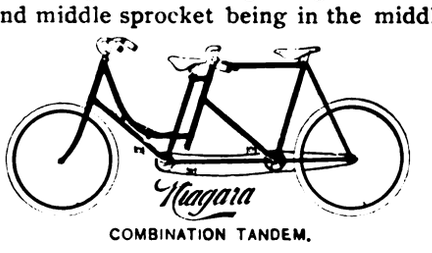
MODEL NO. 40.

"light, strong and speedy," will be as prominent as ever. All the latest ideas of any merit are embodied in the construction of these wheels, such as large tubing, tubular



MODEL NO. 41.

hubs, right crank and shaft one piece, detachable front and rear sprockets, etc. The accompanying illustrations show the entire line. Model No. 41, ladies,' is a very trim look-



MODEL NO. 42.

ing wheel and has thorough dress protection. The company state that since they brought out the "Maid of the Mist" in 1892, they have had a large and growing trade in ladies'

GENTS' TANDEM.

wheels. Niagara tandems are first class in every respect. A new idea is brought out in the gearing of these machines, the front and middle sprocket being in the middle of the

COMBINATION TANDEM.

bracket and the tread is only 4½ inches. The entire line is finely finished and presents a most creditable appearance. Tandems list at $150, racer and special at $110 and roadster and ladies' at $100.

ADVERTISING A RETAIL STOCK.---IV.

This department is conducted by an experienced advertising man. It will be devoted to questions of profitable publicity as especially related to the retail Hardwareman.

We desire to make it of practical benefit to the readers of "HARDWARE," and to that end invite you to ask any questions on advertising, make any suggestions, or send in your ads. for criticism. We will do our best to make the path of advertising easy for you.

There is one thing that every Hardwareman needs in the preparation of his advertising, and that is brains. He can use brains and lots of them in the way he gets his ads. together for the daily papers, and he can use brains and lots of them in inventing new and attractive ways in which to arrest the attention of the public, and get himself and his store talked about—for that, after all, is the first step towards an advertising success. Every man has in his make-up more or less originality, and this can be increased by exercise, for one idea breeds several.

There are many men who have used their inventive genius to good effect in the advertising of almost every conceivable object, but I know of no one in the Hardware field, or in any field akin to it, who has so clearly demonstrated the value of well conceived and well carried out ideas as H. C. Gara, of Gara, McGinley & Co., the Philadelphia roofers. His firm has become known all over the Quaker City, not only because of the fact that it is the only firm of roofers that advertise in the daily papers, but also because they are all the time doing some bright thing to attract attention.

Knowing this, and realizing that nothing has so much weight as a success already attained, I called on Mr. Gara the other day and got from him many ideas that he has used to good effect in times past, and which are applicable to any retail Hardware stock.

In the first place, Mr. Gara says things differently from the other people when he advertises. His style is crisp and unusual. He takes for his motto: "Say little but say it strong," and then does it. He takes advantage of the changes in the weather, and never fails to remind the public that his business is to "mend roofs." There is a point in that for the Hardware dealer. It will soon be house-cleaning time. Don't fail to let the housewives know that you have a good supply of tack hammers, screw drivers, tacks, window locks, bolts, etc., and if you can sell them at a price a little below the usual, so much the better, for it will attract attention and bring you trade in other lines. Try it.

But I started out to tell of the bright things Mr. Gara has done outside of the newspapers. He uses street cars and his ads. there are marvels of attractiveness. In the first place they are well printed. Then they are characteristically bright in their wording. Take these for example:

"Say a little, but say it strong."

WE DO ONE THING WELL
WE MEND ROOFS

Everywhere is Convenient to us.
Telephone Street Cars Walking
Roofers in Tin, Copper, Slate and Tile
Gara, McGinley & Co.
23 So. 17th St.

"Say a little, but say it strong"

WHEN YOU WANT US
YOU WANT US QUICK

Everywhere is Convenient to us.
Telephone Street Cars Walking
Roofers in Tin, Copper, Slate and Tile
Gara, McGinley & Co.
23 South 17th St.

"Say a little, but say it strong"

Hire a doctor for the body
Hire a roofer for the roof
We are roofers

Everywhere is Convenient to us.
Telephone Street Cars Walking,
Roofers in Tin, Copper, Slate and Tile
Gara, McGinley & Co.
23 South 17th St.

"Say a little, but say it strong"

We and the City Hall are in the centre of the TOWN

Everywhere is Convenient to us.
Telephone Street Cars Walking
Roofers in Tin, Copper, Slate and Tile
Gara, McGinley & Co.
23 South 17th St.

But for plans and ideas. Mr. Gara is full of these. He noticed one day that it would be a convenience if there were a memorandum pad on each telephone. So he prepared one and sent it, all ready to be stuck on the instrument, to every telephone user in Philadelphia. It is a little pad about two inches wide and four inches long, and on the top of each page where it is bound to be seen, but leaving enough room for memoranda below it, is one of these little unforgetable ads. of his; a different ad. on each page, running in series of twelve, starting out with this big, bold one, stating:

"Say a little, but say it strong"

We Mend Roofs

Everywhere is Convenient to us.
Telephone Street Cars....Walking
Roofers in Tin, Copper, Slate and Tile
Gara, McGinley & Co.
23 South 17th St.

There is no getting around that statement. It would be just as effective for the Hardwareman if it said "We sell Hardware," or the idea could be followed out thus:

We sell Hardware—
All kinds—every kind.
One price—the lowest.
Proof—tack hammers, 8c.

Another thing that Mr. Gara did at one time was to send out a lot of thermometers—about five thousand of them—with just a line or two at the bottom, giving the firm's name, their place of business, and the work they were prepared to do—"Mend roofs." "That," said Mr. Gara, "was done quite a while ago, but it is still a paying ad. People are always wanting to know how hot or how cold it is, and they cannot possibly look at our thermometers without seeing our name and business." That is an idea that any Hardwareman could adopt for himself with very little expense, and have a constant reminder of his store at the door-post of every home.

Last year Mr. Gara was looking about for something new and he got out a regularly drawn up subpœna, commanding the recipient to appear at their office and "testify to the truth of, under pain and penalty of suffering damage from Fall and Winter storms." That is an idea so possible of general application to almost any line of trade that it is unnecessary to show the readers of this journal how

Digitized by Google

they could make use of it at very small expense to themselves.

Supreme Court

OF

Roofing.

GARA, McGINLEY & CO.

VS.

SUBPŒNA.

Filed October 1st, 1894.

AT

23 South Seventeenth Street,
Philadelphia, Pa.

City and County
of Philadelphia, ss:

Commonwealth of Penna.

You are hereby commanded (by all the power of this SUBPŒNA), That, laying aside all business and excuses whatsoever, you, and each of you, be and appear in your proper person before

GARA, McGINLEY & CO.

the Reliable Roof Repairers, at their place of business

23 South 17th Street

in the aforesaid City and County of Philadelphia, on and after the First day of October, A.D. 1894, from eight o'clock A. M. to five o'clock P. M., to testify to the truth of, and give evidence on behalf of said firm, charged with having stated that their claim of pre-eminence in their line, IS THE TRUTH, THE WHOLE TRUTH AND NOTHING BUT THE TRUTH, and you are then and there to leave your order to thoroughly overhaul the roofs, gutters, spouts, &c., on your property, and to put same in proper condition, and this you are in no wise to omit, under pain and penalty of suffering damage from Fall and Winter storms.

Given under our hand and seal this First day of October, A. D. 1894.

GARA, McGINLEY & CO.
23 South 17th St.

Witness.
E. X. PERIENCE.

The Gara, McGinley circulars are possibly not so applicable to Hardware, but as showing an irresistable style they are hard to be excelled. Take the last one they sent out. It lacks all the dry, prosy usualness of the ordinary circular, and starts out with the crisp statement, "We haven't a long story to tell. We have something we think you want," and ends with "We know what we have, and want you to know about it." It attracts by its very difference from the ordinary, and in that respect is to be considered by any one who thinks of circularizing his business home. "The circular," said Mr. Gara, "is only a good advertisement when you can send it by mail or in some other way so as to get it into the hands of the people you are trying to reach at a time when they will read it."

But I must not forget to mention Mr. Gara's last booklet. He calls it "Pointed Suggestions," and he has already distributed several thousands of them. It is attractively and daintily gotten up, and is full of pictures illustrative of the comfort of a mended roof in comparison to the unmended one, and the several phases of roof mending. It has, besides, several illustrations of the beauty of the metal work done by them, which is another branch of the firm's business, and a very prosperous one, too, I should judge from the looks of the mail Mr. Gara receives every morning about it.

Mr. Gara showed me many other ideas of his, which, as they are not so directly concerned with the purpose of this article, I am forced to omit, as well as a unique system of book-keeping, but that is outside my province as well.

I asked him as I was leaving if he thought there was any business that could not be advertised?

"I don't know of any."

"How about Hardware?"

"Well," said Mr. Gara, "Hardware is pretty near me, as there is a tinker's shop in nearly every Hardware store. I believe Hardware can be advertised as well as anything else. The Hardwareman who begins to advertise now would have the same advantage in most places that I have here—that of being the only man in his line in the place who did advertise—and there can be no doubt that he would reap greater results from the expenditure of his money than would otherwise be the case. I know that if I had a Hardware store I should advertise it."

Such words coming from so successful an experimenter in an hitherto untried field, are an added confirmation of all that I have said in these columns.

ARTHUR B. CHIVERS.

The Zenith Cycle Saddle Co., Disston Building, Philadelphia, show upon page 56 of this issue, their well-known and successful Zenith Cycle Saddle, of the 1896 model. They explain that it is built upon a new principle, will not sag, can be made hard or soft in one minute without removing it from the wheel, and light, strong and comfortable. They also make a special steel racing saddle. Full information in regard to their line will be sent upon application.

The New York Exhaust & Blow Pipe Co., Hartford, Conn., have furnished and erected for the Premier Cycle Mfg. Co., Bridgeport, Conn., an exhaust system, for removing the grit, rouge and lint from their polishing and buffing rooms. They also installed a system for removing the smoke and flumes from the forges and brazing fires. They do an extensive business in this line. The New York office is at No. 136 Liberty Street.

In response to our inquiry as to the manufacturer of a sweet potato hoe, a correspondent sends the address of E. S. & F. Bateman, Grenlock, N. J., who sell to the Eastern trade. In answer to another question, as to some firm that make a specialty of fitting up woodwork for Hardware stores, he sends us the name of the J. D. Warren Mfg. Co., Nos. 152-158 Marine Building, Chicago, and No. 271 Broadway, New York.

On page 2 of this issue the Akron Spirit Level Works, Akron, Ohio, show an illustration of their Akron Spirit Level, which, they state, is "winning favor every day." It certainly has made its way upon the market with no small degree of success. They speak in the most positive terms concerning its price, quality, trimmings, etc. The makers will be pleased to send catalogue and prices upon application.

The Smith & Egge Mfg. Co., Bridgeport, Conn., feel that they have a good thing in their new "Yankee" rat and mouse trap and are accordingly booming it to a great extent. They report considerably more rush in their factory than this time last year.

Digitized by Google

RECENT TRADE PUBLICATIONS.

Sickels, Sweet & Lyon, No. 35 Barclay Street and No. 40 Park Place, New York, have issued the 1896 spring edition No. 11 of their catalogue. The firm are the New York agents for Withington & Cooley Mfg. Co.'s garden tools, Union Steel Co.'s screws, American Shear Co.'s pocket knives; Popular, Perfection, Hercules and New Easy lawn mowers; adjustable bolt shears and scissors, Eagle File Co.'s files and horse rasps, the Samuel Winslow Skate Mfg. Co.'s ice skates, Stearns' scythe snaths, Simond's Crescent Ground cross-cut saws, Cortland Door & Window Screen Co., and Relay bicycles. The firm say: "This catalogue is not intended to represent our full line, but is issued every spring, with a supplement in the fall, more especially to call attention to seasonable goods, our specialties, and lines for which we are New York agents. We solicit, as heretofore, your correspondence for general Hardware, etc. We are also pleased to buy for our customers any goods that can be purchased in this, the greatest market of the country—in order that their purchases may be condensed and shipment of various items made together, thus saving expense and trouble. In addition to the large line of goods made especially for us, or for which we are New York agents, we sell, at manufacturers' prices, the various productions of Sargent & Co., Russell & Erwin Mfg. Co., E. C. Stearns & Co., Stuart's Window & Door Screen Frames, Stanley Works, Stanley Rule & Level Co., White Mountain Ice Cream Freezer Co., Bradley & Smith Brushes, the Illinois Pure Aluminum Co., Pure Aluminum Cooking Utensils; North Bros. Mfg. Co., Lightning and Gem Freezers; Peck, Stow & Wilcox Co., Atha Tool Co., American Axe & Tool Co., Hartman Mfg. Co., Hartman Wire Fence; Plumb, Burdict & Barnard; Winsted Edge Tool Co., Witherby Chisels; Oliver Ames & Sons Corporations, Lalance & Grosjean Mfg. Co., St. Louis Stamping Co., Shelton Co.; R. E. Dietz Co., Tubular Lanterns; Van Wagoner & Williams Hardware Co., Central Stamping Co., Iron Clad Mfg. Co., Nicholson File Co.; Landers, Frary & Clark; Henry Disston & Sons, National Saw Co., Enterprise Mfg. Co., the importations of Hermann Boker & Co. and Wiebusch & Hilger."

The Smith & Egge Mfg. Co., Bridgeport, Conn., have gotten out their 1896 catalogue of plumbers' specialties. The following articles are illustrated: Sanitary and plumbers' chains; basin, bath and tray chains; closet pulls, pipe straps, eight hooks and split links. The company also manufacture the following patented specialties: "Giant" metal sash chains, "Red Metal" and steel sash chains, sash pulleys and fixtures, padlocks, bicycle sundries, cable chains, Eureka shears, drill chucks, buttonhole attachments and rat and mouse traps. The company say: "In offering the plumbing trade our 1896 catalogue, we wish especially to direct attention to our line of closet pulls in enameled, stained and natural woods. These pulls are of all grades, the price depending on the finish, but the quality of the goods will be found first-class in all respects. We make a specialty of fitting up the pulls with chains and necessary eight hooks so that they are ready for use. The uniform quality of our chains is so well known to the trade that comment is unnecessary and every endeavor will be made to keep up to our present standard. Our line of single and double pipe straps fit all the sizes of pipe in ordinary use among the trade and the workmanship and finish on all is unexcelled."

Under the caption of "Two Treasures," represented by a little baby girl and a No. 1 burner, the Clayton & Lambert Mfg. Co., Ypsilanti, Mich., issue a catalogue and price list of their fire pots and torches for plumbers, tinners, galvanized iron workers and painters. The company say with reference to their tailors' or laundry fires: "It is hardly necessary to say that the fires made for the above trades have proven a success. It is one of our maxims, 'Be sure you are right then go ahead.' We never experiment at our customers' expense. The No. 2 tailors' or laundry fire will heat eight 24-pound irons as fast as eight men can use them. The No. 1 is half the size of No. 2 and is large enough for a shop employing six men. We fit the two sizes with extra strong tanks and with a brass air pump and pressure gauge and it is intended that 25 to 35 pounds air pressure be used. When fitted as described very little attention is needed and we warrant them to please." The catalogue also shows the double cinch hose band and mender.

Alfred Field & Co., No. 93 Chambers Street, New York, have gotten out a Cutlery price list of Joseph Rodgers & Sons. The articles listed include erasers, tweezers, button hooks, nail files and cleaners, pen and pocket knives, razors, scissors, knives and forks, knives only, forks only, ivory table knives, pearl table knives, fruit knives, fish eating knives, orange and lemon knives, cheese scoops, carvers, ivory carvers, pearl carvers, table steels, ivory steels, pearl steels, cooks' knives, cook's forks, slicers, bread knives, butcher knives, potato knives, cotton knives, shoe knives, farriers' knives, daggers, bowie knives, oyster knives, can openers, knife sharpeners, corkscrews, nail nippers, razor strops, razors in cases, razor cases, cutlery cases, scissors in cases, carvers in cases, razor paste, fixed handle corn knives, guards for forks, etc.

Merchant & Co., Philadelphia, New York and Chicago, manufacturers of high grade roofing materials, have gotten up a most artistic and attractive catalogue. The paper is of a special quality and its leaves are enriched with a number of views in imitation of water colors, some of them worthy of a frame. The views include "Castles in Spain," Five Santa Barbara (Cal.) Cottages, Colorado Building World's Fair, Hollenback Home, Los Angeles, Cal., Princeton Inn, Haddon Hall, Atlantic City, First Baptist Church, Gouverneur, N.Y.; New York Harbor, J. E. Pepper's Residence, and the company's factory. The view of New York Harbor is especially worthy of mention.

The Standard Horse Shoe Co., Boston, Mass., have issued their 1896 catalogue. The company make the following announcement: "In the past six months we have torn out all the old machines and furnaces in our factory, and have replaced them with the most modern machinery and furnaces, all of which are operated by the most skillful workmen in the country." The catalogue contains pictures of the famous pacers and trotters, including John R. Gentry, Robert J., Mascot, Joe Patchen, Alix, Nancy Hanks, Directum and others. It also contains tables showing the weight of the different styles of shoes.

The Howard Iron Works, Buffalo, N. Y., have issued a neat little illustrated price list of their Bench Vises. In a note of introduction they say: "The vises manufactured by the Howard Iron Works are noted for their great strength, durability, and their excellent construction. The malleable cast iron nut of the vise is rendered immovable by being set in molten iron, thereby doubling the durability of both nut and screw, for they are saved from the destructive grinding, cutting and binding action of the cross-strain, which has always been a great evil heretofore. Another improvement is the chilling of those parts of the

Digitized by Google

slide sheath, that come in contact with the slide, thereby avoiding much friction in its movement. Many additional and important improvements have also been made in our Swivel Vise. There is great strength in its circular base, so that its side parts may be employed for light anvil uses. The vise is held fast to bench by a very simple cam arrangement, holding it so firmly that the combined force of several men exerted upon the vise cannot move it from position; and yet so convenient is the arrangement that this great power is instantly removed and applied. The seat of the swivel is slightly concave, so that it shall rest upon the circumference of its base."

Graef & Hess, No. 82 Lake Street, Chicago, are distributing a unique catalogue. The cover is designed to represent California red wood, and is finished in the rough. The company are direct representatives of Hardware manufacturers. They say: "In issuing this book we intend it only as an introduction to the several lines we represent, calling attention only to the leading goods."

We have received from the Wilcox Mfg. Co., Aurora, Ill., a neat catalogue of their door hangers and Hardware specialties. Their line is fully illustrated.

Snow Shoe Irons.

The illustrations here shown are of the Snow Shoe Irons, manufactured by Berger Bros., Philadelphia. They were designed to be used without a snow rail, if spaced reasonably close together. However, when a rail is preferred it can be bolted to these irons, which make very neat fasten-

FIG. 1.

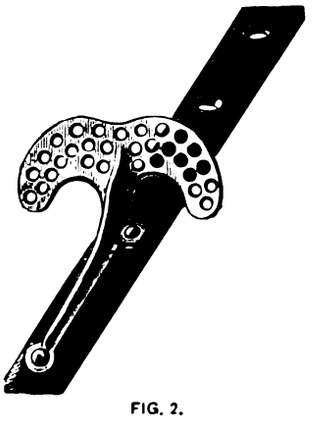

FIG. 2.

ers for it. The one shown in Fig. 1 is made to be clamped to the standing seams of metal roof, the lugs clinching through the seams. That shown in Fig. 2 is intended for slate roofs, and is made to be riveted to wrought iron plates, which extend up under the slate. They are made of the best malleable iron, are well tinned to prevent corrosion, and are very easily put in place. They are also patented. The manufacturers, Berger Bros., Philadelphia, will send a valuable and well illustrated catalogue to all who apply for it.

Worcester Made Tools.

Worcester made machine tools have a world-wide fame for variety and excellence, and the city's production of these is so entensive that it has become one of the greatest, if not the greatest, centre for their manufacture in the country. A gentleman from Paris, visiting in Worcester this week, made the statement that the French artisan much prefers the American made lathe and drill to any made elsewhere.

The local machine tool business is at present, and in the main, prosperous, and much of this prosperity is the result of the foreign demand. Worcester made lathes, engine lathes, drills and milling machines are sent direct to almost every country in Europe, Mexico and South America. The machines for export have to be carefully boxed and packed, and those sent to South America have to be put in cases or packages that must not exceed 300 pounds in weight, for the reason that most of the packages have to be transported on pack mules into the interior of the different countries.

Worcester made machine tools, to a large extent, find their way into the mines of the country, no matter how remote they may be. The export trade is continuous and promises to be of great importance in the not distant future.—*Worcester* (Mass.) *Gazette*.

A Range Reunion.

The annual reunion of the general and division superintendents of the Wrought Iron Range Co. took place some evenings since at the Planter's Hotel, St. Louis. Representatives of the concern from all parts of the United States and Canada went to St. Louis to greet their employers and brother workers. All of the reports received were favorable. W. W. Culver, Sr., acted as toastmaster, assisted by H. H. Culver, Jr. By special invitation Mayor Cyrus P. Walbridge attended. He was the first speaker. He gave the visitors a hearty welcome, and one of them in responding assured him of the support of their brother workers if he he were nominated for Governor. He smiled, but made no response. Nearly every one of the forty gentlemen present had something to say. They were a fine looking body of men, and as some one put it, were "polished orators." Some time in the future there will be a reunion of all of the salesmen of the concern, numbering six hundred.

A Sycamore Legend.

Listen, pale-face, to this legend,
How it was the Crimson button,
Came to be the ruling fashion,
On the earth where pants are worn,
When the Injun was a savage,
Showed his bare legs like a Scotchman
Posing in the "altogether"
On his tawny underpinning,
Buttons were to him unknown;
Never put on a suspender.
So it was until the cycle
Came to charm him from his customs,
Customs older than tradition;
Then he had to don the trousers,
Had to sew upon them buttons,
Buttons strong as iron rivets,
Buttons to resist the straining.
Buttons crimson in their color,
Symbols of a mighty power,
Everyone it marked a blood spot,
Symbol of the Injun's prowess.
"Button, button, Crimson button,
Who has got it, who has got it?"
Is the game the world is playing;
Old and young have caught the fever,
Buttons going by the million,
Injun on the edge that's ragged,
Thinks that he may lose his trousers,
May be forced to go in bare legs,
As he did when he was a savage,
What a pity to disgrace him.
Spare him, spare him, Honest Injun!

SYCAMORE.

The Western Electric Co. of Chicago have just perfected a fire protection device which is attracting much attention among property owners and underwriters. The device is one for the automatic closing of iron doors in a building in case of fire. By this method the doors are held open by magnets, and in case of fire a button is pressed, the power of the magnets destroyed, and the door closed by counter weights. Experiments are being made by the company with an automatic adjustment which will release the doors from the magnets at a certain temperature, and greatly lessen the chances of fire spreading from room to room or even from one building to another.

Merrill Watson, the manager of the New York branch of the Central Expanded Metal Co., Pittsburg, Pa., has removed his office from No. 107 Chambers Street to No. 256 Broadway.

SECOND ANNUAL SPORTSMEN'S EXPOSITION.

The Sportsmen's Exposition which will open at the Madison Square Garden on March 16th and continue until March 21st, will be the second of its kind held in this city under the auspices of the Sportsmen's Association. Readers will readily recall the great success that attended the Exposition as a new undertaking last May, and with the prestige of this former triumph, the projectors of the enterprise expect to reap new laurels. Many manufacturers have already applied for and have been allotted exhibition spaces and are making more preparation for attractive displays than heretofore. Harry C. Palmer, the genial secretary, is doing all in his power to make the show an unqualified success. We give, as far as possible, a brief advance summary of the individual exhibits:

HERMANN BOKER & CO.

Hermann Boker & Co., Nos. 101 and 103 Duane Street, New York, will have two spaces at the show. In one space they will show the Spencer repeating shotgun in three styles, grade E, model 1896, fine twist barrels; grade C, model 1890, fine Damascus barrels and a special trap gun, one of the first turned out for this purpose in the repeating shotgun line. These are made with detachable barrels and flat rib on barrel. Furthermore, they will show the Hollenbeck hammerless gun manufactured by the Syracuse Arms Co., of Syracuse, N. Y. There will be several grades shown, the two main grades being O, plain frame, twist barrels; No. 2 with fine grade stock and fine Damascus barrels. The company also intend showing the Mannlicher repeating rifle, the high power sporting rifle of the period, 8 mm. or .315 cal. in three grades. The No. 1 with round barrel, flat matted rib; No. 2, octagon barrel; No. 3, carbine. These rifles are new, and have never before been shown. The range as per Government statistics is 3000 yards and penetration with full mantled bullet 50 inches of pine.

E. I. DU PONT DE NEMOURS & CO.

E. I. Du Pont de Nemours & Co., Wilmington, Del., will occupy the same space as last year, and the arrangements have been carried out with regard to making a tasteful display. The rear of the space will be filled by a cabinet lined with plate glass and embellished with gilt and scarlet. The color of the case is a rich cream, which will serve as an excellent ground for the coloring. In the upper part of the cabinet will be three openings, those on each side holding a beautiful group of empty packages, in the most varied styles. These will show very well the numerous kinds of powder manufactured by this old established house. The background of looking glass will add to the appearance of the bright painted kegs and canisters and show by reflection the rear of the packages. The centre of the niche of the cabinet is to be devoted to the magnificent trophy lately won, and still held by Fred Gilbert, of Spirit Lake, Iowa. This trophy was won by him at the World's Championship Du Pont Smokeless Powder Tournament, given in Baltimore, 1895. The background of this niche will extend to the floor, and the mirrors form a proper setting to this splendid work of the silversmith's art. On the left side of the space will be a hexagonal space containing three shelves. Upon the upper one of these will be a centre piece composed of alternate sticks of willow wood and the charcoal made therefrom. A glance at this will show the fine quality of the material used. Surrounding this in neat glasses will be arranged the various black sporting powders, O.T.P., Fg., FFg., FFFg., Eagle Ducking, all of which are too well-known to need description. V.G.P. is a clean moist strong shooting powder well suited to trap shooting. Choke Bore is a powder especially prepared with great care for choke bore guns. The middle shelf will contain gun cotton and the various smokeless powders. The gun cotton exhibited will comprise samples of the United States Service gun cotton, as well as that used for the manufacture of smokeless powder and for other explosives. Smokeless Powders: The samples of these that are to be shown are for shotguns, No. 1 rifle, well suited to the heavier sporting rifles which use a lead ball. No. 2 rifle is for the lighter rifles and for pistols and revolvers. No. 3 is for gallery rifles only. Powder for the new .30 cal. Army rifle, as well as for the Navy .236, will be shown, and of different kinds. Here also will be seen smokeless powders of various forms for the heavy guns; powder for the 5-inch, 6-inch and 8-inch B. L. rifles and also for the field guns. Upon the lower shelf will be shown brown prismatic powder for all the large calibre rifles, both Army and Navy; also hexagonal and sphero-hexagonal; also the celebrated blasting powders made by Messrs. Du Pont, A. blasting in the sizes C, F, FF. FFF and FFFF, and the B. blasting in the sizes CCC, CC, C, F, FF, FFF, FFFF.

CUSHMAN & DENISON.

Cushman & Denison, No. 172 Ninth Avenue, New York, will exhibit their well-known Perfect Pocket oilers, Star oilers and Perfect wrench. The company's goods have been adopted by many of the leading bicycle manufacturers, so need no lengthy description.

THE MARLIN FIRE ARMS CO.

The Marlin Fire Arms Co., New Haven, Conn., will show the various Marlin rifles from model 1891, including the model 1895, which is the last model, for the heavy calibres. Their revolvers will also be displayed. The company say that their exhibit will illustrate the possibilities of fine work in rifles. Sights, rust repeller and other sundries will be shown.

AMERICAN "E. C." POWDER CO., LTD.

The exhibit made by the American "E. C." Powder Co., Ltd., Oakland, N. J., will consist of a large pyramid composed of a number of sample bottles containing the different sorts of smokeless powder manufactured by the company. The shotgun, rifle and revolver powders being each of different colors, will make a very effective display. Dummy samples of gun cotton as made by the company will also be displayed.

THE HUNTER ARMS CO.

The Hunter Arms Co., Fulton, N. Y., will show in a magnificent oak case, made for the purpose of this exhibit, a number of strictly high grade guns in every particular, ranging in price all the way up to $500.00. The company remark that their "A-3 model, $500.00 grade Smith automatic ejector is pronounced by many of the sportsmen throughout the country to be the finest piece of gun making that has ever been seen."

There will be in attendance W. Fred Quimby, Harvey McMurchy, Thos. Hunter, the manager of the company, Wm. Hunter, and Robert Hunter.

VON LENGERKE & DETMOLD.

Von Lengerke & Detmold, No. 8 Murray Street, New York, will display Schultze smokeless shotgun powder in various stages of manufacture. This powder, the company state, "is the oldest and most widely used nitro compound sporting powder in the world." The exhibit will include samples of the wood from which the pulp is made, the pulp in a crude and a purified state, the nitrated cellulose, and the graining, hardening and waterproofing processes, and the finished powder. It also shows in what shape the powder is packed, together with other interest-

Digitized by Google

ing and educational points and features. Francotte guns from the highest grade to the lowest and lightest to regular heavy weights manufactured, as well as special guns of various kinds will be shown, together with a full line of fine hand-made fishing tackle, including rods, reels, lines, leaders, flies, artificial baits, etc.; ammunition, the loading and testing tools and instruments used by Von Lengerke & Detmold; the Lu-mi-num, an aluminum bicycle, and a motor bicycle in operation, "the only motor wheel which has so far proved a practical success in Europe and is to be introduced and manufactured here."

THE TIE CO.

The Tie Co., Unadilla, N. Y., will show adaptations of the "Holdfast" for sportsmen's tent and hammock combined, fish stringers, fish basket carriers, game hangers, luggage carriers and many other adaptations for various purposes.

THE UNION METALLIC CARTRIDGE CO.

The exhibit of the Union Metallic Cartridge Co. Bridgeport, Conn., will conform in its general features with the handsome display made at the last show. In the middle of the exhibit will stand an octagon-shaped base from which will arise four slender pillars, which in turn will support a crown-shaped top. The whole will be constructed of ebonized wood decorated in gold. Within the case thus formed will be an eight-sided column which gradually tapers toward the top. On the sides of this column will be arranged the products of the Bridgeport company, consisting of all the newest wads, primers, shells, cartridges, etc. At one end of the exhibit will be a three-pounder Hotchkiss gun with ammunition, and at the other end an ebonized table filled with samples of the arms used by different governments of the world.

IVER JOHNSON'S ARMS & CYCLE WORKS.

The Iver Johnson's Arms & Cycle Works, Fitchburg, Mass., will exhibit in spaces 85 and 86. Their stands will be fitted up with railings, carpets, electric signs, fancy show cases, etc. They will exhibit a full line of Iver Johnson automatic hammer and hammerless revolvers, Boston bulldog revolvers, American bulldog revolvers, Defender single action pistols, Champion shotguns, and Iver Johnson and Fitchburg cycles. Mr. Fred. I. Johnson will be in charge of the exhibit with able assistants. The Iver Johnson's Arms & Cycle Works have been established since 1871.

W. H. MULLINS.

W. H. Mullins, Salem, Ohio, will display his "Get There" ducking boat and double ender pleasure boat, and will show aluminum and manganese bronze boats of each.

THE LAFLIN & RAND POWDER CO.

The Laflin & Rand Powder Co., No. 99 Cedar Street, New York, will show a model of a powder mill in operation, which, from its novelty at least, will doubtless prove of much interest. A description of the operation of the mills will be distributed, enabling the observer to understand their working. There will also be shown samples of the various grades of gunpowder made by the company, comprising mining, blasting and sporting powder in the several sizes of grains, as well as the ingredients used in the manufacture. The familiar packages in which the product of the company is marketed, will also be exhibited and will be readily recognized.

THE CLEVELAND TARGET CO.

The Cleveland Target Co., Cleveland, Ohio, will have on exhibition a full line of traps, electric pulls and Blue Rock targets, and will also exhibit an entirely new and novel automatic magazine target trap. The company state that the new trap is a perfect working machine and will throw targets so rapidly that one trap and one trapper take the place of five ordinary traps and five trappers, under the system now in use. They explain that the trap is constructed on mechanical principles and in the best possible manner, and will stand a large amount of use and abuse. It is destined, in their opinion, to revolutionize the present method of target shooting.

PARKER BROS.

Parker Bros., Meriden, Conn., will exhibit in cases about one hundred and twenty-five of their well-known guns, including hammer and hammerless, in the different bores.

TATHAM & BROS.

Tatham & Bros., No. 82 Beekman Street, New York, manufacturers of shot and lead, will display a variety of samples. Their principal exhibit will consist of a glass and silver tower about eight feet high, containing samples of shot arranged to show the uniformity of the pellets in the various sizes, the largest being placed at the bottom. The tower will be octagon in shape and will show to advantage the beautiful polish and regularity of the shot.

SAVAGE REPEATING ARMS CO.

The Savage Repeating Arms Co., Utica, N. Y., will exhibit Savage smokeless powder and Savage smokeless powder rifles, sporting and military. The company say: "The many prominent advantages of smokeless powder are so obvious that it is unnecessary to urge its utility with sportsmen. The exhibit of a rifle with the absence of smoke with long range, flat trajectory, high velocity, great penetration, light weight, and less recoil than comes with the use of black powder rifles, we think the exhibit will prove of interest to the public." They further say that "the Savage rifle is the first hammerless magazine sporting rifle ever built to use smokeless powder, and the sportsmen are welcoming it as a rifle that meets a long felt want, for less weight and increased powder. The company will also exhibit cartridges, reloading tools and sundries and also a duplicate of the Savage Military rifle recently entered in the test before the Board of Examiners to select improved arms for the State of New York."

OVERMAN WHEEL CO.

The display of the Overman Wheel Co., Chicopee Falls, Mass., will consist of cycles, cycle sundries and athletic goods; the first and the last will occupy by far the larger space. Their exhibit of athletic goods will be pre-eminently a manufacturers' display. They will aim to show the material and workmanship of their goods as well as completed product, the purpose seeming to be to give a customer confidence in the honesty of the make-up of athletic goods bearing the Victor stamp. There will be an abundance of finished products also open to the closest inspection of the public. Visitors are invited to step up among the tables and cases containing goods and to examine the products displayed. A novel and pleasing feature of the athletic goods exhibit will be the actual manufacture of baseballs, tennis balls and tennis rackets by expert workers from the factory. Last year this exhibit attracted hundreds. This year it will have lost none of its freshness and interest for the public.

The stockholders of the Stanley Works, New Britain, Conn., recently held their annual meeting and elected the following directors: William H. Hart, Peter McCartee, of New York; A. Chamberlain, of Meriden; C. P. Gross, of Waterbury; L. H. Pease, Frederick N. Stanley, Geo. P. Hart, Edward N. Stanley. The directors elected the following officers: President and treasurer, W. H. Hart; vice-president, Peter McCartee; secretary, L. H. Pease; assistant manager, George P. Hart; auditor, H. D. Humphrey.

The Salem Wire Nail Co., Salem, Ohio, New York branch No. 277 Broadway, have gotten up a unique envelope opener. It is made from a sixty-penny wire nail, drawn out, forged and polished.

HARDWARE'S "Prices Current" are reliable.

Warren's New Screw Cases.

The accompanying illustrations represent Warren's New System Screw Cases and introduced by the Warren Mfg. Co , Nos. 152 to 158 Lake Street, Chicago, adapted for use

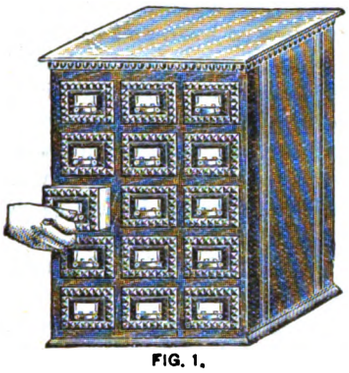

FIG. 1.

in Hardware stores. These cases are new, represent all the latest improvements which up to date goods command. The manufacturers state that they are strongly built, handsomely finished with antique oak ornamental drawers

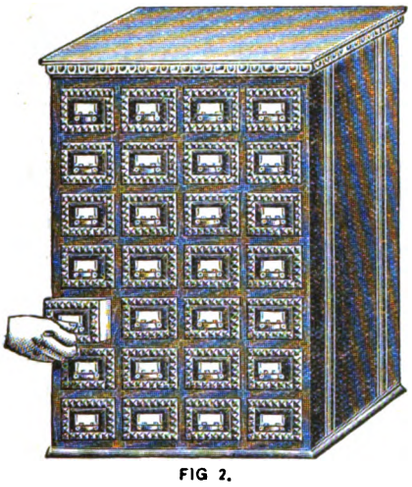

FIG 2.

with brass pull and brass card frame, each drawer containing two movable partitions and three spaces, and has a label holder in which the number and size of the contents can be printed. The drawers are made with a circular bottom so that the contents roll to the centre. The partitions in each

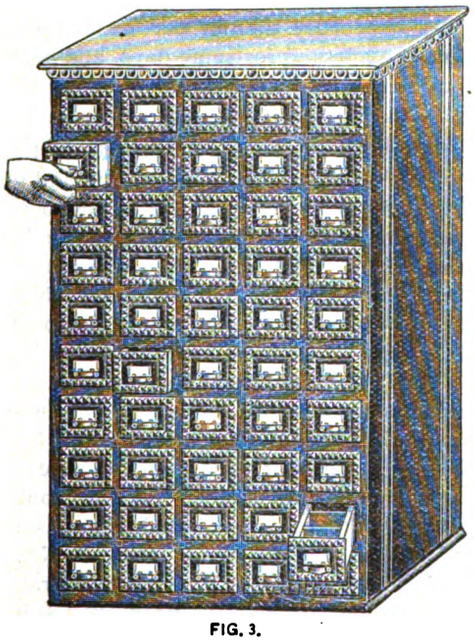

FIG. 3.

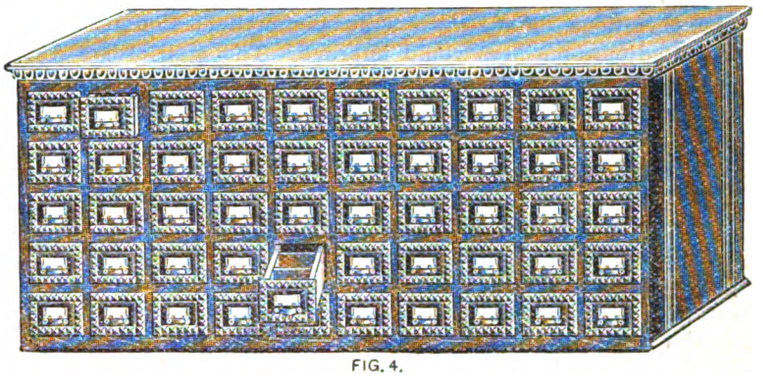
drawer are movable, thus permitting of the lengthening to any space desired. Any of these cases, it is explained, can also be used for all small articles such as rivets, stove bolts, bright wire goods, reamers, countersinks, bits, files, etc. The cases can be used for many kinds of goods; by removing the partitions a space over 13 inches long inside, by 2¾ inches wide and 2¼ inches deep, is made. Fig. 1 represents No. 1240, is 15 inches wide, 15 inches deep, 18 inches high; containing 15 drawers, with 45 spaces. Fig.



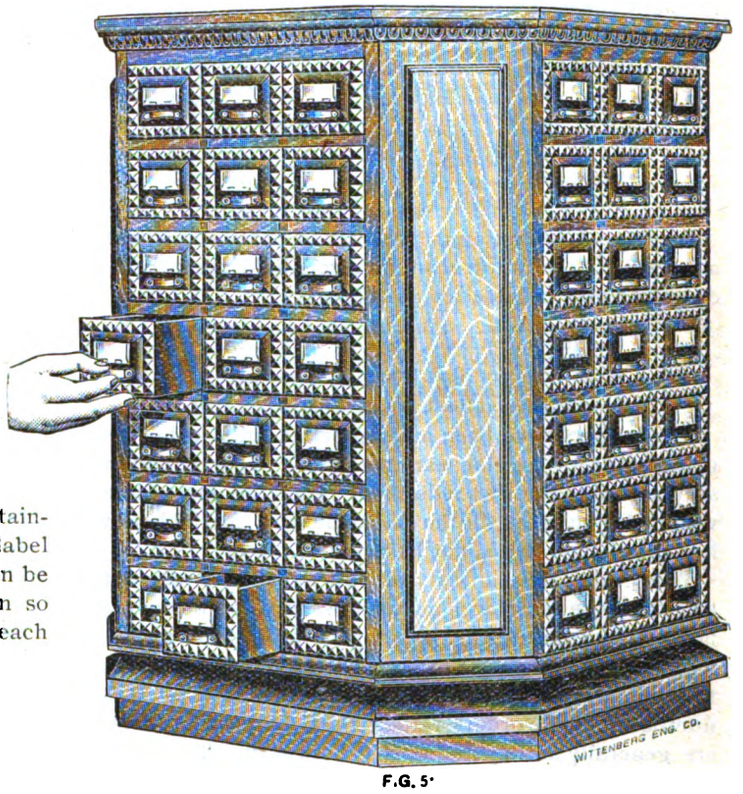


FIG. 4.

2 is No. 1242, which is 20 inches wide, 15 inches deep, 25 inches high; containing 28 drawers, with 84 spaces. Fig. 3 represents No. 1244, which is 24 inches wide, 15 inches deep, 35 inches high; containing 50 drawers, with 150

F.G. 5.

spaces. Fig. 4 is the No. 1246, and is 45 inches wide, 15 inches deep, 19 inches high; containing 50 drawers and 150 spaces. Fig. 5 is No. 1250 revolving octagon screw case and is 22 inches in diameter, 28 inches high and contains 84 drawers and 160 spaces. Other sizes are made to order, and can be shipped anywhere in the United States safely and at low rates. Fig. 6 shows a drawer in detail. The

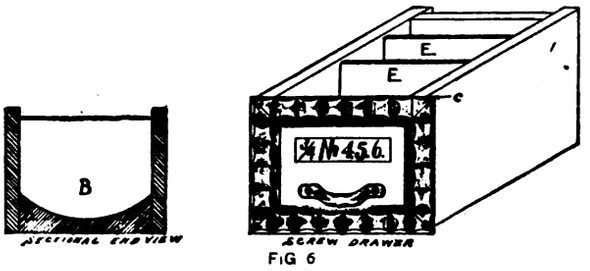

FIG 6

manufacturers state that they have been diligently at work for the last year experimenting and testing at their factory a new method and principle of providing Hardware store shelving, various devices and cabinets for a neat and convenient way of carrying stock as well as the auxiliaries that go with the tin shop and stove department.

Review of the Markets.

Hardware: There is a difference of opinion as to February business; some are willing to accept anything as an encouragement, while others say business did not come up to expectations. Some express the opinion that if Congress would adjourn business would improve. The mail orders are more numerous than those received from traveling men, and are of a well distributed character, indicating that the trade are buying to cover the requirements, and are not doing much in a stocking up way. Collections are only fair. The change in prices are mainly confined to the reductions in Screws and Rivets, and the advance in Nails.

Nuts and Bolts: It was expected that a change in the prices of Nuts and Bolts would be made by the manufacturers in February, but at the meeting held in Cleveland on the 20th, the manufacturers decided to sustain the present prices. If circumstances should arise making a change necessary, it will be left to the judgment of the individual manufacturers. The February demand for Nuts and Bolts has not reached expectations.

Rivets: The American Screw Co., Providence, R. I., in a discount sheet, under date of February 26, announce the revised discounts on Rivets as follows;

Norway, Ordinary, in Bulk	70 %
" Coopers, in Bulk	70 %
" Thousand, in Bulk	70 %
" Thousand, in Papers	70 %
" Block and Carriage, in Papers of 100	70 %
" Hame	70 %
" Belt, with Burrs	70 %
Bay State	72½%
Soft Steel Rivets, 3-16 and larger, 1 inch and longer	75%

Screws: A reduction in the price of Screws was made at a meeting of the Screw manufacturers held recently. The discounts now in force are as follows:

Flat Head, Iron	87½%
Round and Oval Head, Iron	80 %
Flat Head, Brass	87½%
Round and Oval Head, Brass	80 %
Flat Head, Bronze Metal	80 %
Round and Oval Head, Bronze Metal	75 %

The jobbers have been making prices fully as low as the manufacturers' regular extreme price. This action probably accounts for the reduction. Had the manufacturers waited for business till the stocks held by the jobbers were low the change would not have taken place.

Wire Nails: The anxiety of the jobbers to place their orders before the March advance, stimulated business to a large extent during the latter part of February, but the manufacturers say that trade is not as active as the time of the year warrants. The activity was caused by a large number of small orders rather than by large orders that are generally anticipated during February. The manufacturers have not accepted any orders for March delivery at February prices. The regulation of the output of the mills is the secret of their excellent control of the market, it being their practice to make just so many Nails as the market requires. March business has slackened somewhat. The prices advanced on March 1, as anticipated, to the following figures: Carload lots or mixed carloads, $2.40 per keg base, f. o. b., Pittsburg; less than carload lots, $2.50 per keg base, f. o. b. Pittsburg. On direct shipments on contracts in less than carload lots of 24,000 pounds of Nails an extra 5 cents per 100 pounds will be charged. To jobbers taking of one mill within one calendar month 500 kegs or more, 5 cents per keg rebate will be allowed. The New York quotation for carload lots on dock is $2.58, and small lots from store fetch $2.68.

Cut Nails: The Cut Nail market is in a similar condition to that of Wire Nails. Purchases made by the jobbers are supposed to cover their wants for March. The mills were very busy during the last week of February filling orders in anticipation of the advance that went into force on March 1. The manufacturers seem certain of maintaining the present high prices right through the Spring. With the 15 cents advance of March 1, prices are as follows: Carload lots, f. o. b. Pittsburg, $2.15; less than carload lots, f. o. b. Pittsburg, $2.25. Carload lots on dock, New York, are held at $2.33; small lots on dock, New York, $2.43, and small lots from store, New York, $2.45.

White Lead, Red Lead and Litharge: The quotations made by the National Lead Co., are as follows: White Lead, dry or in oil, Red Lead and Litharge in kegs, in lots of less than 500 pounds, 5¾c. net; in lots of 500 pounds and over, 5¼c.; Red Lead and Litharge in barrels and half barrels, ¼c. per pound less than price in kegs.

Linseed Oil: There is no change in the New York prices of Linseed Oil. Quotations are as follows: American raw, 41 cents per gallon; American boiled, 44 cents per gallon, and Calcutta raw, 52 cents per gallon.

Putty: The better grades range from $1.40@$2.25 as to package and quantity.

Window Glass: Quotations are 70@70&5% off on French and 75@70&10% discount on domestic.

Clapp & Co, bankers and brokers, New York, in their weekly letter say: "The United States imported from Cuba in 1895: Bananas, $582,986; oranges, $72,394; sugar, $36,544,252; tobacco, $9,222,977; mahogany, $987,307, total all, $51,652,125, against $76,413,131 the previous year. We exported to Cuba in 1895: Agricultural implements, $52,708; books, etc., $21,940; corn, $100,843; wheat flour, $962,944; carriages, etc., $88,338; coal, $891,208; cotton goods, $72,-060; fruits and nuts, $60,321; Hardware, $190,042; iron and steel, $505,638; sewing machines, $18,035; leather, $7,107; naval stores, $16,738; turpentine, $21,950; oils, $502,135; beef products, $35,205; hog products, $768,676; lard, $2,-036,337; lumber and manufactures of, $651,480; small items such as butter, cheese, seeds, cigarettes, etc. Total, all, $9,498,654, against $17,186,835 previous year. We imported from Spain $3,826,960, and exported to Spain $10,594,474. The effect of the fighting in Cuba can be plainly seen in reduced business with the island last year. Spain has three modern second class battle ships, and three other older ships of less pretensions. One small monitor, five unarmored vessels carrying guns, seven gunboats of good speed, 42 others of no significance, and 41 indifferent torpedo boats. United States has 4 battle ships, 6 monitors, 2 large war vessels, 1 ram, the ships Texas, Iowa and Brooklyn nearly ready for service, and 20 unarmored modern ships easily equipped. Patriotic men everywhere will not fail to remember the cost of war and however much they love the cause of liberty, they will also consider the cause of progress especially that of our own nation. Markets are liable to be affected for some days, and perhaps weeks, by various rumors of war nature."

THE BALTIMORE TRADE.

A careful review of business for the past fortnight reveals an amount of eccentricities as wavering and uncertain as the Spring zephyrs that now fan the leafless boughs. Good days alternating with bad days; now rush and bustle, then comes a delightful quiet, so evenly assorted that it seemed a kind Providence interspersed between each working day a Sunday, for those tired spirits who worship at the shrine of Rest. Altogether we have had little cause for complaint. The month of February closed very satisfactorily, showing a decided increase over the corresponding month of last year (comparisons usually are odious, and 1895 is a very poor criterion). The low price ruling on wire, and the assured certainty of an advance on Nails, no doubt had much to do with the increased sales; but shelf goods and seasonable Hardware moved in fair quantities. No! It was not all chaff that came to the mill; some few grains of wheat were intermingled, just to keep us in good spirits.

March, blusterer though he be, starts off very favorably. In a few weeks the real Spring trade in this section opens, and if appearances count for anything—judging from reports received—we can look forward to a fairly active season. Stocks in the hands of the country merchant are low, very low. His debts are less, owing to conservative buy-

Digitized by Google

ing, than at any time for the past two years. He comes to the market unhindered by obligations, conscious of a store at home that needs restocking. His trade journals have advised him of newer and lower prices—his visiting salesmen have promised him "a good time when he comes on." He comes, he buys, he goes; taking with him new ideas, leaving behind him a cordial feeling that lasts for a long time to come. Feelings of friendship thus generated are productive of good to all concerned. It is one of the amenities of trade, raising us out of the dull worship of dollars to the proper appreciation of the fellowship of man. This is not a bad world to live in when we learn to separate the bitter from the sweet. The bee and the wasp suck the same flowers, but both do not extract the same honey.

TABB & JENKINS HARDWARE CO.

THE BOSTON TRADE.

The weather during the past week has not been such as to write of any improvement in business, but, from general tendencies the outlook is encouraging, and our customers speak hopefully of spring trade. We learn from good authority that there is to be a fair amount of activity in building operations, and this fact has stimulated purchases in this line of goods.

The recent advance in Wire and Cut Nails, which was so thoroughly advertised, has stimulated the purchase of these goods, but the orders received were only such as to cover the demand for a short time.

The Screw market is decidedly weak, and the action of certain manufacturers, who have been offering these goods to the smallest trade at cut prices, is open to criticism.

A season of good bright weather will have a wonderful effect on the volume of business, as stocks are reported as light all through New England. FRYE, PHIPPS & CO.

THE PHILADELPHIA TRADE.

If any hopes existed of an early Spring, they have been entirely dispelled by the advent of March, which has come in the guise of the traditional lion, with blustering and continued cold winds. Of course, trade has felt the effects, and country dealers complain that spring trade has not begun to show itself. But, if the old proverb is at all true, March will distinguish itself by a lamb-like behavior at its close, and if so, it may reasonably be expected that the end of the month will witness a good degree of activity in all spring goods.

On the whole trade may be said, even now, to be fair, and especially as it has been greatly stimulated by the sample orders placed for Bicycles and Bicycle sundries. These help to keep bnsiness above the average, and it is gratifying to know that dealers are already sending in additional orders to refurnish their stock, showing that Bicycles have begun to move.

Collections are dragging, and the cold weather is probably largely to blame. Prices remain without important changes, and on the whole, the market may be said to be a waiting one. While the advance, although conceded to be artificial, in Nails has stimulated trade in that line greatly, and more Nails were probably sold in the last ten days of last month than in the whole of the preceding month.

The Nail combination appear to control the situation with a very strong hand, and there is even some talk of higher prices. What the trade generally would like to see, however, would be a new card—one which would actually give the price of a keg of Nails—for, as it is justly said, to-day the quoting price on Nails is for the empty keg only and $2.50 at mill sounds like a pretty high price for a wooden Wire Nail keg. Of course the trade understood the extras, but it is a constant annoyance to them to be obliged to explain this to consumers. BIDDLE HARDWARE CO.

THE COLUMBUS TRADE.

There is little to report this week in the way of changes. Trade is showing more life during the past week, and if collections would improve, there is no doubt about a good business. Merchants are needing goods, but conservative dealers are keeping close to shore, and it is no doubt the correct thing to do until things ease up a little. We find a good many retail dealers who bought nails outside of the Nail Association or their representatives are short, and no certainty when they will get any. Some have had to buy since March 1st, and pay the advance. When you come to think that 95 per cent. of the nails are made by the association, it is a sure thing that the other 5 per cent. does not cut much of a figure in the market. It is easy enough to quote prices and take orders, but not so easy to fill them.

Screws and Bolts are cheaper. Wire remains the same. We had a few pleasant days this week, and the Bicycle business was better than we wanted, as we could not get wheels fast enough. We are not selfish, but we would not cry if we had some mud again for a week or two until we get more wheels. We find others are in the same boat. There seems to be a certainty that there will not be enough medium priced wheels to supply the demand.

THE SMITH BROS. HDWE. CO.

THE PITTSBURG TRADE.

While there is still room for improvement, trade is "not half bad," as we find a substantial increase in sales over February, 1895. The demand for bicycles is much earlier than usual, and in quite large volume. Storekeepers in smaller towns are taking hold of these good and it looks as though the large output of all the makers will be absorbed. For the past two years conservative men thought the Bicycle business would be overdone, but they were wrong, and may be this year also.

Fence wire has receded in price with the decline in Steel Billets, and is now very low. The 15 cents advance in Nails has taken place and the Trust seems to be able to control the market. We expect a fairly good Spring trade and that it will open up early. Collections are a little slow just at present. LOGAN-GREGG HARDWARE CO.

THE DAVENPORT TRADE.

The ice in the Mississippi went out last Tuesday, taking with it the false-work which supported the railroad track, and a portion of the material being used in constructing the north half of the draw span of the new Government and C. R. I. & P. Ry. bridge here, completely divorcing Davenport from Rock Island and Moline, until the ferry boats could be taken out of winter quarters; no trains crossed for several days, seriously interfering with commerce and inconveniencing travelers.

A number of Iowa Hardware jobbers met at Cedar Rapids, Iowa, on the 28th ult., to talk over matters of mutual interest and especially the nail situation. It was resolved to maintain prices fixed by the association.

The advance of fifteen cents per keg on Wire Nails makes the trade just fifteen cents madder than before.

SICKELS, PRESTON & NUTTING CO.

THE CLEVELAND TRADE.

Since our last letter to you, business has continued to show an improvement that is very gratifying. It is true that this improvement has been mainly in the line of Wire Nails and Smooth and Barbed Wire, and the larger movement of Wire Nails can be attributed to the advance made by the manufacturers, taking effect March 1st. Barbed and Smooth wire have moved because the value is low, and there is an absolute necessity for it on the part of country merchants.

The price on Nails seems to be very firmly established, and while there have been rumors flying in the air to the effect that prices will be very much lower, present developments do not justify such rumors. In our opinion the prices will be maintained firmly, and all dealers are safe in buying for their legitimate wants from month to month.

The greatest drawback to business conditions at present

We Make Faucets

That measure a pint, a quart or a gallon accurately. A Barrel Drainer that adjusts automatically to fit in the bunghole. No bung borers needed and no molasses wasted. Coffee, Spice and Drug Mills that grind as you like it. Draw Cut Tobacco Cutters that do not squeeze through, but cut with ease. Our goods are second to none. All are fully warranted. Send for Catalogue to

NATIONAL SPECIALTY MFG. CO.

Lehigh Ave. and Third St. - PHILADELPHIA, PA.

National Barrel Drainer and Measuring Faucet.

is the difficulty in making collections, and the general stringency of the money market. Taking these conditions into account, it is rather a surprise that business is as good as it is.

The near approach of spring weather is creating a demand for Bicycles, and many sales at retail are being made, even in this territory, where it will not yet be possible to use them for thirty days.

Steel goods are in only moderate demand. There appear to be a number of them carried over in the hands of retail merchants, so that the probabilities are that the demand for this season will be light. This is also true of Scythes and Snaths and to a lesser degree of Lawn Mowers. Other seasonable goods are moving in satisfactory quantities.

We have recently issued a catalogue, also some extra pages for our main catalogue, which seem to be appreciated by the dealers who have received them.

McIntosh-Huntington Co.

THE GRAPHITE TRADE.

In comparing the business of a month, with that of the same month of a previous year, the figures on the sales books, representing actual deliveries, are used.

There is a certain fallacy in such a comparison, which shows itself in February of this year, the business by such results, showing a decrease of several thousand dollars, caused by inability to ship some of the larger orders, which have gone over to March, through lack of goods to make the orders complete.

Thus Crucible and Pencils show a percentage of loss, while Graphite Paint and Grease show an increase, and the Lubricating Graphite a marked gain.

In the manipulation of large orders, particularly for Crucibles, goods cannot readily be shipped on account, as carloads are necessary, and where smaller orders draw on the stock, the vacancies must be filled. The proper comparison to show the state of the business should be made semi-annually.

Aside from all this, business is good, and although prices are close, the "up to date" manufacturer can make allowance for such competition.

The Dixon Graphite goods being standard, close prices are not much of a disturbing element.

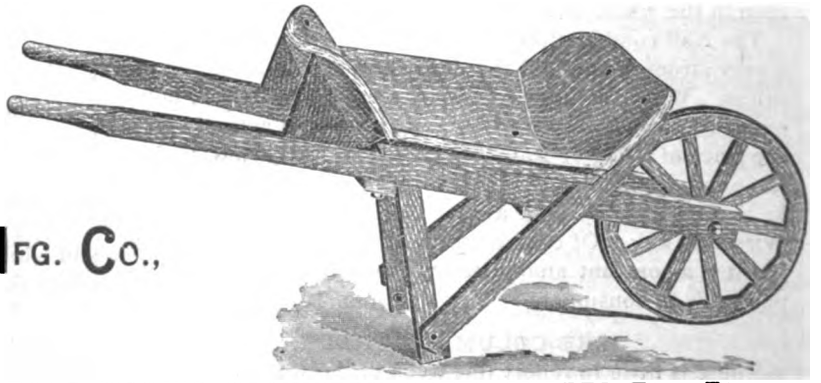
Office business seems to be more and more overwhelming, and the days too short to keep desks clear.

Collections about as usual, which means fair promptness.

Joseph Dixon Crucible Co.

Bicycle Paths for Jersey.

Bicycle riders in New Jersey and New York are to reap the benefit of a bill passed in the Jersey Assembly. It authorizes the raising of money for the construction of bicycle and foot paths along and upon the public roads of New Jersey, and setting apart of such paths to the exclusive use of wheelmen and foot passengers. "Said bicycle and foot paths shall not be less than three nor more than six feet in width, and shall be constructed along and upon such of the public roads of the township, and over such part of any particular public road between the outside lines thereof as the township committee shall determine.



"Said paths when constructed under the provisions of this act shall be set apart for and to be used by bicycle riders and foot passengers, and every person who shall ride or drive a team thereon, except for the purpose of crossing the same when necessary so to do, shall forfeit and pay the sum of $5 to the use of the township, to be sued for and recovered by any person who will sue for the same."

Making Holes in Glass.

Strong glass plates are bored through by means of rotary brass tubes of the necessary diameter, which are filled with water during boring. To the water there is added finely-powdered emery. Thinner glass may be perforated with holes in an easier manner, by pressing a disk of wet clay upon the glass, and making a hole through the clay of the size required, so that the glass is laid bare. Molten lead is then poured into the hole, and lead and glass drop

"SCIOTO" for R. R. or Canal Work.

A thoroughly first class bolted barrow. Full sized Tray. Well planed, cleated, braced and bolted. Legs and cross pieces gained. Knocks down for shipping and is easily set up.

down at once. This method is based upon the quick, local heating of the glass, whereby a circular crack is produced, the outline of which corresponds to the hole made in the clay. When molten lead is poured upon clay so that steam is generated from the moisture, the lead is very apt to fly. Putty, although, of course more expensive, is much to be preferred to clay for use in connection with molten lead.—*American Machinist.*

George III. and Electric Conductors.

About the year 1778 a dispute arose among the members of the Royal Society relative to the form which should be given to electrical conductors so as to render them most efficacious in protecting buildings from the destructive effects of lightning. Franklin had previously recommended the use of points, says the *Architect*, and the propriety of this recommendation had been acknowledged and sanctioned by the Society at large. But after the breaking out of the American Revolution, Franklin was no longer regarded by many of the members in any other light than an enemy of England, and as such it appears to have been repugnant to their feelings to act otherwise than in disparagement of his scientific discoveries. Among this number was their patron George III., who, on its being proposed to substitute knobs instead of points, requested that Sir John Pringle would likewise advocate their introduction. The latter hinted that the laws of nature were unalterable at royal pleasure, whereupon it was intimated to him that a president of the Royal Society entertaining such an opinion ought to resign, and he resigned accordingly. This story, though it does not appear to be in print, having been suppressed in deference to royalty, was current at the time among the members of the society, and there is no doubt of its truth. Dr. Hutton alludes to it in the following extract from his "Mathematical Dictionary": Considering the great attention that was paid by Sir John Pringle to the various and important duties of his office, and the great pains he took in the preparation of his discourses, it was natural to expect that the burthen of his honourable station should grow heavy upon him in a course of time. This burthen, though not increased by any great addition to his life, for he was only six years president, was somewhat augmented by a fall from which he received some hurt. From these circumstances some persons have affected to account for his resigning the chair. But Sir John Pringle was naturally of a strong and robust frame and constitution, and had a fair prospect of being well able to discharge the duties of his situation for many years to come, had not his spirits been broken by the most cruel harrassings and baitings in his office. His resolution to quit the chair originated from the disputes introduced into the Society concerning the question whether pointed or blunt electrical conductors were the most efficacious, and from the cruel circumstances attending those disputes. These drove him from the chair. Such of those circumstances as were open and manifest to every one were even of themselves perhaps quite sufficient to drive him to that resolution. But there were yet others of a more private nature which operated still more powerfully and directly to produce that event, which may probably be hereafter laid before the public."

Russell & Erwin Mfg. Co.'s Fire.

Fire visited the works of the Russell & Erwin Mfg. Co., New Britain, Conn., on the afternoon of March 3d, and twice on March 4th. Tuesday's blaze was the most severe though not nearly so bad as reported in many of the papers. The fires of Wednesday did but little damage. Tuesday's fire was confined to that part of the works known as the lock department which comprises but a very small portion of the company's immense factory, which covers several blocks. The fire was extinguished by the company's fire brigade assisted by the fire department of the Stanley Works, headed by president Hart. The loss is estimated at $80,000, fully covered by insurance.

The company address the trade in the following circular letter:

NEW BRITAIN, CONN., March 5th, 1896.

TO THE HARDWARE TRADE:

A small part of our factory was injured by fire on the 3d inst. There will be no delay in the prompt shipment of regular goods, as we have full stocks of the same here and at our warehouses in New York, Philadelphia, and Baltimore, but on orders for Locks and Knobs that have to be made specially we shall ask the indulgence of our customers for two or three weeks, when we hope to be in a position to fill such orders. We are pleased to state that the loss is much less than the estimates published in the newspapers, and the delay not as serious as would naturally be expected. All of the other departments of our factory are running. Our Screw Works are also intact and orders will be filled promptly. RUSSELL & ERWIN MFG. CO.

Warehouses, New York, Philadelphia and Baltimore.

Old-Time Window Glass.

"The glazier of fifty years ago," said a Maine man of experience in the business, "worked differently from what we do to-day. Glass was very costly then compared with present prices, and much of it was so warped and crooked that it would be a curiosity in these times. Owing to the cost we had to be very careful in setting it, and the glazier of that day had to be a wood carver as well as a man of putty. The warped panes would be laid into the sash and their shape 'scribed' on the wood underneath. This was then cut away, so as to make the glass fit into place. Nowadays the glass is tolerably true, and, besides, it is so cheap that we never stand for a fit. It is sprung into its place, and if it breaks it is thrown aside. The old crooked glass was, some of it, of superior quality. This was known as Boston crown glass or Berkshire crystal. It was clearer and more brilliant than most modern glass. Only the better quality houses had this kind, but there are still many old residences through Maine in which it may be found."—*Lewiston (Me) Journal.*

As we have already announced, the annual dinner of the New England Iron & Hardware Association will be held at Young's Hotel, Boston, on the evening of March 19th. Among those who will speak are the following well-known gentlemen: Ex-Governor John D. Long; Col. John C. Wyman, Providence, R. I.; Hon. Josiah Quincy, Mayor of Boston, and David Williams, publisher of *The Iron Age*, New York.

A six-foot aluminum coffin weighs about 100 pounds, while one of oak weighs nearly twice as much.

Record of Changes.

Alhambra, Ill.—Fred Dauderman has purchased the Hardware store of Jacob Gehrig, Jr.

Bangor, Me.—Thomas Munce has sold his interest in the firm of Patterson & Munce, Hardware merchants, to Z S. Porter, who has been connected with the firm of M. Schwartz's Sons for some time.

Battle Ground, Ind.—Thomas & Barker, Hardware, etc., have been succeeded by W. F. Ridgeway.

Belle Centre, Ohio.—J. W. Blair of Huntsville, has purchased the interests of L. T. Emery in the Hardware store and will move here soon.

Bethany, Ill.—F. B. Sells has bought the Hardware stock of J. H. Crowder.

Bloomington, Ill.—A. F. Rissor, Hardware, have dissolved partnership, owing to the death of A. F. Rissor, and the stock has been sold.

Burlington, Vt.—J. H Holton has been succeeded by the Holton Hardware Co.

Camden, S. C.—Medlin & Wallace, Hardware dealers, have dissolved co-partnership, C. W. Medlin withdrawing to go into business for himself.

Carrollton, Ill.—H. C. Sieverling, Hardware, has been succeeded by Sieverling & Schuman.

Cleveland, Ohio. — Bohn Bros. & Co., Hardware, reported to have dissolved partnership.

Columbus, Ga.—Abbott & McKee, wholesale and retail Hardware, etc., have dissolved partnership, and the business will be continued by Abbott & Brinson.

Covington, Tenn. — Herbert Hamilton, Hardware, has been succeeded by the Covington Hardware Co.

Devine, Tex.—G. A. Schley, Hardware, etc, has been succeeded by J. A. Whitfield.

Duluth, Minn.— R. R. Fonward & Co. have purchased the Hardware business of the West End Hardware Co.

Dunkirk, N. Y.—Bloss & Weiner, Hardware, reported to have dissolved partnership.

Fairfield, Ia.—John Gochner, for many years in the employ of J. W. Burnett & Co., has purchased the Hardware stock owned by that company and will continue the business at the old location near the C. B. & Q. depot.

Farnam, Neb.—M. D. Watt & Co. have purchased the Hardware and harness stock of Louis Tonne, and will continue the business.

Gibtown, Tex.—A. H. Eaves, Hardware, have been succeeded by A. H. Eaves & Co.

Hemet, Cal.—D. O. McKee has purchased the stock of Hardware of Messrs. Heffelfinger & Co., and will hereafter conduct the business.

Laredo, Tex.—J. Deutz & Sons, Hardware have been succeeded by Deutz Bros.

Lowville, N.Y.—Fowler Bros., Hardware, T. B, Fowler retires.

Masonville, N. Y.—J. I. Boice and Chas. Wade have formed a co-partnership and have purchased the Hardware business of McKinnon & Culver. Both gentlemen have had experience in the business.

Monmouth, Ore. — Frazer & Cattron, Hardware, reported to have dissolved partnership.

Monticello, N. Y.—The firm of Smith Bros., dealers in Hardware, has been dissolved by mutual consent.

Potsdam, N. Y.—Howard Eastman has purchased of E. A. Everett an interest in the Clark Hardware business.

Poughkeepsie, N. Y.—Kirby, Du Bois & Boyd, wholesale and retail Hardware, have been succeeded by Du Bois Bros.

Redfield, S. D.—King & Obrecht, Hardware, reported to have dissolved partnership.

Rockford, Ill.—Charles Hunter, the Hardware merchant on East State Street, has sold out his stock to T. F. and W. H. Palmer, who will continue the business at the present location. Mr. Hunter has purchased the stock of Oliver Drake on West State Street and will continue in the Hardware business at the latter's store.

Saybrook, Ill.—A. Moran has sold his Hardware stock to James Stine & Son.

Springfield, Mass.—Thayer & Law, Hardware, reported to have dissolved partnership. Mr. Law continues the business.

Springfield, Mo.—The partnership heretofore existing between Dr. W. H. Park, W. H. Howard and M. E. Bunger as the Park Hardware Co. has been dissolved. Dr. W. H. Park assumes all liabilities of the firm and all outstanding debts are payable to him.

Wahpeton, N. D.—M. T. Stevens, one of the oldest and best known merchants in the city, has sold his stock of Hardware, also the building located on Dakota Avenue, to W. W. Jamieson, of this place, who will continue the business in the present location.

Improvements and Removals.

Barberton, Ohio. — Johnson Bros. have just completed a most creditable improvement in their Second Street Hardware store, by putting in entirely new shelves and boxes throughout.

Lewiston, Minn.—Gensmer & Son have recently removed their Hardware business to Caledonia.

Business Embarrassments.

Buffalo, N. Y.—C. Berger, Hardware, reported to have failed.

Chicago, Ill.—R. S. Luquer & Co., dealers in Hardware, etc., have made an assignment to Robert H. Weems.

Georgetown, Ky.—John S. Montgomery, Hardware merchant, made an assignment recently to James Bradley for the benefit of creditors. The assets and liabilities are not yet known.

Knoxville, Tenn.—Wm. Jenkins, a retail Hardware dealer, assigned to W. A. Galbraith. Liabilities, $5,400; assets, $8,000.

Marlboro, Mass.—C. A. Estabrook, who runs the Hardware store in Frye's Block, has made an assignment to W. H. Watts, of Boston.

New Orleans, La.—Knechet & Bauman, Hardware dealers, have made an assignment for the benefit of creditors. Assets, $6161.83; liabilities, $9442.08.

Olympia, Wash. — Robert Frost, Hardware, reported to have assigned.

Redwood Falls, Minn.—Laid & Dorberg, Hardware dealers, have made an assignment. Liabilities, $17,000; assets, $15,000.

Richmond, Va.—William Myers, dealer in Hardware, stoves, etc., has made an assignment.

Sleepy Eye, Minn.—Schneider & Schneider, Hardware and machinery dealers, have made an assignment for the benefit of their creditors. Liabilties, $7000; assets, $5000 less.

Springfield, Ohio.—The Phil S. Wiseman Hardware Co. reported to have failed.

Toledo, Ohio.—Edward C. Grossenbacher, Hardware dealer, Cherry Street, has made an assignment. The assets are reported to be sufficient to cover the liabilities.

Zanesville, Ohio.—W. A. Fillmore, Hardware, has assigned, liabilities, $12,000; assets about the same.

Burglaries in Hardware Stores.

Lancaster, Ohio.—S. P. Seifert, $75.

Napa, Cal.—H. Shwarz, $200.

New York, N. Y.—W. N. Boersat, No. 2307 Third Avenue, small loss.

Plainville, Neb.—N. M. Nelson & Co., $30.

Racine, Wis.—Jacob Mohr, $150.

Fires in Hardware Stores.

Binghampton, N. Y.—Babcock & Stowell, Hardware dealers, stock entirely destroyed by fire.

Grifton, N. C.— Frank Pittman, Hardware, burnt out recently.

New York, N. Y.—The Hardware store of the H. Kugler Co., Nos. 10 and 12 Division Street, was damaged to the extent of $2000 recently.

San Francisco, Cal. — Levison & Co's Hardware store, Nos. 206 to 210 Commercial Street, damaged by fire.

West Palm Beach, Fla.—W. H. Parker, Hardware, destroyed by fire at a loss of $6500; insured for $3500.

Utica, N. Y.—The Hart & Crouse Co., incorporated by H. Gilbert Hart, Clarence B. Crouse and Daniel N. Crouse; to manufacture all kinds of furnaces, heating apparatus and boilers, and do a general foundry business. Capital stock, $226,000.

Changes and Removals.

Decatur, Ill.—The Spery Cutlery Co., St. Louis, has located here and will occupy the old shoe factory building. Work will be commenced immediately with fifty hands.

New Buildings and Improvements.

Birmingham, Ala. — The Birmingham Hardware Specialty & Machinery Co. contemplate rebuilding their plant, which will be 100x50x16 feet.

Green Ridge, Mo.—The Hecla Mfg. Co., of Illinois, will erect factory building, for the manufacture of chisels, augers and all kinds of edged tools, etc. Capital stock, $150,000.

Tacony, Pa.—A large new tool factory is to be added to the Disston Saw Works. The building will be of brick, two stories, 100x70 feet.

Recent Fires.

Lancaster, Pa.—The shops of the Chalfant Hardware Mfg. Co. were burned recently. The loss was $30,000; insurance, $17,000.

General.

Anderson, Ind. — The Anderson Bolt Works will be taken out of the hands of the receiver and work will resume as soon as arrangements can be perfected. At a meeting of the stockholders held in Mr. Doxey's office recently the following officers were selected: President, C. T. Doxey; vice-president, A. J. Brunt; secretary, J. L. Forkner, and manager, J. R. Brunt.

Haydenville, Mass.—The stockholders of the Haydenville Brass Co. at their annual meeting held recently reelected the old board of officers as follows: President and treasurer, H. H. Beals, of New York; vice-president, L. H. Beals, of Westfield; secretary, R. C. Wilson, of New York. These officers, with C. B. Hosford, of Haydenville, and Charles Hess, of New York, will constitute the board of directors.

The Wheel and England.

Take the Great North Road. Except upon market days one might have traveled any fifty miles along it between Highgate and York without meeting fifty people. The famous old inns were in the condition of the "Dolphin's Head, by J. Mellows," as described by Dickens in his capacity as an uncommercial traveler. Towns which literally lived by the road had drifted into a helplessly somnolent condition, from which no apparent human agency could awaken them, and the stranger thereto was stared at as much as if he had been a Highlander or an Iroquois in full war paint. The highway itself being of no particular value to anybody since the Great Northern Railway began to whirl the old patrons of the road along at forty-five miles an hour, was allowed to decay, and in wet seasons or snowy weather was well-nigh impassable.

The rage for wheeling has produced a rapid transformation. Station yourself at any point you like, and try to count the machines which pass on a fine Saturday afternoon during the course of an hour, and you will soon abandon the task as hopeless. Then, consider that every rider of every machine spends something during his trip, even if it be but the cost of a temperance drink; consider that a very large number of Saturday riders sleep out and make good meals during their journey; that they are constantly spending something over and above their actual traveling expenses; that the wonderful extension of our acquaintance with our own country resulting from these peaceful invasions of it by the inhabitants, not merely of the metropolis, but of every city and considerable town in the land, has led to the refurbishing up of such local lions as the castle, or the abbey, or the great Somebody's birthplace, or the waterfall, or the view (the inspection of all of which means the expenditure of money), and an approximate idea may be gained of the influence upon national trade which this pastime alone exercises.—*Chambers' Journal.*

Being a Blacksmith.

Among the seven trades which a student in mechanical engineering must learn at Cornell is that of the blacksmith. Occasionally there is a protest, but it is never heeded. One dude ten years ago was unusually averse to soiling his hands. But he had to work at the forge just the same. Last fall he went to Professor Morris and thanked him for being compelled to learn blacksmithing. "Why?" asked the professor. "Why, you see," replied the former dude, "I am now superintendent of a mine way back in Colorado. Last summer our main shaft broke, and there was no one in the mine but myself could weld it. I didn't like the job, but I took off my coat and welded that shaft. It wasn't a pretty job, but she's running now. If I couldn't have done it, I'd have had to pack that shaft on mule back and send it 300 miles over the mountains to be fixed, and the mine would have shut down till it got back. My ability to mend that shaft raised me in the eyes of every man in the mine, and the boss raised my salary."—*Scientific American.*

J. C. McCarty & Co., No. 97 Chambers Street, New York, have been appointed agents by the Syracuse Specialty Mfg. Co., Syracuse, N. Y., for the sale of their bicycles, which include the "Frontenac," $100, and the "Saxon," $75, wheels. They have arranged a suitable showroom at their store, and invite the trade to inspect this line of wheels.

Two-thirds size. Ten Thousand Miles, Not One Thousand. **Price, $2.** The American Cyclometer, plain as A, B, C. Read at a glance; after you read it no guesswork. Does not get out of order if you run it backwards like some others on the market. Not a Dinky Toy with steel parts so small that the dampness will rust the mechanism and eat away the small pivots. Not built just well enough to last three months, but built well enough to last at least five years. It goes on the right of fork so that you can put your lantern on the left, where they are usually made to go. AMERICAN CLOCK CO., 14-15 Tremont Row, Boston, Mass., U.S.A.

Hardware Dealers

can net a good profit by handling **Bicycles** of recognized merit, having a well-established reputation. Unknown and inferior wheels are not profitable, even though the discount be unusually large. The . . . . . .

Remington Bicycles . .

like other **Remington Products,** enjoy a universal reputation for excellence and reliability. Eighty years' experience and up-to-date methods have brought the **Remington** to the front. . . . . .

Agencies are now being arranged in unoccupied territory. Handsomely Illustrated Catalogue, fully describing new models and their exclusive improvements, mailed free to any address.

REMINGTON ARMS COMPANY,

313-315 Broadway, New York City.

MONARCH

THE APEX OF BICYCLE PERFECTION.

IN our 1896 Models we have incorporated all the good things known to the best Bicycle Makers, including several features peculiarly our own. They are the crowning glory of our unparalleled success as builders of high-grade wheels—the concentrated extract of bicycle goodness.

WE also make **DEFIANCE,** the best of lower-priced wheels, especially adapted to the Jobbing Trade. Eight models for adults and children, $75., $60., $50 $40. Fully guaranteed.

Four Models,

$80 and $100

KEUFFEL & ESSER CO.,

Manufacturers of **MEASURING TAPES, Etc.,**

BRANCHES:
111 Madison Street, Chicago.
708 Locust Street, St. Louis.

127 FULTON STREET, NEW YORK.

The **Home** Steel Tape is intended to supersede woven tapes (metallic or linen) by reason of its incomparably greater accuracy and its very low price. The **Home Tape** has a red bent **sewed leather case,** with **brass-lined mouth piece, with anti-friction roller.** The folding brass handle is practically flush. The steel line is ¼ inch wide, and sharply and plainly graduated. The graduations and figures are bright, while the ground surface is nearly black. It is to all appearances a **First-Class Steel Tape,** but it is not to be compared with our well-known Excelsior steel tapes. Woven tapes are used on account of their very low cost for many purposes for which a more reliable tape ought to be employed, like in the building trades, construction and railroad work, etc. The low priced **Home Steel Tape** will therefore be welcomed as meeting a frequent requirement.

HOME STEEL TAPES.—Feet divided to inches and 1-8 inches:

25 feet.—No. 80, $24.80 doz. **75 feet.—No. 82, $56 40 doz**
50 feet.—No. 81, $42.00 doz. **100 feet.—No 83, $72.00 doz.**

We can furnish these tapes also with feet divided to 1-10 and 1-100.

Liberal Discounts to the Trade.

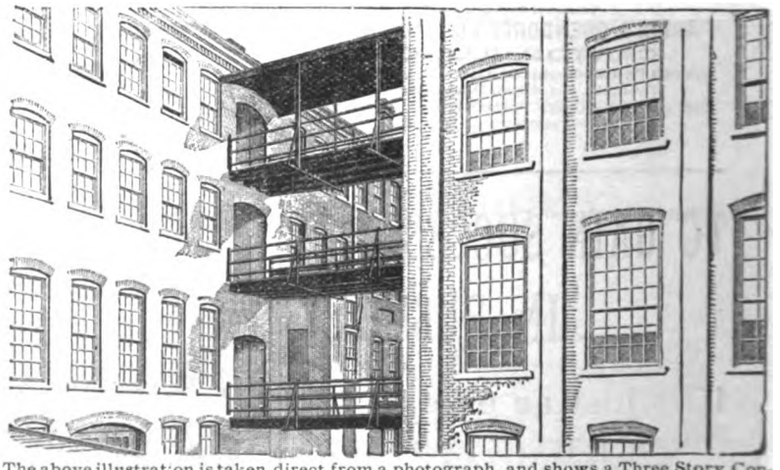
The above illustration was taken direct from a photograph and shows the interior of a new Forge Shop Building designed and built for our own use at East Berlin, Conn. The building is 60 feet in width, 300 feet in length and constructed entirely of iron and glass, no woodwork, except window sash, being used in the construction. The roof is covered with our Patent Anti-Condensation Corrugated Iron, and the building is lighted by high side lights and ventilator skylight. The interior of the building is ventilated by one of our improved ventilators extending the whole length of the building, with iron shutters on the sides opening and closing with cords from the floor. We believe this to be the most complete and perfect forge shop ever constructed, and invite examination.



THE BERLIN IRON BRIDGE CO.,

Engineers, Architects and Builders of

Iron and Steel Buildings, Roofs,

Bridges, etc., etc.

Send for Illustrated Catalogue.

The above illustration is taken direct from a photograph, and shows a Three Story Connecting Bridge, designed and built by us for The Winchester Repeating Arms Co., at New Haven, Conn. When desired we can furnish these bridges entirely enclosed in corrugated iron. The connecting building being of brick—the bridge being of iron, and the door openings between the two buildings being covered with our corrugated Iron Fire-Proof doors—there is no danger whatever from fire communicating from one building to another.

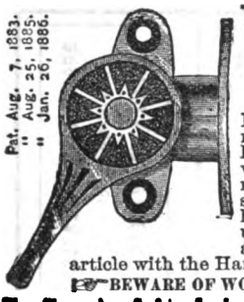
Polar Star Instant Ice Cream Freezer.



A Marvel to all who behold it in operation.
Size, 21x7x7. Retail Price $3.75. Capacity unlimited
It makes perfectly smooth ice cream with all milk. Cream added makes it somewhat richer, but not smoother. It makes very superior, smooth water ices, frozen fruits, frozen custards, sherbets, etc., and is a very simple, convenient and economical freezer.
No Gearing, cogs or fixings to get out of order.
Noiseless in operation. A child can operate it. Makes a plate of ice cream in 30 seconds or a quart in 5 minutes. All other quick freezers merely SCRAPE it off a tin surface of some kind, but do not BEAT IT or WORK IT.
Our Freezer **Mixes, Mashes, Palls, Grinds** and **Whips** the cream more in **30 seconds** than any paddle freezer does in **30 minutes.** Dealers will do well to investigate this promptly. Correspondence solicited.
Manufactured solely by Polar Star Freezer Co.,

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 99 Cedar Street, New York City.

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

ADJUSTABLE JAW CUTNIPPER

IT WILL LAST A LIFETIME.

The jaws are detachable—may be taken off, ground and adjusted when worn. A quarter of an inch may be ground from each jaw without impairing its usefulness. If the jaws are ever used up, new ones can be had for 50 cents a pair. Three styles of jaws are made,—(C) for ordinary use, (M) for cutting music wire, and

For Bicycle Use, a special pair of jaws (B), of a shape just right for cutting off the ends of wire in bicycle rims.

HERE IT IS.

The BOSS LANTERN LAMP.

Patented Nov. 27, 1894.

NO wind or hurricane, however strong, can blow it out. Any No. 2 crimped top chimney will fit it. Chimney does not get hot, because the cold air goes down into the chimney around the sides—the hot air comes up through the center of the chimney drawing the flame up several inches, making the light 5 candle power, producing a cold draught under the flame. The candle melts very slowly, making half candle last many hours.

There is a standing offer of **One Hundred Dollars** to any one who can take his Hat, Fan or any thing else and Fan the light out. It is impossible to fan the light out or for the wind to blow it out. Sample free, prepaid.

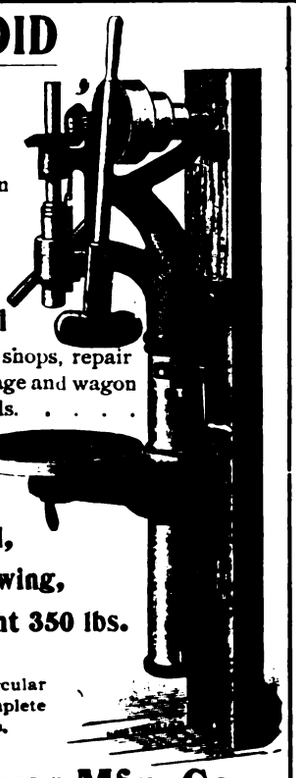
Toledo Wheelbarrow Works, Toledo, O.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.



THE

AMERICAN WICK

Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

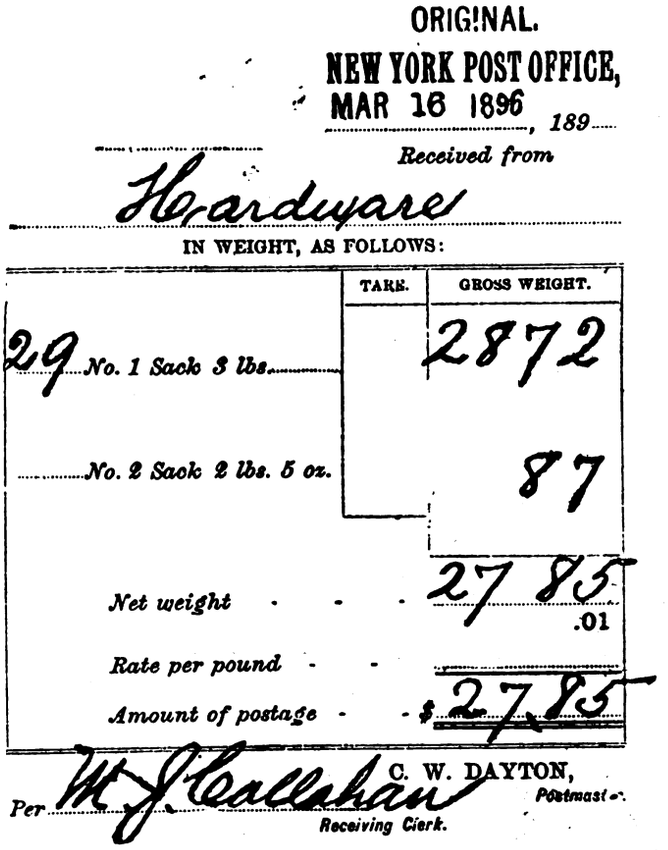
WE GUARANTEE THAT THE CIRCULATION OF
"HARDWARE" DURING 1896 WILL EXCEED

ONE HUNDRED AND TWENTY THOUSAND

AND THE SAME WILL BE PROVEN BY THE
PUBLICATION ON THIS PAGE, IN EACH ISSUE,
OF THE POST OFFICE RECEIPTS FOR COPIES
MAILED THE PRECEDING ISSUE.

Business affairs seem to be improving, slowly but surely. Reports from all directions bring encouragement—not of the boom character, but as indicating that the country is on the upward grade. Were not this a year of presidential campaigns, the outlook would be even more encouraging.

The New England Hardwaremen and their associates in the iron industry had a most successful dinner at Boston on the evening of the 19th, a report of which is found elsewhere i these pages. They know how to entertain in Boston; and the New Englander, stern and rigid as he may sometimes seem, knows how to have a good time, when the opportunity and the hour come together in the right proportions.



"Hardware" for March 10th.

The commendations we have received from advertisers and others, for making an exact and indisputable showing of circulation in each issue, would give assurance that we were pursuing the right course, had there been any doubts upon that point before.

The square and honest way is the *best* way.

In fact, the square and honest way is the *only* way.

"Uncle Sam" has furnished our readers with the following diagram of our exact circulation for March 10, 1896:

ORIGINAL.

NEW YORK POST OFFICE,
MAR 16 1896, 189...

Received from Hardware

IN WEIGHT, AS FOLLOWS:

	TARE.	GROSS WEIGHT.
29 No. 1 Sack 3 lbs.		2872
No. 2 Sack 2 lbs. 5 oz.		87
		2785
Net weight		.01
Rate per pound		
Amount of postage		$27.85

Per W. J. Callahan, Receiving Clerk.

C. W. DAYTON, Postmaster.

This may be set forth so plainly that he who runs may read, in the following formula:

2785×16=44,560
44,560÷9¼=4570
4570+725=5295

Which means that 44,560 ounces of *Hardwares* equal 4570 copies, when divided by 9¼ ounces, the weight of one number; add to these 725 copies mailed out under postage stamps, delivered by carrier in New York City, and kept for office use, and we have a total of 5295 issued as our semi-monthly edition of March 10, 1896.

The Problem of Good Roads.

A great many people who take a superficial view of things, are under the impression that the question of good roads is merely one interesting the wheelmen,

Digitized by Google

and that the problem which so many practical men are now figuring out, is merely whether a bicycle rider shall have a more easy path beneath his wheel, than the country roads now existing.

The error of such conclusion is very clearly shown in a report made a few days since by the committee on railway transportation of the New York Board of Trade and Transportation.

It is there clearly shown that the question is one which interests each citizen, whether he hauls freight, or pays for its hauling; sells goods, or buys produce for his own use or to sell again; pays taxes; runs a farm, or has dealing with farmers; or has even the most remote connection with the material interests of the community about him.

The estimate is made by the good roads commission of New York, that during last year the people of the United States paid $570,000,000 more to market their produce than would have been the case had good roads existed all over the land. This is a tremendous figure, in view of the competition we are meeting from the world at large, and the close figuring required to hold our own in the markets of the world.

Here are some statements and figures worth consideration, taken from the report above referred to: "Before the construction of stone roads in Burlington County, N. J., it cost fifteen cents per basket to market truck; now it costs three cents." "There is no tax so great as the tax of bad roads, and of all persons who have to pay such a tax none have to pay it to so great an extent as does the farmer, for he has to haul all his produce to market over these roads, and also a large part of his supplies for his home over the same." "The cost of pulling a ton of freight one mile is as follows: On sand, forty cents; on hard earth, twenty cents; on macadamized roads, five to ten cents, according to perfection of road; on iron tram rails, one cent."

The following extracts are from the second annual report of the commissioner of public roads, of New Jersey:

"As all progress should be along the best lines, and as some of the best authorities predict, the coming highways will be of steel. The claims as presented are that the average cost of a macadam roadbed sixteen feet wide is about $7000 per mile. The cost of a double steel track highway, sixteen feet wide, filled in between with broken stone, macadam size, is about $6000 per mile. The cost of a rural one track road, $2000 per mile. The rails to be made of steel the thickness of ordinary boiler plate, and to be formed in the shape of a gutter, five inches wide with a square perpendicular shoulder half an inch high, then an angle of one inch outward, slightly raised. This forms a conduit for the water and makes it easy for the wheels to enter or leave the track. The advantages of steel rails are, first, longer wearing qualities than stone; second, one horse will draw on a steel track twenty times as much as on a dirt road, and five times as much as on macadam. We would therefore recommend that legislation be enacted and appropriations be made by which the commissioner should be empowered to authorize the construction of some experimental steel track roads."

The gentlemen to whom we are indebted for the report from the New York Board of Trade and Transportation above referred to, F. B. Thurber, Seth E. Thomas and Jno. A. Elmendorf, supplement and clinch their argument by the following pointed proposition:

"In conclusion, we submit the following resolution: *Whereas*, The Legislature of this State last year authorized the appointment of a Commission to consider the subject of good roads, and said Commission has reported in favor of the State taking action similar to that of sister States in aiding the construction of improved highways, and bills are now pending in the Legislature for that purpose.

"*Resolved*, That this Board considers the Governor and Legislature pledged to a policy which will enable our State to share in the enormous benefits conferred on the public by good roads, and we earnestly urge the prompt passage by the Legislature, and the approval by the Governor, of an improved road law, appropriating at least $500,000 for this purpose, a sum much less in proportion to our area and assessed valuation than our sister States have appropriated."

The Thompson-Lang Hardware Co.

The Thompson-Lang Hardware Co., of Hillsboro, Texas, were granted articles of incorporation recently, the capital stock being $50,000. The incorporators are Messrs. J. R. Thompson, W. R. Lang and J. R. Thompson, Jr., who have heretofore composed the firm of Thompson, Lang & Co. The firm will handle a full and complete line of Hardware, farm implements, buggies, wagons, etc., and in connection run an extensive plumbing and tinning business. They have recently finished a new brick building 50x120 feet, fronting on Gould Street, adjoining their warehouse, which they now occupy in connection with their store fronting on Elm Street, giving them floor space of over 12,000 square feet. The officers of the company are J. R. Thompson, president; W. R. Lang, vice president and secretary; J. R. Thompson, Jr., treasurer. The president, J. R. Thompson, has been in business in this city since 1881, commencing business in the building on Elm Street, which the company still occupy, and has a reputation as a good business man, excelled by none in Hill county. W. R. Lang has been connected with the firm for several years, and his energy and good business methods have done much toward the upbuilding of the large trade they enjoy. J. R. Thompson, Jr., who entered the firm in January, 1895, is a young man of sterling worth and good business talents. The company enters its new career with bright prospects for a continuation of the past success of the firm.

Butterfield & Co.'s Catalogue.

Butterfield & Co., Derby Line, Vt., and Rock Island, Canada, have gotten out an attractive catalogue for 1896. The cover is in light blue, bearing in gold lettering the name and locations of the company. The company manufacture stocks and dies, solid die plates, Reece's new crew plates, taps and dies for all uses, Young's axle cutter and tools for engineers' and steam fitters' use. The company are offering an entirely new line of machinists' Derby, blacksmiths' and bicycle screw plates, shown on pages twelve to twenty-one, inclusive, of the catalogue. The catalogue is conveniently indexed. It is an attractive and useful document for any Hardwareman.

The retail branch of the Pope Mfg. Co., Nos. 219 to 223 Columbus Avenue, Boston, Mass., was visited by a disastrous fire on March 12th. The contents of the building, including nearly 1800 wheels, 5000 tires, 20,000 bicycle parts, and some 175 second-hand wheels used in the riding academy, were ruined. The loss is estimated at $25,000, fully covered by insurance. The building was of six stories and was the personal property of Colonel Pope.

The Central Hardware Co., of Frederick, Md., has been incorporated by Douglas H. Hargett and others; for mercantile purposes.

National Association of Manufacturers.

The following are extracts from a circular sent out by the National Association of Manufacturers, stating the purposes of the Association:

"The National Association of Manufacturers is an organization of business men for business purposes. They are associated together simply for the purpose of extending and widening the avenues of trade and commerce, and for removing the obstacles in the way of fair competition in our own markets, and for improving the conditions governing our trade with other countries. Every question with which this Association has to deal is to be considered from a purely business and practical standpoint. It is the aim of the organization to represent every class of manufacturing interests without regard to political or sectional lines. In order that the character of the work which this Association has undertaken may be more fully and more clearly understood, some of its principal specific purposes are outlined briefly as follows:

EXTENSION OF OUR MERCHANT MARINE.

"The decline of American shipping from a position of supremacy upon the seas to an insignificant place in the world's merchant marine is one of the most deplorable features in this country's history. The increase in steam tonnage carrying the United States flag is not sufficient to make up for the decrease in sailing vessels, so that the total tonnage of our merchant marine shows no increase. Forty years ago, when the shipbuilding industry was most active, 583,450 tons of new steam and sail tonnage were built in a single year, while during the fiscal year 1894–95 only 132,719 tons of carrying capacity were added to our merchant marine. Forty years ago over 63 per cent. in value of the imports into this country by sea and over 70 per cent. of the exports to foreign countries were borne by American vessels, but last year they carried only 15 per cent. of our imports and but 8.2 per cent. of our exports. In the belief that all our maritime commerce should be carried in vessels sailing under the United States flag, the National Association of Manufacturers declares itself in favor of a judicious system of subsidies in order to restore and extend the merchant marine of this nation.

CONSTRUCTION OF THE NICARAGUA CANAL.

"The commercial importance of the Nicaragua Canal is generally recognized, and the construction of this great work seems assured. It is essential to the welfare of the United States as well as to the commercial interests of the country, that this canal should be constructed and operated under the control of the Federal Government. The completion of the canal would open a new channel of trade between the Atlantic and Pacific ports of the United States, and would give great impetus to American trade with the Orient and the west coast of South America. The commercial and strategic importance of the Nicaragua Canal cannot be measured in money, and whatever might be the cost of its construction and operation, this country could not afford to permit the control of the enterprise to pass into the grasp of another nation, or to be risked in the hands of a private corporation. The National Association of Manufacturers has placed itself on record as favoring the construction and operation of the canal under the control of the United States Government, and to hasten the undertaking of this great enterprise is one of the aims of this Association.

DEPARTMENT OF MANUFACTURES AND COMMERCE.

"The movement inaugurated by this Association for the creation of a Federal Department of Manufactures and Commerce has met with singular approval and support from business interests of many kinds. Agriculture has its representation in the Cabinet of the Federal Government, while the manufacturing interests of the country, with an annual aggregate of products nearly three times as great in value as all the products of agriculture, have no representative in the departments. Every consideration demands that the manufacturing interests, which are the largest factor in the prosperity of the nation, should have the service of a cabinet officer, whose duty it should be to promote in every possible manner the welfare of the productive industries. As the greatest manufacturing nation in the world, we are still behind countries of far less importance in our agencies for promoting and developing industrial and commercial interests. Such governmental institutions as the proposed Department of Manufactures and Commerce have proved to be of the utmost importance in stimulating the trade of other nations." The above will give some idea of the scope and importance of the Association.

FORM OF ORGANIZATION.

The organization of the National Association of Manufacturers embraces the customary president, treasurer and secretary, and in addition a vice-president for each State and Territory. The executive committee, in which is vested the active management of the affairs of the Association, consists of the president, treasurer and secretary, the vice-presidents from the twelve States which produced the largest output of manufactured goods according to the latest Federal census, and four members-at-large elected by the committee.

The present officers of the Association are as follows: President, Theodore C. Search, Philadelphia, Pa.; treasurer, Robert Laidlaw, Cincinnati, Ohio; secretary, E. P. Wilson, Cincinnati, Ohio. Executive Committee: Vice-presidents, Warner Miller, New York City; John H. Converse, Philadelphia, Pa.; John B. Kirk, Chicago, Ill.; Thomas P. Egan, Cincinnati, Ohio; Frederick W. Sivyer, Milwaukee, Wis.; P. L. Studebaker, South Bend, Ind.; Elwyn W. Lovejoy, Lowell, Mass.; Benjamin Atha, Newark, N. J.; John B. Howarth, Detroit, Mich.; Pliny Jewell, Hartford, Conn.; H. L. Story, Altadena, Cal. At-Large: Charles A. Schieren, Brooklyn, N. Y.; James Phillips, Jr. Fitchburg, Mass.; J. F. Hanson (vice-president), Macon, Ga.; C. D. Mitchell (vice-president), Chattanooga, Tenn.

A copy of the taking little "Laundry Journal" issued by the Rocker Washer Co., Fort Wayne, Ind., has come to hand. It contains a full illustrated description of the "Rocker Washer" manufactured by them, the chief points for which are contained in the following description: "The Rocker Washer produces five times the agitation of the old closed washers, and in addition, forces the water through the clothes as they strike against the corrugated ends, and by means of the inclined triangular devices on the sides, changes the flow of the water, turns the clothes over with every throw of the rocker, and thus exposes all parts of the clothes to the corrugated sides and to the cleansing action of the flow; all without any possibility of tearing or injuring the most delicate fabrics. It does its work quickly, thoroughly and completely, so that no hand rubbing is required."

A. Tredway & Sons Hardware Co., Dubuque, Iowa, have issued a catalogue of bicycles and bicycle sundries. The company are the sole distributing agents for that section of the country for the Tribune, manufactured by the Black Mfg. Co., Erie, Pa. They carry the Wizard, a wheel made for them, and the Sir Julien, Lady Julien, Robin Hood, Rosalind, and three juvenile wheels. Their bicycle sundries include lamps, bells, cyclometers, wrenches, pumps, saddles, cements, etc.

The Crosser Hardware Co., of Delta, Colo., has been, incorporated by George E. Blake, W. H. Crosser and J. B. Bassler. Capital stock $9,000.

All About "Expanded Metal."

A catalogue of somewhat unusual interest has just been issued by the associated Expanded Metal Companies. This important industry is now represented by the following companies, each of which is a licensee for the manufacture, sale or construction of the material in its specially assigned territory: The Northwestern Expanded Metal Co., Chicago; the Central Expanded Metal Co., Pittsburg and New York; the St. Louis Iron, Wire & Expanded Metal Co., St. Louis; the Expanded Metal Fireproofing Co., Chicago; the Expanded Metal Fireproof Construction Co., New York; the Eastern Expanded Metal Co., Boston; the Southern Expanded Metal Co., Washington and Baltimore; Merritt & Co., Philadelphia.

As stated in the book, which is a neatly bound volume, 7 inches by 4 inches, of 132 pages, it is the joint production of the eight corporations, and is a comprehensive treatise on "Expanded Metal and its uses in Fireproof Construction." The whole scheme of the book is to show what has been accomplished in the line of fireproofing work, and it may be said that the range of their operations is most comprehensive, as there is no feature of this class of work which they have not performed. They have no less than nine different systems of floor construction, besides partitions; walls, ceilings, domes, coves, etc., etc. The book is filled with illustrations of the various kinds of work which they have performed, together with long lists of prominent buildings erected by leading architects in all parts of the country.

In addition to a thorough exposition of the uses of Expanded Metal, the book contains a valuable chapter on engineering topics as applied to architecture, edited by Geo. S. Hayes and Jas. E. Boatrite, civil engineers of New York. This department contains twenty full-page tables showing the carrying capacity of wood beams, steel I beams, round and square cast columns, steel columns, etc., etc., all figured according to the building laws of New York, Boston and Chicago. These tables are of special interest to engineers and architects, as they will serve as time-savers in designing all classes of buildings. This feature alone will make the book of great value to the entire building fraternity.

Davis & Stevens Mfg. Co.'s Pumps.

The Bicycle Pumps here shown are manufactured by the Davis & Stevens Mfg. Co., Seneca Falls, N. Y. Fig. 1 is the Cyclone No. 3, which is described as a desirable and

FIG. 1.

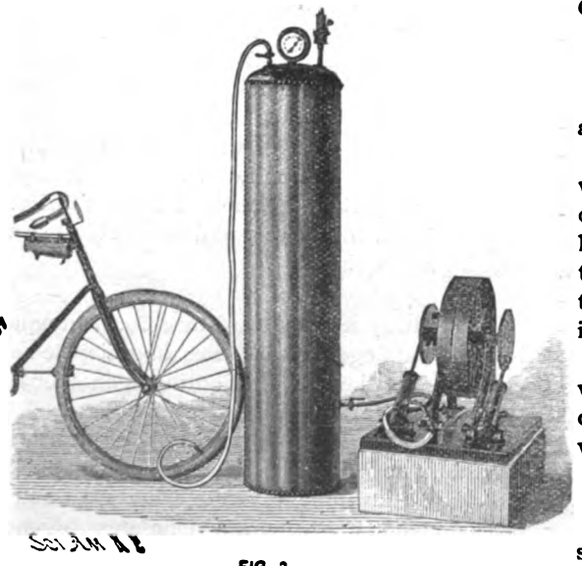

FIG. 2.

efficient pump. The cylinder is nickeled and is 1½ by 12 inches. It has a steel plunger and capped leather packing and a steel ball valve. The price is $1.75. Fig. 2 represents the Power Cyclone No. 1, which is designed for bicycle use. It has two brass cylinders each 2 by 8¼ inches, and is provided with tight and loose pulleys 18 inches in diameter. The pump is fitted for power only, or for hand and power both. These pumps can be furnished with 21 or 30-gallon tank, pressure gauge, safety valve, hose and stop cock. The price of the pump is $20, or complete with pump, 30-gallon tank, stop cock, hose and connections, $35.

The Champion Heater.

A new heater is now being put upon the market by the Turner Specialty Co., No. 146 Franklin Street, Boston, called the Champion. It is an ingenious contrivance, which can be attached to a lamp chimney with absolutely

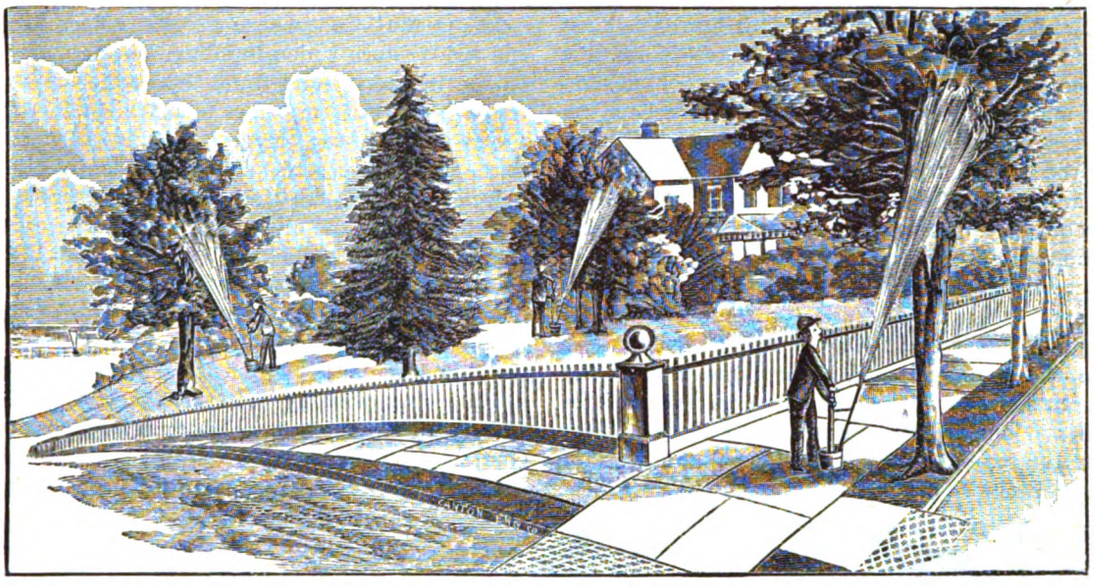
no interference with the light. This heater has a fan wheel between two disks, making a revolving current of hot air, thus utilizing the waste heat. Large rooms can be heated with it, also water, etc. It is claimed to be "the best yet put upon the market," and sales are already quite large. Other specialties will soon be brought out by this company.

The Atkins Co. Fire.

E. C. Atkins & Co., saw and tool manufacturers, Indianapolis, Ind., make the following announcement:

"On the morning of the 10th, we lost a portion of our works by fire. The fire was a disastrous one, destroying our Band and Hand Saw departments, and causing us a loss of something over $100,000, and a temporary interruption of business in those departments; but we will have them in running order so that we can supply our customers in a short time.

"Our Cross-cut, Wood Saw and Circular departments were not injured by the fire, and orders for goods in those departments will have our usual prompt attention, and we will resume business in all departments at an early day."



E. C. ATKINS & CO.

The Fenton Metallic Mfg. Co., Jamestown, N. Y., some six weeks ago established a sole European depot for Fenton bicycles at No. 35 Rue Vivienne, Paris, France. The wheel is meeting with a most enthusiastic reception there, and the company have received quite a number of cable orders from the agency, whose managers write that "everything is booming in the direction of Fenton Wheels."

Smith's Patented Novelty Force Pump and Sprayer.

The illustrations herewith are of Smith's Patented Novelty Force Pump and Sprayer, offered by the Star Mfg. Co., Canton, Ohio. The company remark that the simplicity of construction and ease of operation are some of the qualities that recommend the sprayer. The air valves and hinges are made of copper, and a perforated bottom prevents all substances from getting into the pump that would

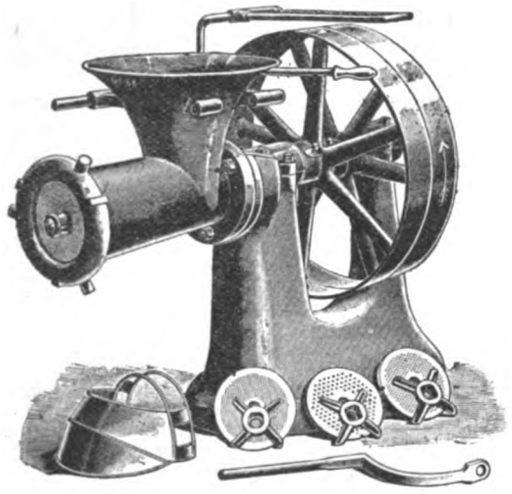
otherwise obstruct the valves. The manufacturers state that the sprayer is always ready for use, is not liable to get out of order, and is so light and convenient that it can be used easily and effectively by a lady or a child. The pump is used in a bucket and is provided with a variety of nozzles for throwing streams of different sizes. It is pointed out that many fires attended with loss of property, could easily be extinguished in the first stages, were there efficient means of applying water at hand, which is supplied by the use of the sprayer. It can also be used for throwing liquid solutions to destroy noxious insects and

bugs of every nature on plant, vine and tree. It is explained that the tallest trees can be sprayed with this pump by using No. 4 tree spray which will throw a spray, fine as mist, that will rest where it falls. It is recommended for use in orchard or vineyard, as it will throw a stream sixty feet or more. The following are the directions for using the sprayer: "To properly fill the pump draw the plunger up slowly, for spraying and showering about one-fourth, and for other purposes one half the length. For extinguishing fires, washing high windows, hiving bees, showering trees, etc., use the straight tube No. 1. For washing carriages, low windows, sprinkling dusty streets, etc., use elbow nozzle No. 2. For general sprinkling and showering on flowers, vines, plants, etc., use the elbow spray No. 3. For showering trees, etc., use straight spray No. 4."

Through the indefatigable efforts of Mr. J. L. Pollitt, London manager of the Bissell Carpet Sweeper Co., the subject of prison made goods has been seriously discussed by the English Parliament, and according to the English Blue Book just published it would seem that the result will doubtless be that goods heretofore made in German prisons, consisting of carpet sweepers, brushes, mats, etc., and placed upon the London market ostensibly as English made goods, will be prohibited.

The Illinois Pure Aluminum Co., Lemont, Ill., have just completed a new addition to their factory, which adds fifty per cent. more floor space and puts them in shape to handle a large volume of trade. The use of aluminum utensils must be on the increase.

The Penn Hardware Co., of Reading, Pa., has application for charter, with the following incorporators: C. R. Heizman, A. A. Heizman, Theodore I. Heisman, I. S. Ermentrout, and Luke E. Fichthorn. Capital stock $415,000.



HARDWARE costs only One Dollar a year.

The Enterprise Meat Choppers.

The Enterprise Mfg. Co. of Pa., Philadelphia, Pa., manufacturers of the celebrated Enterprise Meat Choppers, which are acknowledged to be of the best of the kind on the market, have made a decided improvement in their geared power choppers. Their experience of ten years has demonstrated the necessity for so doing by reason of the following drawbacks: First—Rapid wear of the knives and plates, due to the abuse of the tail screw, and, partially, to the construction of the machine. Second—Heating and rapid wearing of the thrust bearing or tail button against which the end of socket shaft works. Third—Noise, due to the unavoidable imperfection of cast gears. In designing the new machine the above difficulties have been removed, and a number of wearing parts are no longer necessary. By the new construction all flexibility in the frame is removed, and with it the necessity for excessive pressure, heretofore required to keep the knife and plate in contact, even when new and in good condition.

The tail screw which seemed to be a constant temptation to the operator to improperly use for forcing the knife against the plate, has been done away with entirely. As a consequence, the knife and plate, by actual test, last twice as long without sharpening. The heating and wear of the tail button in the old machine was due to the excessive pressure referred to, and partly to the fact that it was too small for its legitimate work. They have substituted for the tail button a thrust collar directly behind the socket shaft. The thrust is here taken by a phosphor bronze washer working against hardened steel faces, the whole constantly flooded with oil. As shown in the illustration, the pulleys, 28 inches in diameter, are placed on the socket shaft, thus obviating all gears and avoiding all noise. Prospective purchasers would do well to look into the merits of this new chopper before buying, as it will undoubtedly be to their interest to do so. All the leading butchers' supply houses sell them. The company will be pleased to mail one of their illustrated catalogues to any who make application.

Sizes of Guns.

Guns have been constructed up to 110 tons, exclusive of fittings, which would bring their weight up to over 160 tons. The projectiles for this piece of ordnance weighed nearly a ton, and cost £150. The powder charge was nearly 1,000 lb., and cost about £65. The projectile leaves the gun with a velocity of 2,000 feet per second, having an energy of about 50,000 foot-tons. Some of these figures have, however, been exceeded, as in the case of the test of the Armstrong 110-ton gun made in 1891, against an armour-plate — made at the Atlas Works, Sheffield — 7 feet square and 20 inches thick. In this case the weight of the armour-piercing projectile used was 1,813 lb., the muzzle velocity was 2,079 feet per second, giving a striking energy of 54,320 foot-tons. The projectile passed through 62 feet of materials, including 20 feet of compound plates, 20 feet of oak backing, 11 feet of granite and masonry, and 11 feet of concrete. The naval powers of the world are now pretty well agreed that ordnance of this size is too heavy and too costly for ordinary use. After less than fifty charges, these guns have to be relined, at enormous expense. The largest guns recently made have been of 13½ inches calibre and 67 tons weight.

Easy Riding Handle.

The Q. & C. Co., whose general offices are at Nos. 703 and 706 Western Union Building, Chicago, are just placing on the market a new Hand-Grip which is herewith illustrated and which promises to mark an important step in the evolution of the bicycle. The most important feature of the rubber tire, which has revolutionized the making of bicycles, is its resilience, and manufacturers of tires in their advertisements and elsewhere always lay great stress upon this quality. It is claimed for the "Q. & C." Hand-Grip, and the company state that the claim seems to be borne out by the testimony of many riders who have tried it, that it entirely does away with the excessive jar to the hand, wrist and forearm caused by passing over obstructions while riding, thereby materially increasing the efficiency of both the wheel and its rider, as well as adding to the comfort of the latter by preventing entirely the strain upon the nervous system caused by the jar of the handles on the ordinary bicycle. The company remark that notwithstanding the resilience of the pneumatic tires now used the jar caused by the wheel passing over obstructions is communicated to the wrist, to the forearm and the shoulder, and if the rider is leaning far forward, as most rapid riders do, to the body itself. It is pointed out that the purpose of the handle, which, as shown in the cut, has attached to it a strong spring, is to take up the motion caused by the oscillation of the wheel. This coiled spring arrests all motion before it reaches the handle, while the handle is so adjusted to the bar that it is inflexible laterally and so rigid vertically as to permit the weight ordinarily placed upon the handle by a rider.

Walter J. Shepard, who was formerly a member of the Shepard Hardware Co., Buffalo, N. Y., has connected himself with the Geo. L. Squier Mfg. Co., of the same city, and has been elected president thereof. His many friends will be glad to meet and greet him in this new and responsible position. The company make a specialty of sugar, coffee and rice machinery.

There are manufactured in the United States 8,000,000 kegs of nails in a year.

Golf sticks and roller skates have been recently made of aluminum.

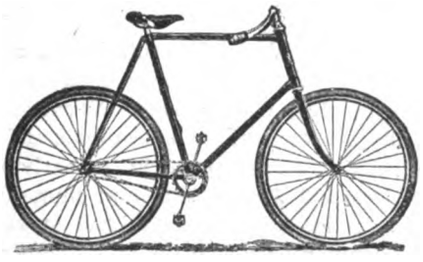
Monarch Models for 1896.



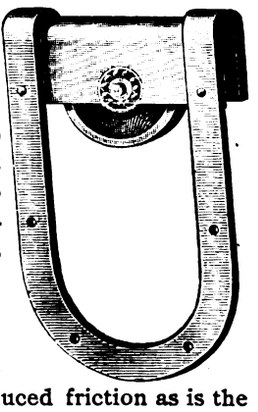
We illustrate herewith two of the Monarch Cycle Mfg. Co.'s models for the season of 1896. The wheels are described as follows: Model 21, Monarch 21-inch double drop frame. Seat mast, upper and lower drop main tubing 1 inch Mannesmann, with rear stays and forks ⅝ inch. Head 9 inch ball bearing, with 1¼ inch tubing. 26 inch wheels. Detachable sprockets, front and rear. Plymouth rims. Humber pattern chain. Monarch patent crank shaft bearings. Detachable, round tapered cranks, 6 inch throw. Width of tread, 5¾ inches. Tubular L seat post, with solid

MODEL 21.

top bar. Cold swaged, double butted steel tangent spokes, tied, with 28 to front and 32 to rear wheel. Monarch rubber pedals. Garford saddle. 62 gear. Monarch raised handle bar, 13-16 inch. Cork handles and white tips. New York 1⅝ inch tires. Weight 22 pounds. Black tool bag, with pump, wrench, screw driver, oil can and repair kit. Finish, handsome black enamel, wlth nickeled parts and spokes. Options—No. 77 Hartford single tube, or Morgan & Wright quick repair tires. Hunt saddle. Weight 22 lbs. Price $80."

Model 40. "Monarch 24-inch Diamond frame. Mannesmann 1⅛ inch tubing for main top, seat, mast and main lower, with ¾ inch tubes for rear forks and stays. 10 inch head, with 1¼ inch tubing. 28 inch wheels. Detachable sprockets, front and rear. Barrel hubs. Built-up wood rims, fitted with nickel plated eyelets in spoke holes and finished in mahogany. Humber pattern chains. Monarch patent crank shaft bearings. Detachable, round, tapered cranks, 6½ inch throw. Width of tread 5⅛ inches. Tubular L seat post, with solid steel top bar. Cold swaged, double

MODEL 40.



butted steel tangent spokes, tied, with 32 to front and 36 to rear wheel. Brandenburg rat-trap pedals. Garford T saddle. Gear 68. Monarch adjustable handle-bar, 13-16 inch. Cork handles and black tips. M. & W. 1⅝ inch quick repair tires. Weight 22 pounds. Black tool bag, with pump, wrench screw-driver, oil can and repair kit. Finish, Brewster green enamel, handsomely striped, with nickeled parts and spokes. Options—New York, Palmer, Dunlop, No. 80 Hartford, single tube tires. Gear, 63, 66½ or 72. Monarch or Brandenburg rubber pedals. Hunt saddle, 22 or 26 inch frame. Weight 22 lbs. Price $100."

Dunlap's Seasonable Goods.

C. W. Dunlap & Co., No. 88 Chambers Street, New York, are placing on the market a large line of Hardware novelties, including garden sets, kitchen knives, tack hammers, ice awls, lemon squeezers, socket ice chisels, ice axes, patent carpet hammers and band ice picks. The garden set includes a hoe, spade, rake, fork, trowel and weeding hook. The blades are made of cast steel, the shanks being made of malleable iron, socket shaped, which, it is remarked, leave no tangs to pull out of the handles. The kitchen knives are made with wooden handles, the blades being of crucible cast steel, carefully hardened in oil, which, it is stated, makes a first class knife. The tack hammers are of the adze eye style, with tinned or nickeled heads. The ice awls have cast steel forged and hardened, slender blades, in different lengths. The lemon squeezers are made from malleable iron, heavily coated with pure tin, and have deep bowls. The socket ice chisels have cast steel blades, hardened and tempered, with handles of different lengths and styles, suitable for fish dealers, ice cream makers and undertakers. The ice axes weigh 2½ pounds each, with 16 inch handles; they are also made with 22 inch axe handles, and are intended for the use of hotels, butchers and ice cream makers. The carpet hammers have forged cast steel claws, and it is pointed out that the process by which the heads are fastened to the handles makes it impossible for them to fly off. The ice picks have tempered cast steel blades with oval points.

Lane Bros. New Hanger.

The accompanying cut shows a new hanger, Lane's Special No. 50, which is about to be introduced to the trade by Lane Brothers, Poughkeepsie, N. Y. The makers claim a combination of the following desirable points, namely U shaped frame, covered Hanger, and anti-friction any distance. The frame is of steel, quite similar in shape to the original Lane Steel Hanger. It has a complete cover, having the two sides bolted together, with sleeve between, which greatly strengthens that part of the Hanger. Inside the wheel and around this sleeve are the steel rollers as shown in the cut. "With this construction there is rolling friction only, and not merely reduced friction as is the case with many so-called long distance anti-friction hangers." The new goods are well recommended, and fully guaranteed by the makers.

The most notable as well as interesting development of business methods that has come into public notice during the past three or four years is to be found in the changed attitude of business concerns toward the advertising question. It is gradually being conceded by the most progressive business men that the advertising question is among the two or three most important ones they have to consider, affecting directly both the volume and the quality of their trade. This attitude has been held for a long time by dealers in specialties, such as patent medicines, but it has not been regarded as essential to success in retail trade until within a comparatively recent period.—*Newspaperdom.*

The Diamond Machine Co., Providence. R. I., have just perfected a new and improved machine for grinding cotton mill spindles from the forging. The machine i a combination of their Universal and knife grinders, with the necessary attachments for grinding the spindles to the proper taper. The machine is said to give perfect satisfaction, and, although but recently completed, orders have been placed by several manufacturers of spindles.

A well-known Elmira undertaker has an advertising device which is at least suggestive. The undertaker is presenting his friends with a celluloid pincushion made in the shape of a heart, the front of which is adorned with an excellent likeness of himself, and bears these fateful words: "When your heart stops beating send for me."—*Elmira (N. Y.) Gazette.*

RECENT TRADE PUBLICATIONS.

The Fenton Metallic Mfg. Co., Jamestown, N. Y., are sending out an elegant catalogue describing their wheels. The front cover represents a fair rider, mounted on a Fenton, wheeling along a winding road. The coloring is a combination of blue, white and gold, and has a very pretty effect. The back cover bears the company's well-known trade mark on a back ground of gold. The company's greeting is as follows:

Wise is the man who careful heeds
The thing he sees, the book he reads;
And then applies them to his needs,
As the occasion fits.

"Wisdom," says an old proverb, "may not be fully learned from one book." "Therefore it is that we add again our mite to the accumulation of bicycle lore. And, though we cannot boast of being the oldest, nor yet the largest, cycle manufacturing firm in the world, we may, with honest pride and perfect truth, assert that we have been building bicycles for four years, and that we have builded honestly and well. The art has received from us some original ideas which older and larger establishments failed to devise, though, sooth to say, they were ready enough to adopt when once taught the lesson. Our plant is large enough to build all the bicycles we can sell, and we have ample capital to conduct as large a business as we can build up. By this we want you to understand that Fenton bicycles are not made for quantity, but for quality. Hence, though we might easily turn out a much larger number of bicycles if we adopted other and more usual methods, it would be to the detriment of a standard of workmanship which we in no way propose to sacrifice. By the fulfillment of this policy our output is much smaller than it might be, but every bicycle we make is a Fenton. It is recorded that a sow with a large family at her side once taunted a lioness because she brought forth only one offspring. 'True,' replied the royal beast, 'but that one is a lion.'"

We have at hand catalogue "B" issued by L. Boardman & Son, East Haddam, Conn. On page 2 of the catalogue is an engraving of the company's works at East Haddam. The company say: "All goods of our manufacture, which bear our name, are warranted to be equal, if not superior, to the generality of such class of wares offered in market. We use nothing but the best grades of metal for their base. Our silver-plated table ware is heavily plated on all parts alike with pure silver, on the finest quality of nickel silver, and hand burnished. These goods are carefully weighed before and after depositing the silver thereon, insuring us no hesitation in warranting the full amount of silver on the goods as represented. Our 'Standard Plate' is stamped: Table spoons and medium forks, L. Boardman & Son, A. 1. 4.* Dessert spoons and forks, L. Boardman & Son, A. 1. 3.* Tea spoons, L. Boardman & Son, A. 1. 2.* Our 'Double Plate' is stamped: Table spoons and medium forks, L. Boardman & Son, A. 1. 8.* Dessert spoons and forks, L. Boardman & Son, A. 1. 6.* Tea spoons, L. Boardman & Son, A. 1. 4.* Our 'Triple Plate' is stamped: Table spoons and medium forks, L. Boardman & Son, A. 1. 12.* Dessert spoons and forks, L. Boardman & Son, A. 1. 9.* Tea spoons, L. Boardman & Son, A. 1. 6.* Our nickel silver table ware (without plate) are not light weight goods, made from poor quality metal and sold as German silver. We guarantee these goods to be solid and uniform quality throughout, with no coatings to wear through or flake off, and with no liability to rust. Our Britannia spoons contain no lead, and cannot be excelled in quality, strength of metal, or finish. We feel confident that we can supply to the trade superior goods at satisfactory rates." The catalogue contains innumerable illustrations as well as the prices of the productions of the company.

The Crawford Mfg. Co., Hagerstown, Md., have gotten out a neat catalogue relative to their line of bicycles for 1896. The company will carry eight models ranging in price from $40 to $75. The company remark that all Crawford cycles are finished in the best possible manner, great care being used in preparing all parts before the application of either nickel or enamel. The hubs, cranks, pedals and spokes, and other small parts are heavily nickel-plated on copper. The enameling is done in a most thorough manner. The following are the specifications for their model No. 29, $75, gentlemen's wheel: Frame—Improved diamond pattern; Mannesmann steel tubing throughout; upper and lower reach and upright, 1⅛-inch, 22 gauge; rear fork, ¾-inch, 20 gauge; rear braces, ⅝-inch, 22 gauge; sheet metal head connections; barrel bracket and seat-lug drop forged. Wheels—28-inch; fitted with best Hartford single tube, M. & W. Quick-repair, G. & J., or Dunlop tires. Spokes—Tangent; standard swaged; 15 gauge; nickel-plated. Hubs—Barrel-turned from steel bar, and detachable sprocket. Rims—Laminated wood. Brake—Direct-plunger pattern; fitted with noiseless cone-adjustments and detachable handle-bar clip. Bearings—Ball throughout; positively oil-retaining and dust-proof. Head—10-inch ball bearing, with hardened steel cones cut from the bar. Handle-bar—⅞-inch weldless steel tubing, 18 gauge; either drop or raised pattern; 18 inches wide. Chain—¼-inch Indianapolis, hardened throughout. Chain-adjustment—Rear, with set-screws. Front fork—Seamless, including crown tubing, with sheet-metal crown nickel-plated. Cranks—Drop-forged and hardened; round, 6½-inch. Gear—Optional: 60 to 72. Pedals—Crawford pattern, either rat-trap or rubber. Saddle—Gilliam, Hunt, or Garford, at our option. Wheel-base—44-inch. Weight—22½ pounds.

The Detroit Stove Works, Detroit, Mich., and Chicago, under the title of "Detroit Jewels," issue a handsome catalogue on Detroit Jewel Gas Stoves. Views of the works at Detroit, the Western offices, salesrooms and warehouse, and of the Buffalo agents, appear in the early pages of the catalogue. Detailed descriptions and numerous illustrations of the large line of gas ranges and stoves manufactured by the company are also given. The company say: "We have a reputation to maintain and cannot afford to put out any stove bearing our name and mark which cannot be fully guaranteed for operation and endurance. Our aim will be to please our customers, and in our works we have unequaled facilities for turning out fine stoves, almost unlimited in quantity, and the reputation of Detroit stoves is in itself an assurance that anything we produce will be excelled by none. We possess great advantages over other gas stove manufacturers in that we have our own complete pattern shop, and that we make all our own castings and are not compelled to accept inferior work from outsiders. The Jewel line is thoroughly advertised, and every stove sold is satisfactory to the user, therefore stoves bearing the Jewel trade mark are easy to sell. An ample supply of advertising matter will be furnished our customers for distribution."

The Monarch Cycle Mfg. Co., Lake, Halsted and Fulton Streets, Chicago, have published an artistic catalogue of their 1896 line of wheels. The fourth page is devoted to a handsome illustration of the company's huge plant. Scattered profusely through the pages of this book are little

Digitized by Google

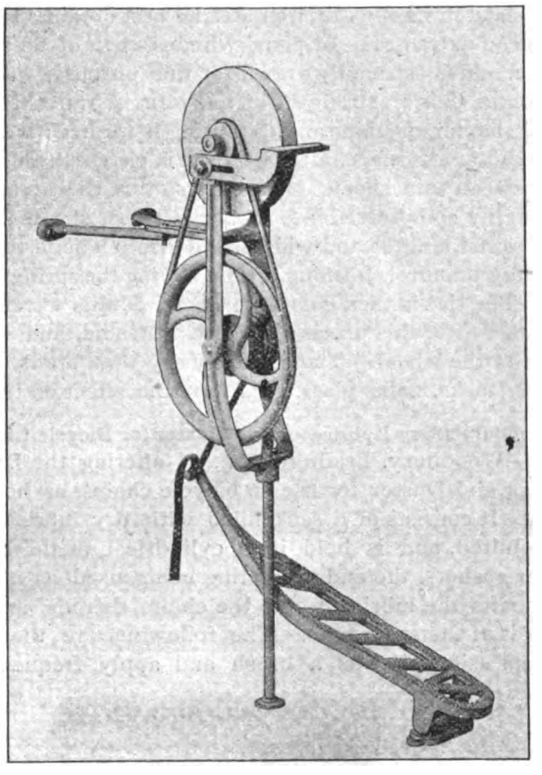
views showing the Monarch put to many different uses. One shows a cowboy of the woolly West lassoing a steer, while mounted on his trusty wheel; another shows a soldier fighting on his silent steed, and a third shows a fin-de-siecle elopement on the bicycle. The company say: "Monarch bicycles need no introduction. They are well and favorably known in every civilized country on the globe. While we are not the oldest makers, we have most successfully passed through all the experimental stages of an infant industry, and have established a trade and reputation for our production second to that of no other maker, not only in America, but in the world. We have from the first endeavored to make Monarchs as good as it was possible for the trinity of mechanical skill, capital and energy to produce. We have always bought the best material, regardless of cost, and have employed the most scientific method of construction. As a consequence, Monarchs have been accepted from the beginning as bicycles of the highest grade, embodying advanced ideas, and have universally withstood the unfailing test of actual service. The demand for them has increased at a phenomenal rate, extending not only throughout America, but to every land in which bicycles are used. This remarkable growth, we believe, is generally recognized as without a parallel in the trade, and we take it as a reasonable endorsement of the quality of Monarchs."

The Monarch Stove Co., Mansfield, Ohio, and St. Paul, Minn., have issued their illustrated catalogue F, of Monarch vapor and gas ranges and stoves The cover is finished in tawn, through which runs an artistic design in yellow chrysanthemums. In the lower right hand part of the front cover is the well-known trade mark of the company, while in the upper left hand cover a burning torch is represented. The company, under the caption, "Comfort in Cooking," say: "These words afford food for reflection. Their connection with Monarch vapor and gas stoves serve to call attention to the line, and if we can get you, Mr. Stove Dealer, to read and reflect upon the matter shown on the following pages, we will have demonstrated to you not only that 'comfort in cooking' can best be secured by using a Monarch, but that your own business will be rendered more profitable by your becoming thoroughly imbued with this idea, and Monarch vapor and gas stoves will become a 'household word' in your community. You want to build for the future, and secure the best returns for your labor. Will attractive designs, novelty of features, perfection in mechanical construction and satisfaction in operation bring this? Order samples and subject them to the most severe test and comparison, and await results." The illustrations cover a large line of vapor and gas ranges and stoves.

The Bigelow & Dowse Co., No. 229 Franklin Street, Boston, Mass, have issued two catalogues for 1896. One is devoted to Hardware, and illustrates and describes a variety of articles, including sleigh bells, spring hinges for screen doors, screen doors, window screens, hoes, garden rakes, forks, oil stones, ice cream freezers and lawn mowers. The other is a catalogue of bicycle sundries. The company say: "Recognizing the necessity of a full and complete assortment of bicycle sundries as a profitable and necessary addition to every Hardware dealer's stock, we have made a special effort to meet that demand both in variety and price. It has been our aim to have nothing in our list that is not 'up to date' and thoroughly reliable." The line of sundries carried by the company is a large one.

The Trenton Watch Co., Trenton, N. J., offer some interesting facts in reference to their cyclometers, in the shape of a booklet. The front cover is taken up with the trade mark of the company and the back cover is filled by a picture of the company's factory at Trenton. The company say that the mechanical facilities of the Trenton Watch Co. for producing perfect instruments in large quantities are unsurpassed, having all of the advantages of a large watch factory, fully equipped with automatic machinery and all kinds of labor-saving devices. The catalogue contains illustrations of the Trenton cyclometers and the Trenton chronograph.

The McIntosh-Huntington Co., Cleveland, Ohio, have gotten out a most comprehensive spring catalogue for 1896. The goods carried by the company embrace steel goods, hay tools, hay carriers, seeders, pruning shears, horse clippers, rubber hose, hydrants, filters, refrigerators, ice cream freezers, poultry netting, screen doors, spring hinges, circular saws, milk cans, hammocks, Warner locks, Riverside Tool Co.'s hammers, sewing machines, lawn mowers, etc., etc. The company's line of bicycles, including the Sunol, Hercules, Stella, American King and Queen of Scorchers, are well known.



The March calendar card of the Joseph Dixon Crucible Co. very graphically shows the month bounding in as a roaring lion, and being led out like Mary's lamb. This sentiment from Bryant adorns it:

> The stormy March has come at last,
> With winds, and clouds, and changing skies.

The Boston Belting Co., Boston and New York, are sending their friends a handsome little pocket memorandum book, bound in morocco, with gold lettering. Besides many blank pages for note taking, it contains lists of sizes and prices of rubber belting, hose and other goods made by them.

Buffalo Foot Power Grinder.

S. C. Rogers & Co., Buffalo, N. Y., are offering the Foot Power Grinder herewith illustrated. It is designed for

use in jobbing shops, blacksmith shops, butcher shops, hotels and restaurants. The makers state that 3,000 revolutions per minute may be obtained on this grinder. It may be fastened to the wall, post or bench. The wheel is of solid emery, six inches in diameter. The price of the machine is $5.

The Shipman Hardware Co., of Manawa, Wis, has been incorporated by D. W., H. E. and K. W. Shipman, J. Niven and W. N. Hart. Capital stock $5,000.

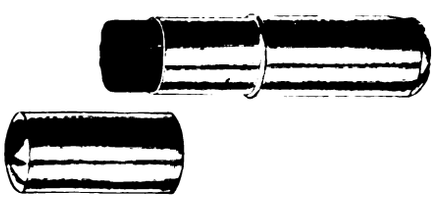
ILLUSTRATED BICYCLE NOVELTIES.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

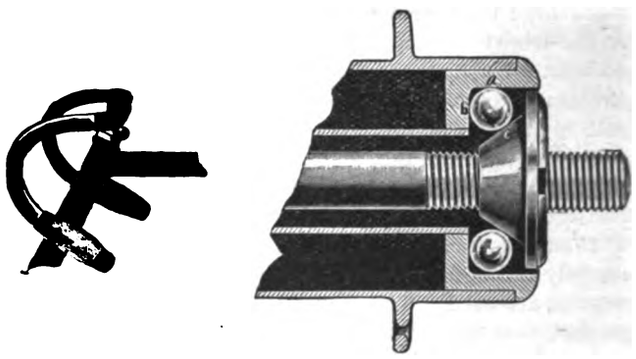
The Beebe Bicycle Tire.



The Beebe Tire Mfg. Co., Sandusky, Ohio, are offering the Beebe Bicycle Tire, as herewith shown. It is a single tube hose pipe tire, complete in itself, being made so by a net work of springs vulcanized with rubber, which gives to

it the proper resisting force for ordinary riding. It is explained that air should be used as an auxiliary to aid the springs to make them the longer serviceable, and by which one can regulate the elasticity to suit his weight and wishes. It is remarked that the combination of rubber, wire and fabric used in its construction are the best obtainable. The wire is an extra grade of piano wire 028-1000 of an inch in calibre, and is especially drawn for this purpose, having a 250 pound tensile strength. The wire is run through a spring shaping machine and the spring is formed; it is then hardened in a furnace, after which it is passed through rollers between thin sheets of rubber so that the springs are thoroughly compressed into rubber. These sheets are cut into desired lengths and widths, and firmly wound together on a long mandrel, forming a tube having the springs interlaid. The tire is then complete in all details except vulcanizing; after this process the tire is tested, and is then ready for the wheel. The company say that brads, basket staples, tacks, nails, glass, etc., have no effect on the tire.

Woodbury's Dry Lubricator and Duster for Bicycle Chains.



S. S. Woodbury, Bradford, Pa., is offering the Dry Lubricator and Duster for use on bicycle chains, as herewith given. It consists of a sack filled with dry lubricant and then quilted, and is held in a cylindrical metal box by rubber gaskets, the end projecting being used as a brush which sifts the lubricant onto the chain, dusting and polishing it at the same time. The following are the directions for using: Use as a brush and apply frequently to

wearing surface of chain, only when free from oil or other sticky matter. Oil may be used for inside joints of chain if wiped thoroughly dry before applying this, otherwise the felt will become clogged so lubricant will not sift. Dip the chain in kerosene oil occasionally to clean, then oil, etc., as above. The result will be a very clean, smooth, still and easy running chain. Must be used several times before getting full benefit.

Gendron Wheel Features.

The line of wheels carried by the Gendron Wheel Co., Toledo, Ohio, include the Gendron and Reliance Wheels, also a twenty-four-inch juvenile wheel. The accompanying cuts show their style "G" handle bar and bearings.

The manufacturers state that their frame construction and their manner of making joints, peculiarly their own, have commanded a special interest. It is explained that the connections are made without either forgings or sheet stampings, but with heavy weldless tubing, which, at a low heat, is shaped to wrap entirely around the part to which it is brazed, the upper and lower tube and seat post column tube, telescoping over the connecting tubes. The claim they make for rigidity is based on their manner of frame construction. The company further state that they take especial pains in proving their well-known claim for accurately true bearings, explaining their process of grinding cups, cones and face nuts accurately true from their thread. But their claim for perfection in bearings is not wholly due to accurately gronnd cones and cups. They assert that the correct pitch of their cones has much to do with the easy running of Gendron bicycles. A ball has three points of bearing—A, B and C—and it will be seen that at A it travels a larger circle than at B or C, therefore the outside of the ball travels faster than at the points B or C, hence the pitch of the cone must be on one certain degree to bring the point of contact C with the ball at the proper line in order to prevent the ball from having a screwing motion as it rolls around the bearing, thus reducing friction to the utmost minimum. The pitch of the cones in Gendron bicycles varies in accordance with the size of the balls and the diameter of the cups, but all, it is stated, mathematically correct.

Bicycle Locks.

The Slaymaker-Barry Co., Lancaster, Pa., for whom John H. Graham & Co., No. 113 Chambers Street, New

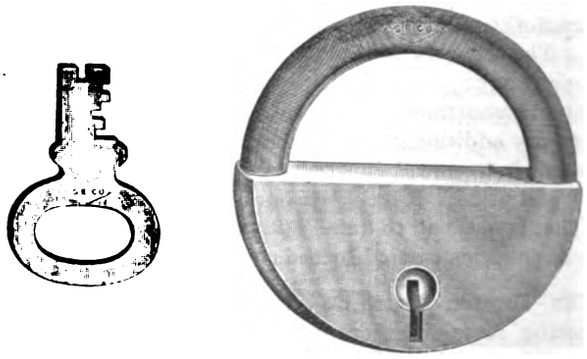


FIG. 1.—NO. 730.

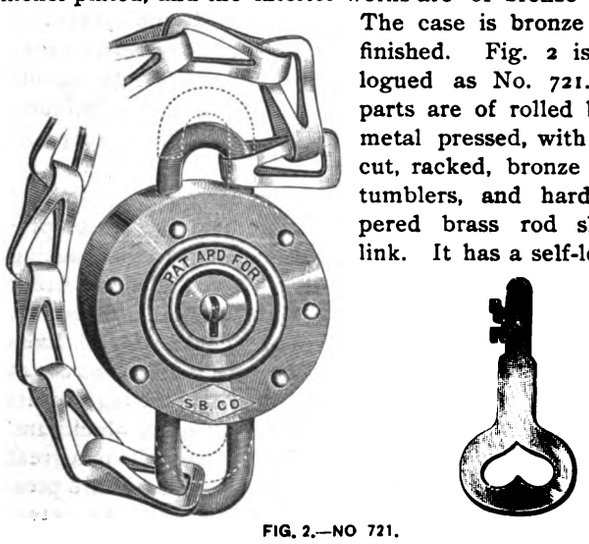
York, are sole sales agents, are offering the two Bicycle Locks shown here. Fig. 1 is their No. 730 sprocket lock.

Digitized by Google

It has a self-locking spring and nickel-plated steel spring shackle. It is provided with two flat milled steel keys, nickel-plated, and the interior works are of bronze metal. The case is bronze metal finished. Fig. 2 is catalogued as No. 721. All parts are of rolled bronze metal pressed, with three cut, racked, bronze metal tumblers, and hard tempered brass rod shackle link. It has a self-locking



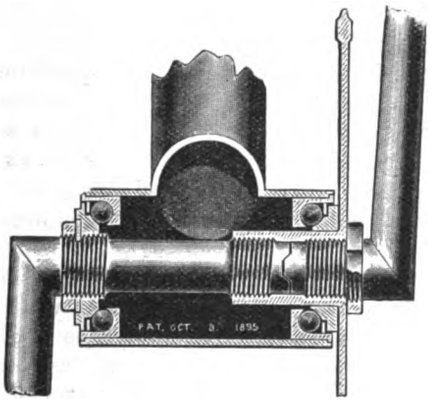


FIG. 2.—NO 721.

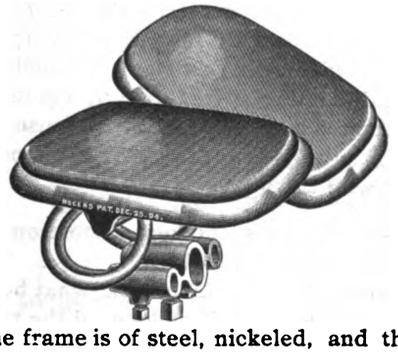
spring and is spring-opening, with phosphor bronze springs. It has two nickel-plated rolled steel keys, cut and milled. and a 13-inch nickel-plated cut steel chain. Finished in rolled bronze metal.

The Cullman Crank Shaft.



The Cullman Wheel Co., No. 554 Larrabee Street, Chicago, in constructing their 1896 line of wheels, are using the Crank Shaft herewith shown. The axle is joined by

dovetailing together in the center of the sleeve by two leads of thread on the axle, both pitched in the same direction, one lead working twice as fast as the other. It is explained that the strain on the shaft from the cranks tends to keep all parts tight. A lock nut placed on the outside of the sprocket prevents it from becoming unscrewed by back pedalling.

Rogers' Perfect Health Bicycle Seat.

The Rogers Saddle Co., Nos. 14 and 15 Tremont Row, Boston, Mass., are introducing the Bicycle Saddle shown here. The seat is divided in halves, each part acting separately, and automatically following the movements of the

thighs. The frame is of steel, nickeled, and the seat is a felt cushion covered with soft and pliable calf skin. Further ease is secured by two sets of springs—the coils in which the hangers are secured and the tempered steel bar on which the seat rests. The makers remark that the saddle involves a new and important departure from the pommel or horn style of saddle, which has been condemned by physicians, and that it affords a comfortable seat, enabling the rider to sit as nature intended, resting firmly upon the bones of the pelvis instead of the perinæum. The saddle, it is stated, fits any style of wheel.

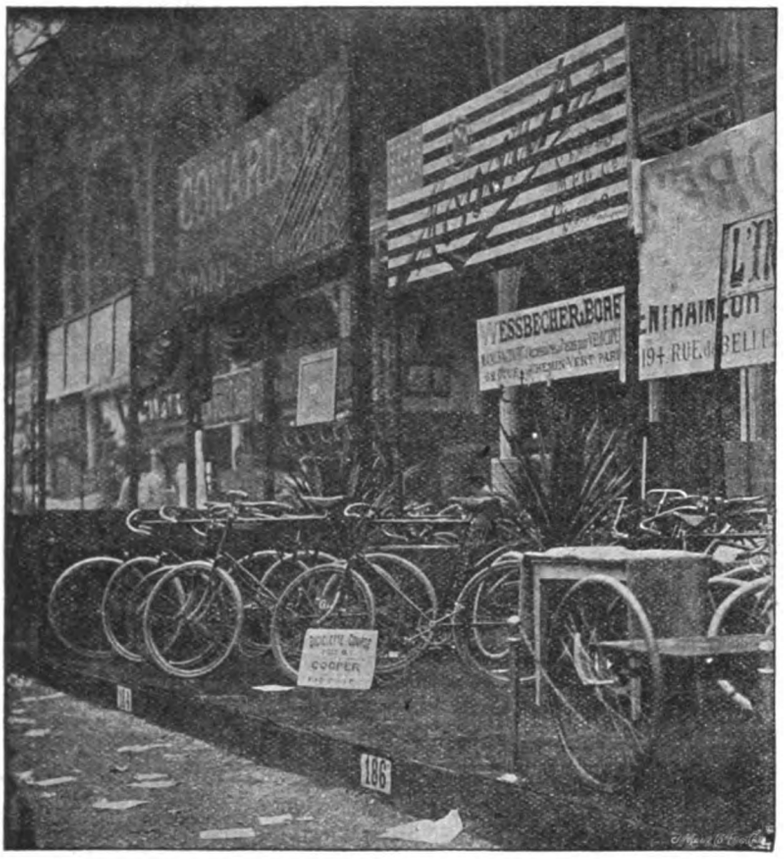
The Syracuse Racing Team.

The Syracuse Cycle Co., Syracuse, N. Y., send us some interesting information for cyclists. They say: "The most wonderful cycling performance of the year stands to the credit of the Sycamore riders at Coronado, Cal. Four world's records in one afternoon (March 2nd) is a performance that no other wheel has ever had the privilege of recording. More especially as three are reduced by one man, and include the world's mile, paced with flying start, which is, unquestionably, the most coveted of the whole table. It is a remarkable fact that the two-thirds of a mile was clipped almost eleven seconds, and ridden in time that but few riders can cover a half in. Our racing team has now disbanded, having reduced 18 world's and 21 Pacific Coast records, a series of performances that, in this age of low marks, reflects great credit upon our riders, David G. Shafer, manager of the Syracuse racing team, Morgan & Wright's 'good tires,' which have been used exclusively, with the exception of one trial; and last but not least, the speed qualities of the Crimson Syracuse bicycle. We append herewith records broken on March 2nd":

1-mile paced,	1:39 1-5;	former record,	1:40 3-5.
⅔-mile "	:58 3-5;	" "	1:09 2-5.
½-mile unpaced,	:33 2-5;	" "	:36 1-5.
½-mile "	:53 4-5;	" "	:55 3-5.

Firm Changes.

The copartnership heretofore existing between John F. Annable and Edwin L. Haley, under the style Edwin L. Haley & Co., as dealers in iron, steel and heavy Hardware at No. 185 Fort Hill Square, Boston, Mass., has been recently dissolved by mutual consent. Edwin L. Haley is alone authorized to receive payments of outstanding accounts, and will settle all outstanding indebtedness of said firm. Mr. Haley has formed a copartnership with Mr. Brennan for the purpose of carrying on a manufacturing, jobbing and commission business in mill, contractors', railroad and blacksmiths' supplies. The business will be conducted at the old stand, No. 185 Fort Hill Square. Mr. Brennan will make bolt and construction work a specialty, his previous connection with the American Bolt Co., as president and general manager, having given him experience in this line. Haley, Brennan & Co. are the New England representatives for the following concerns: Phœnix Horse Shoe Co., Poughkeepsie: Columbia Spring Co., Pittsburg; Liggett Spring & Axle Co., Pittsburg: James McKay & Co., Pittsburg; Columbus Bolt Works, Columbus; Lebanon Rolling Mills, Lebanon, Pa.; Vaughn & Bushnell Mfg. Co., Chicago; Cincinnati Screw & Tap Co., Cincinnati; New Process Nail Co., Torrington, Conn.; Omniform Mfg. Co., New Brunswick, N. J.; Fisher & Norris, Trenton, N. J., and the Standard Toe Calk Co., Boston.



Our Files in England.

A retail Hardware dealer in England says that 90 per cent of the files he sells come not from Sheffield, but from America, and he explains the anomaly in the *Ironmonger*. The American manufacturers, it seems, keep large stocks in London and fill orders with great promptness. The American price lists give exact information regarding sizes and grades and promise delivery in three days from London. A Sheffield price list requires prolonged study to comprehend it, and when an order is sent to Sheffield it may not be filled for four weeks or even eight weeks. This tardiness in filling orders, the writer says, has been a matter of weekly experience for the past twenty years.

Monarch Exhibit at Paris Cycle Show.

Of the Monarch Cycle Mfg. Co., Chicago, exhibit at the Paris Cycle Show, the *Veloce-Sport et Bicyclette Reunis* says: "The American Monarch bicycle is a very remarkable one. There is something attractive about the stand where this machine is exhibited. It is the machine which the celebrated American, Cooper, rode last season, and won 65 prizes in four months—39 first, 18 seconds and 8 thirds. It weighs 18 pounds. It is our old, well-known sportsman, Girardin, who is representing the Monarch in France, and

who shows us four models—two gents' and two ladies'—weighing about 22 pounds each." Their exhibit at that great exhibit is here reproduced.

The Future of Aluminum.

Aluminum in its commercial form is now so much in evidence, and so many glowing accounts are published of its adaptability to an infinity of purposes that it would be well to pause for a moment and to consider to what extent limitations are placed upon the indiscriminate adoption of this metal. The following article is a translation of the original of Herr Karl Barth which appeared in the columns of the *Montan Zeitung*, and while it may possibly err on the other side it is still not without its lesson for those who ar. at present somewhat too hopeful as regards the future of aluminum as a universally adaptable metal:—

The question of the cheap production of aluminum has, writes Herr Barth, been solved a long time ago. There is much inducement in the task of making serviceable for various purposes a metal which can be had cheap in an absolutely pure condition, especially as it is remarkable for its lightness, beauty of color, and its capacity for being polished, hammered, and drawn out. Thus we see utensils made for eating and drinking purposes, vessels for laboratories, surgical and optical instruments, and art uses it for diverse objects. It has been made serviceable in electricity, as it is a much better conductor than iron, and, by alloying, it is hoped aluminum, bronze, and also copper alloy will replace with advantage steel in firearms. Owing to its light weight this metal has likewise made its way into all branches of industry. Even horseshoes are already made of this metal, and as this kind of shoeing takes the form of the hoof, it is more comfortable. It cannot be doubted that aluminum is preferred to every other material for a great many objects, but such vast use and employment of aluminum in the future as may hold out a prospect of an aluminum age is hardly to be expected. Many experiments have proved the small power of resistance of aluminum, so that its use seems to be excluded from whole groups of objects.

It must also be rejected for things that come in contact with boiling water. This fact, therefore, prohibits its use for alumnum cans for the packing of preserved provisions, as the cans would suffer during the sterilization by boiling, and, therefore, the aluminum would affect the provisions. Even if sterilization takes place before filling, or not at all, there is always the danger that the ingredients of the preparation may dissolve the aluminum. That this is really the case, and prevails in a great degree, especially where inorganic acids are present, has been proved in many cases. An extensive use of aluminum has been planned in the equipment of troops, and the use of aluminum for the metal parts of the uniform and equipment, would mean an inestimable lightening of the burdens the soldier has to carry. Soldiers' flasks made of aluminum are very remarkable for their lightness and their unbreakableness. The desirability of their introduction into the army, however, might be questioned by the fact that the liquids destined to fill them would dissolve the aluminum. A small quantity of acetic acid, citric acid, and tartaric acid has a considerable action upon it, and infusions of tea and coffee absorb a great quantity of the metal. Tannic acid is also a great solvent. Although provisions may not be affected in their taste by aluminum, yet a constant contact with the metal, even in small quantities, ought to be avoided.

Further, aluminum cannot be used for objects which are cleaned or come into contact with soda and soap, as these bodies are by no means indifferent to this metal. In ship-building, likewise, the use of aluminum will not obtain that high importance at first supposed. Men-of-war will not be able to use much aluminum, as it scarcely offers a sufficient galvanic resistance. Aluminum does not seem to be destined to play a great part in surgery. The most common antiseptic must not come in contact with aluminum instruments, as already carbolic acid, salicylic acid and boracic acid affect the aluminum. Far from wishing to disparage this metal it must yet be acknowledged from the above statements that the importance at first expected from aluminum in commerce has not been realized.

The Berlin Iron Bridge Co., East Berlin, Conn., have just completed for the Citizens' Gas Co., Bridgeport, Conn., two large buildings, one 63 feet wide by 171 feet long, comprising a purifier house, a meter house and valve house, and the second building 44 feet wide by 122 feet long, comprising a generator house, a scrubber house and engine room. The side walls are of brick, and the roof trusses of steel covered with corrugated iron.

To one of two brothers who kept a store on Main Street, an old employee came last night.

"If your brother doesn't take back what he said to me yesterday I'm going to quit," announced the man with dignity.

"What did he say?" asked the other brother.

"He said that the firm wouldn't require my services any longer."—*Buffalo Express.*

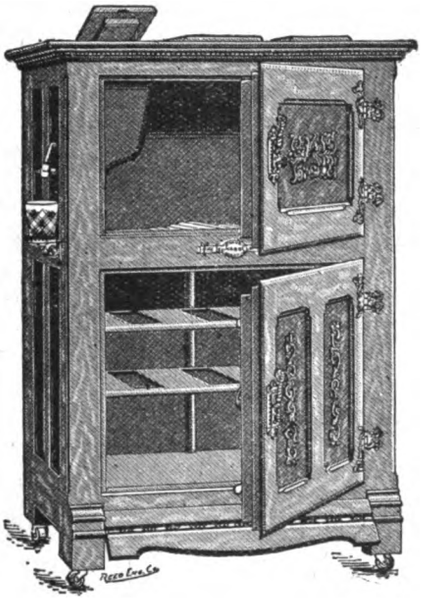
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.

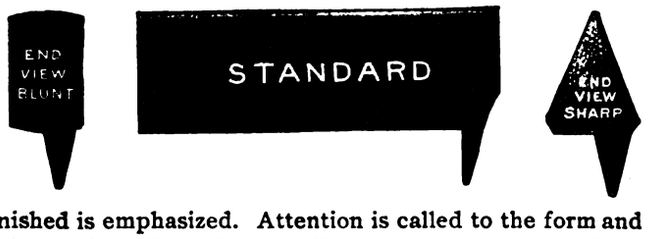


NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

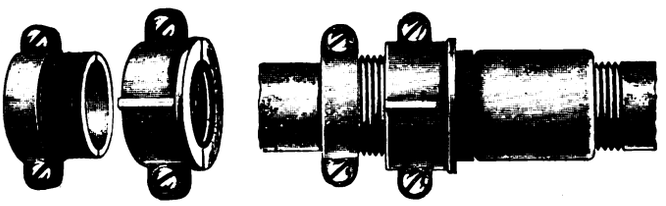
Leonard Cleanable Refrigerators.



The Grand Rapids Refrigerator Co., Grand Rapids, Mich., are offering the new style Refrigerator shown here. The manufacturers remark that these refrigerators differ from

those now on the market in having a large opening to the ice chamber. They are designed especially for artificial ice, which usually comes in cakes 14 inches thick, which makes it almost impossible to get it into an ordinary refrigerator without chopping the ice and causing more or less waste. The opening to the ice door is 14½ inches high by 24 inches long, and the ice chamber is 15½ inches deep. It is explained that these refrigerators will also be found useful for those who desire to cool bottled goods on ice, as usually there is not room enough in the ice chamber for this purpose. The company guarantee that the refrigerators are packed with mineral wool and have eight walls for insulation.

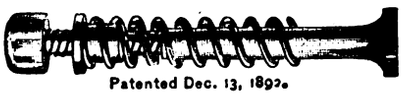
Standard Toe Calks.



The accompanying illustrations represent a line of Toe Calks manufactured by the Franklin Steel Works, No. 447 Dorchester Avenue, Boston, for whom J. C. McCarty & Co., No. 87 Chambers Street, New York, are agents. They are made on the company's patented machinery from Gautier's cast steel, manufactured especially for this purpose, and the fact that they are hot forged and hammer

finished is emphasized. Attention is called to the form and finish of the calk, and especially to the fact that the nib is centered, so that it is not liable to break the shoe in driving. Each number of the calks is made in two lengths, mediums and long. They are made in sizes ranging from 1 to 7, as follows: No. 1, length 1½ inches, ½x5-16; No. 2, 1¾ inches, 9-16x⅜; No. 3, 2 inches, ⅝x⅜; No. 4, 2¼ inches, ⅝x7-16; No. 5, 2½ inches, ¾x½; No. 6, 2¾ inches, ⅞x½; No. 7, 3 inches, ⅞x½.

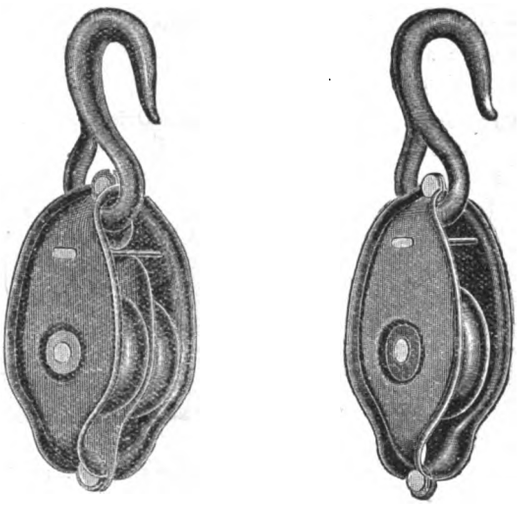
Vanderman's Leak Stopper.



The Vanderman Plumbing & Heating Co., Willimantic, Conn., are offering the Leak Stopper shown here. The device consists of two parts, both of which are made to fasten securely around the pipe by means of set screws.

One of the parts is threaded on the outside and the other is tapered with a thread to match, so that after the thread part is fastened to the pipe close to the leak the second part is fastened to it. Then after a compress is made of asbestos or candle wicking saturated with white or red lead or oil and wound around the pipe, it is a simple matter to force the compress against the leaky joint by unscrewing the outer part, which forces it up against the compress and tight against the leaky part. The device is designed for stopping leaks in steam, water or gas pipes when the leak results from a bad thread in the fitting or on the pipe.

Motley's Adjustable Sash Holder.



The accompanying cut represents an Adjustable Sash Holder offered by Peter Motley, No. 730 Broad Street, Philadelphia. It is designed for holding window sash,

screens, etc., in any position desired, and can be applied to old or new screens. It is made in different sizes, adjustable to any pressure, works automatically and affords greatest security.

The Eddy Tackle Blocks.

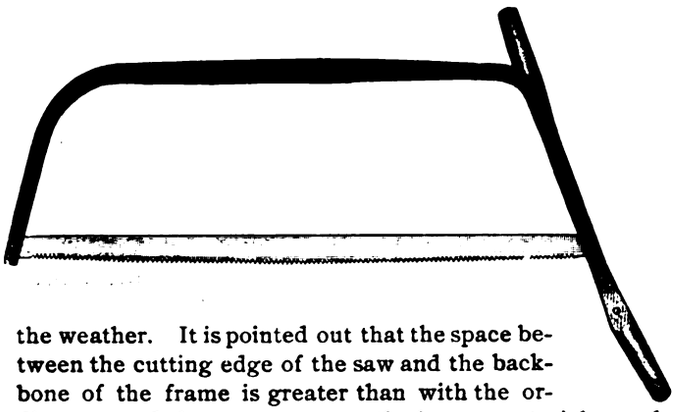
H. D. Edwards & Co., Detroit, Mich., are offering the Eddy Tackle Blocks as represented here. They have forged steel shells with edges rounded out, fitted with steel pins and hooks of the best quality hook iron. The manufacturers state that the blocks are neat in appearance, much lighter than wood blocks, that each one has a becket

so that Hardware merchants do not have to bother about that point in arranging their stock, that each size of block has been subjected to a high test, proving in every instance that they were stronger than the hooks used in them, and

Digitized by Google

that the blocks are designed to fill the demand for a low-priced, light weight, strong, durable block.

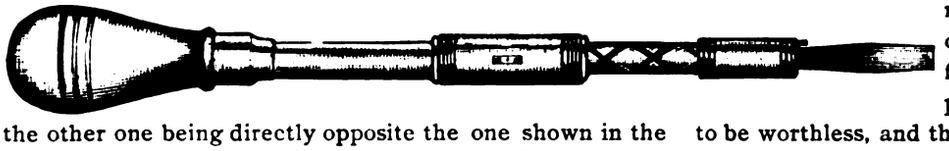
The Brighton Wire Fence Tightener and Holder.



This Wire Fence Tightener and Holder is offered by the Logan & Strobridge Iron Co., New Brighton, Pa. The tightener and holder are made in gray iron, also tinned,

and may be put on the face of the post or on the side, drawing the wire around the corner. To tighten or slacken the tension on the wire an ordinary wrench is used, and the ratchet spool can be locked fast by driving a small nail through one of the nail holes in it. The tightener is designed for use on all kinds of fences, and may be used on woven wire or picket fences to prevent any appearance of bagging. The manufacturers state that the use of the tightener will cost the fence builder about 25 to 30 cents per fifty rods of fence.

The Stover Spring Saw Frame.



The cut shown here represents a Spring Saw Frame, put on the market by the Stover Novelty Works, Freeport, Ill. It is made of spring steel and the handles are of metal, so that the frame will not warp out of shape or be affected by

the weather. It is pointed out that the space between the cutting edge of the saw and the backbone of the frame is greater than with the ordinary wood frame, consequently larger material can be sawed; also that the frame being made of two strips, which are spread in order to brace it, makes it a very light and stiff frame and is not liable to break if laid down and a weight is thrown on it.

The Forest City Screw Driver and Drill Combination.

The Forest City Screw Driver & Drill Co., Nos. 468 and 470 Fore Street, Portland, Me., are offering the Screw Driver and Drill Combination as shown by the accompanying cut. The tool has a double spiral thread cut on the spindle and is provided with a loose sleeve between the lower end of the spindle and the screw driver bit. It also has two shippers in the cylinder immediately above the spindle,

the other one being directly opposite the one shown in the cut. The shippers work in connection with the spirals in such a manner as to permit of the following results being obtained at will, by pushing the shippers backward or forward: A driver to push a screw in; a driver to push a screw out; a driver that will make an automatic drill; a driver that will ratchet a screw in and out; a driver that is a ratchet wherever the operator may catch the spindle, and a driver that is stationary at long and short range. In operation the loose sleeve is held between the thumb and fingers of the left hand, while the handle is grasped in the right hand. When used with bits, the shank of the bit is held by a spring catch, to remove which the thumb is slipped easily down over the spring, pulling on the bit at the same time, thus disengaging it from the tool.

The "Handly" Fire Extinguisher.

The cuts herewith relate to the "Handly" Fire Extinguisher, offered by the Pittsburg Fire Extinguisher Co., Pittsburg, Pa. It is designed for use in stores, dwellings, factories, printing offices, buildings, hotels, warehouses, stables, etc. In the extinguisher a bottle of acid is sealed, with a thin mica covering. It is explained that when the extinguisher is picked up, the handle being pivoted below the centre of gravity, the cylinder turns upside down, and the bottle of acid held in the cage drops by gravity on the spiral barb, fastened to the cap, breaking the seal and thus allowing the acid in the bottle to come in contact with the

FIG. 1.

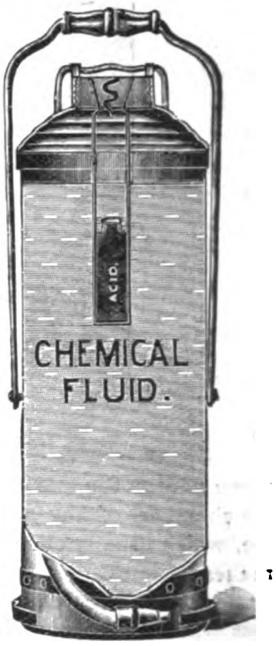


FIG. 2.

solution in the cylinder, and by these means generating the extinguishing gas. It is stated that the "Handly" is constructed with a view of standing for a long time in good condition. "It will not get out of order, nor the fluid deteriorate, although the machines may remain unused for many years; that the chemical fluid is a neutral liquid, that it generates a gas only when it comes in contact with the acid in the sealed bottle at the time that the extinguishing power is needed to subdue a fire; that they do not flood with water, which is so disastrous to seasoned woods and all kinds of manufactured stock, but extinguish fires by a projected stream of nitric oxide gas which has proved itself to be the greatest fire destroying gas ever discovered; that it is so simple in construction that anyone can handle it, enabling the one who first discovers the fire to operate the extinguisher, saving valuable time, as seconds count; that the extinguishers do not require any attention, as there are no cocks, valves or pumps to leak or corrode, causing them to become fixed or rigid, which in the past has proven so many other extinguishers to be worthless, and that the steam can be directed to any locality under the floor, in ceilings, partitions, or where stock or lumber is piled up, or in any out of the way places that could not be reached by other means, as the gases penetrate everywhere." Fig. 1 shows the extinguisher ready for use. Fig. 2 shows the details of the extinguisher.

Digitized by Google

Wilcox Trolley Steel Ball Bearing House Door Hanger.

The Wilcox Mfg. Co., Aurora, Ill., are offering the House Door Hanger shown in the accompanying illustrations. The hanger is made entirely of steel, while the wheels are of vulcanized fiber, to render them noiseless,

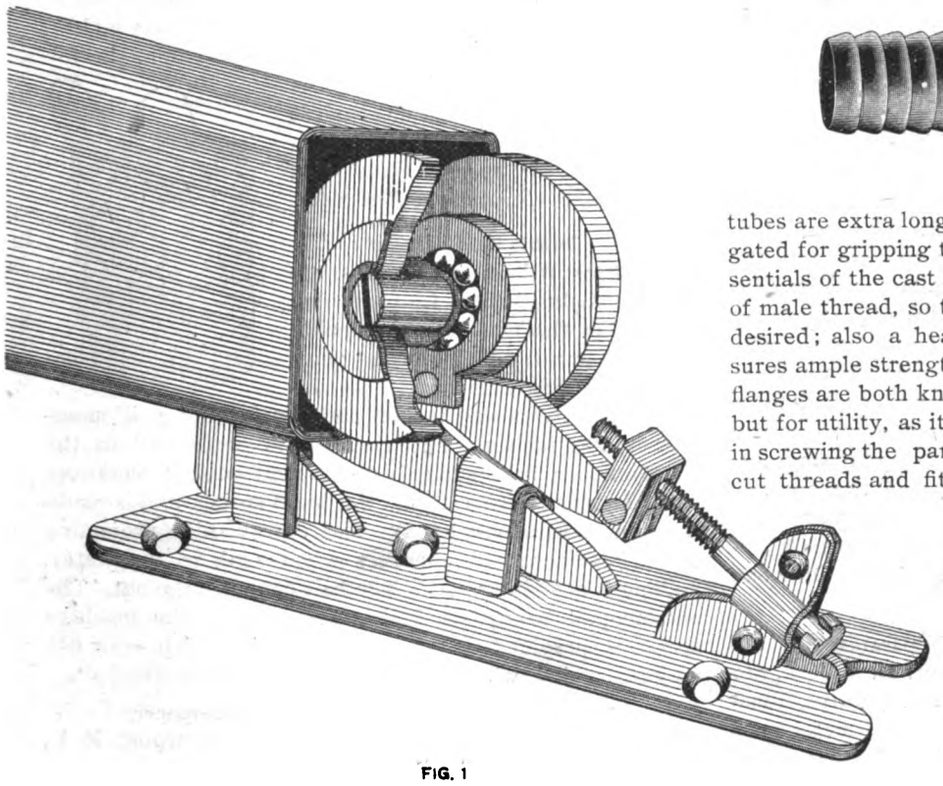

FIG. 1

and are fitted with bicycle bearings. The cones and ball races are of fine tool steel, and are case hardened to insure durability. It is remarked that the track by its peculiar construction is given more strength than is ever required to sustain a house door, and that it therefore needs no truss or brace to reinforce it; also that the flat surface presented to the face of the fiber wheel prevents any cutting or grinding of them. The track for each set of hangers is rigidly bolted to a wood header, and each set is finished complete at the factory, having no loose pieces or parts to perplex the carpenter. The fact is emphasized that the hanger has an adjustment both in the hanger and track to prevent any possibility of binding; also that both the hanger and track

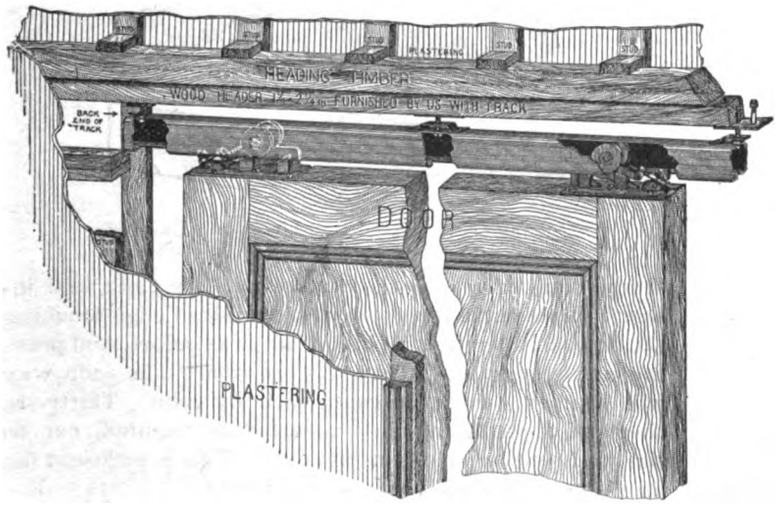

FIG. 2.

can be taken down without defacing the door or the finish. The makers state that the maximum adjustment in the hanger is ¼ inch, hence it is necessary only in extreme cases to use the adjustment in the track, and that their aim has been to produce a hanger and track devoid of complications and mechanically correct, so that it may be put up without the services of a skilled mechanic.

Sherman Hose Appliances.

The accompanying illustrations relate to Hose Appliances brought out by the H. B. Sherman Mfg. Co., Battle Creek, Mich. The hose coupling, Fig. 1, is stamped by special machinery from heavy finished sheet brass. The

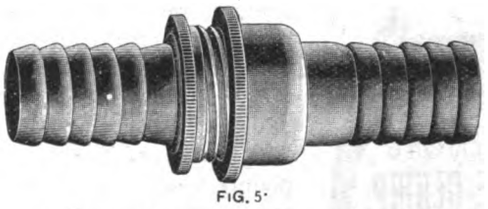

FIG. 5.

tubes are extra long, full water way, and are heavily corrugated for gripping the hose. The coupling has all the essentials of the cast article. There is a flange on the foot of male thread, so that an outside washer can be used if desired; also a heavy flange on the movable nut that insures ample strength to this part of the coupling. The flanges are both knurled. This is not only for appearance, but for utility, as it affords an excellent grip for the hand, in screwing the parts together. The threads are full die cut threads and fit all standard fixtures on the market. The seats in both halves of the coupling are very smooth, owing to the metal used, which permits of the parts being

FIG. 2.

tightened sufficiently on the washer without any undue effort to overcome any flaws in the seats, as is frequently the case with cast brass couplings. They are also free from flaws, so that there is no loss to the dealer on account of poor couplings. In speaking of the seats in the two parts of the coupling, an important feature of this coupling is that both seats are of the same size and are amply large, so that there is a good washer surface. Very heavy brass is used for the nuts and sufficient metal has been used in all parts to insure ample strength, which is further benefited by the peculiar formation of the parts. The coupling is at present made in the ¾-inch size only. It can be secured in the hose either by the Sherman clamps or by any of the other bands or fasteners on the market. The Sherman mender tube, Fig. 2, is also made of brass, and in a manner very similar to the construction of the tubes in the Sherman coupling. They are seamless, being stamped from heavy sheet brass. They are also full water way fitting, which is an important advantage, as the capacity of the hose is not reduced by a thick clumsy tube. The corrugations run from the ends toward the centre of

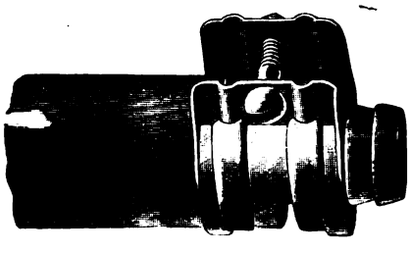

FIG. 3.

tube, where the two ends of the hose meet when they are used in repairing it. This tube can be used in repairing old cotton hose as well as rubber hose. A new principle has been employed—namely, instead of swelling out the hose to meet a clamp or wire, the tube is a snug shoving fit in the hose, and is clamped equally as firmly as where it is almos impossible to shove in the hose on account of the consider

Digitized by Google

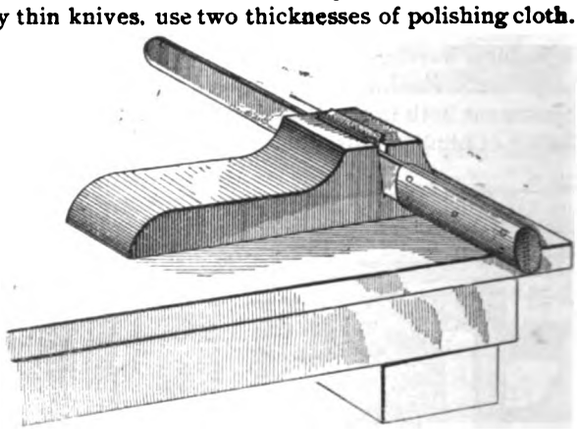
able taper which is the usual shape of the cast iron tubes used for this purpose. "There being no projecting centre piece, a single double wire band or clamp can be used to repair a break. This projecting centre ring is not necessary in the Sherman tube, as the corrugations being oppositely arranged, and of exactly the same depth, the friction in pushing it in the hose is equal, so that they will come to a centre in the middle of the tube without trouble. The centre of the tube is also plainly visible, as shown by the cut. Cotton hose, the cotton cover of which shrinks with use, is almost impossible to mend with the regular run of ubes designed for this purpose, but with the Sherman tube this can be readily accomplished. The tubes will also be suitable to use over again, as they do not rust in the hose. The Sherman double hose clamp, Fig. 3, is designed to be used in connection with the Sherman mender tube in repairing hose. It affords two complete gripping surfaces, extending in an unbroken line clear around the hose, so that there is no possibility of leaking. They are also stamped from finished sheet brass and can be readily applied by any person with a common screwdriver. Only one bolt is used." Fig. 4 shows the clamp.

FIG. 4.

The Perfection Family Medical Apparatus.

J. Jones & Son, No. 67 Cortlandt Street, New York, are offering the Perfection Family Medical Apparatus, illustrated here. All parts are strongly made, the metal ones being nickel-plated. It is provided with a finished wood case, having a strong handle and lock catch. The makers remark that "advanced scientific practitioners recognize the fact that to obtain the best results it is necessary to construct the coil upon certain scientific principles, with reference to the medical properties of electricity, and it is also of great importance that the vibrating spring should have perfect means of controlling the length and regularity of vibration, producing a smooth and pleasant current, instead of an irregular, sharp, unpleasant sensation." It is

explained that the set of electrodes furnished with this apparatus is very complete, and enough to successfully apply electrical treatment in any and all cases. A strong and lasting dry battery is used instead of the old style wet or acid one, this feature enabling the handling of it regardless of position or attention, for until exhausted, the dry battery is always ready for use. It is pointed out that by improved methods in manufacturing, the company are able to guarantee a life from six to twelve months, according to the frequency used. When exhausted, it can be replaced by anyone at an expense of fifty cents, which constitutes the entire cost of re-charging, the dry battery being a standard size, and obtainable of any supply house, or where this apparatus is sold. It is adapted for traveling, there being, it is stated, no liquids to spill, and no attention necessary to have it in perfect working order. The cases are 7x9x5 inches; weight 5 pounds complete. Each battery contains the following: Two silk conducting cords with tips, two tube hand electrodes; two insulating handles for use with either hand, or sponge electrodes; sponge electrode, and one foot plate.



Double Bait Pail.

F. Cortez Wilson & Co., Nos. 239 and 241 Lake Street, Chicago, are offering to the trade a new Double Bait Pail, cut of which appears herewith. It holds nine quarts, its exterior measure is 9x9 inches, and the interior pail measures 7½x8¾ inches. The inner pail is perforated in the usual manner, having a galvanized iron bottom, sunk top, cover fastened with a strong, flat brass spring, and is readily opened with one hand. The downwardly projecting flange becomes an air chamber when sunk in the water, making it a floating pail. The bait cannot jump out. The outside pail being two inches deeper than the inside, a space is provided between the two in which craw fish may be carried, where they cannot injure other live bait.

Johnston's Rapid Knife Cleaner and Sharpener.

J. D. Johnston, Nos. 69 to 79 Mill Street, Newport, R. I., is introducing the Rapid Knife Cleaner and Sharpener as here illustrated. The elastic blocks shown in the cut, together with polishing cloths, constitute the cleaner and polisher. The following are the instructions for cleaning knives: "Fold a piece of fine polishing cloth, and insert it between the elastic blocks—the folded edge touching the bottom; then insert point of knife between polishing cloth, and a few sharp rubs each way, pushing the shoulders up to the elastic blocks, cleans and polishes the blade. For very thin knives, use two thicknesses of polishing cloth. To

sharpen dull knives use the coarser polishing cloth, and insert it between the elastic blocks, the folded edge touching the bottom; then insert point of knife as before, and press the cutting edge hard down. A few smart rubs each way will sharpen. Price 20 cents each by mail. Thirty-six sheets of the polishing cloth assorted as required, cut to size, and sent by mail for 25 cents. This is sufficient for an ordinary household for twelve months.

The measure that makes it a misdemeanor to place or cause to be placed upon any cycle path, street, sidewalk, road, etc., any substance which might injure or puncture any tire used on a bicycle has been reported favorably by the committee on codes of the New York Assembly. Wheelmen throughout the State are in favor of this bill, and its passage is as good as assured.

THE NEW ENGLAND HARDWARE DINNER.

A banquet without any programme, speakers without any subjects, and every man allowed to indulge in intellectual go-as-you-please, so far as his after-dinner speech was concerned, were the distinguishing features of the annual banquet of the New England Iron & Hardware Association, given at Young's Hotel, Boston, on the evening of Thursday, March 19, 1896.

As President A. M. Wiley very tersely said: "There is no *sentiment* in the Hardware business," and therefore all "sentiments" were omitted from the programme. This was a new departure, quite Bostonese in its inception, and therefore, of course, a great success in its way. Each speaker probably had a very well-defined idea of what he intended to say before reaching the banquet hall, but those who scanned the very handsome evening's programme, were left in the dark as to the intellectual portion of the evening's feast. The result was a most admirable combination of patriotism, the money question, national, and New England politics, the Star Spangled Banner, Bermuda onions, and the delights of a land in which no newspapers flourished. The banquet was a great success, as are all annual gatherings of this character in Boston, and the attendance was thoroughly representative of the iron and Hardware industries of New England. We present elsewhere a diagram of the tables, which also shows those who were present. The specially invited guests of the evening were as follows:

Hon. Josiah Quincy, Hon. A. W. Tourgee, Col. John C. Wyman, W. W. Supplee, Rev. N. Boynton, David Williams, Samuel Disston, Chas. E. Adams, L. L. Ensworth, D. Fletcher Barber, Col. Carle A. Woodruff, A. L. Harwood, W. F. Bacon, James H. Kennedy.

A reception was held in the parlors of the hotel at five o'clock, and despite the heavy rain flooding the earth outside, the attendance was large and prompt, and a very delightful hour was spent in social converse, during which the officers of the association, A. M. Wiley, president; J. K. Whipple, vice-president; F. H. Butts, clerk; and C. H. Breck, treasurer, did all in their power to make the gentlemen acquainted with one another. At exactly 6:15, President Wiley led the processsion to the dining hall, where were found three tables elegantly decorated with flowers, and a menu that promised very much in contribution to the enjoyment of the evening. This was as follows:

"And do as adversaries do in law.
Strive mightily, but eat and drink as friends."

MENU.

Oysters on Deep Shell.
Cream of Dandelions. Consomme Macedonie.
Broiled Shad with Roe, Maitre d'Hotel.
Filet of Beef with Olives.
Boiled Leg of Mutton, Caper Sauce.
Roast Philadelphia Capon, Puree of Chestnuts.
Pear Fritters, Glace Charteruse.
Roast Black Duck. Larded Grouse.
Frozen Pudding, Charlotte Russe. Madeira Wine Jelly.
Lemon Meringues.
Ice Cream. Sherbet.
Fruit.
Cheese. Olives. Figs. Raisins.
Coffee.

During the dinner hour, and later in the evening, Barker's Mandolin Orchestra rendered some delightful music. At exactly 7:40 President Wiley arose and called the gathering to order, in the following well chosen and brief words:

PRESIDENT WILEY'S ADDRESS.

I am not going to encroach upon your time to-night but just a moment. I know you are impatient to listen to the words of cheer and hope from the gentlemen who have so kindly consented to come here, and assist us in celebrating this, the third anniversary, of our organization.

I want to say, however, just one word to those who come as invited guests, and assure you of the hearty welcome which is always characteristic of New England gatherings, and the cordial friendly greeting which you may rest assured will always be extended by the Hardware and metal trade of Boston and New England.

I want to congratulate the members of our association for the progress they have made during the past year, for the friendly relations which exist throughout the trade and the evidence written tonight in our faces which seems to say, "If you love me as I love you, no knife can cut our love in two."

It is a significant fact that many of these associations which were organized for the correction of certain abuses,

A. M. WILEY, PRESIDENT.

for the promotion of more friendly relation one with another, have outgrown themselves in this respect, and by their frank, open discussion, by their effort to mould public sentiment, have become important and recognized factors in our community, and I believe in no better way than this can the business man of New England exert a greater influence; in no better way than this can he more thoroughly impress our representatives and legislators that the business interests of the nation are paramount to political creed. That it is just as necessary to build a defense around our trade institutions, as around our seacoast, and that we are not unreasonable in our demand when we ask for every dollars' worth of labor we put into this Hardware business, for every dollars' worth of metal we dispose of, for every dollars' worth of iron and steel we place on our scales, we may receive therefor one dollar of pure standard gold.

At the conclusion of his remarks, Mr. Wiley in a few well chosen words, introduced Mr. William W. Supplee of Philadelphia, President of the National Hardware Association. In so doing Mr. Wiley made the fact very apparent that Mr. Supplee had had no previous notice of the intention of calling upon him before reaching the banquet hall, but the

Digitized by Google

address which Mr. Supplee then delivered, certainly gave no evidence of a lack of preparation. We take pleasure in submitting the same in full as follows:

ADDRESS OF WILLIAM W. SUPPLEE.

Mr. President and Gentlemen of the New England Iron and Hardware Association: I desire to thank you for the honor conferred in the invitation to attend this Third Annual Banquet of your Association, and for the further courtesy extended upon a former occasion when it was not possible to join you.

A celebrated and distinguished orator once stated at a banquet in our city, that no man could do himself justice when he attempted impromptu after-dinner remarks upon an occasion of this kind. He further stated to one good after-dinner speaker there were at least a hundred wind instruments. I am therefore standing here in the position of the first, as well as the criticism of being the latter.

The Rev. Dr. Stryker stated at a recent banquet in New York, at which some here were present, he knew what it was to sit during an entire evening, anxiously waiting and wondering if there was going to be any time left for him.

WILLIAM W. SUPPLEE.

I admit I cannot appreciate that feeling; I do know, however, what it is to sit holding my thumbs, anxiously hoping my time would never come.

A successful railroad president who presides over, I believe an always dividend-paying road, unlike his distinguished rival the peerless inimitable and pyrotechnic after-dinner speaker, seldom attended a banquet. He was, however, upon a recent important occasion persuaded not only to attend a banquet but to make an after-dinner speech. He was much chagrined, however, to find after he arrived the heading of his speech was "The Business Interests of the Country." He stated he knew nothing about business, and had prepared his speech on the subject of the "Railroad Interests of the Country," therefore he requested that the heading of the toast be considered changed suitable for his speech. Now I have no undelivered speech at my disposal, which I can swap off for the occasion. I was only informed a couple of hours ago that I would be expected to make some remarks during the evening. I would have been more surprised had I not heard this, however, when, a couple of hours later a progressive journalist asked me if I would kindly give him a copy of my speech. I could only inform him that the scattered thoughts would be collected in the process of delivery.

I have in my employ an old colored man, who attends furnaces, etc., who occasionally preaches. I said to him one time, "Richard, when do you prepare your sermons?" Said he, "Oh! Mr. Supplee I never make any preparation:" (which is a mistake, however, for his ventriloquism is occasionally heard in the cellar), but, he said, "I never make any preparation, I go into the pulpit and take my text, and trust to providence and then if I make any mistake it is not my fault but the fault of providence."

It has been frequently stated of late that the present era is an era of organization, which is unquestionably correct, and it extends over the entire country, and is shown in the various branches of trade, commerce and finance. Classed with these organizations your Association is one of the laudable examples.

We have passed through an era of trade jealousy, but we are all proud of the fact that we now stand upon a higher pedestal and are now ascending the ladder of progressive business methods, and I have no doubt that many here, like myself, are able to name many upon their lists of delightful social acquaintances who a few years ago were looked upon only as antagonistic business rivals.

The jealousy was not confined to the jobbers alone, but occasionally manufacturers of competitive lines have become so heated in the caldron of animosity and jealousy, that it has required the utmost rigor to induce them to rise above that feeling, and enlist in the army of volunteers who have emblazoned upon their banner "a high standard of business methods." Our possibilities are great and I feel our progress will not be discouragingly slow. As a people and as a country we have made unparalleled strides since the old bell now lying silent in our city proclaimed liberty to all our land. From the then less than three millions of inhabitants, we have grown to the gigantic number of over seventy millions of people. Mails that then reached you on horseback, and in the later days of the old stage coach, have long since passed into oblivion. In those days General Washington, who came here to confer with your people, stated he found it an easy task to reach this city from our own in one week. Now after the duties of the day are concluded, we are able to enter luxurious sleeping apartments, and arrive here by daybreak the next day. Electricity, steam, the telegraph and telephone have shortened distance, and we find our daily morning paper upon our table containing the news of the Transvaal, the war in Abyssinia, the expedition up the Nile, the turmoil in Spain and Italy, and the war in Cuba of the preceding day, with the same degree of regularity as occurrences around the corners in our own city.

Our railway has paved the way for travel over nearly one hundred and eighty thousand miles of roadbed, and their operations give employment to nearly eight hundred thousand employees. Statistics report a carriage of over five hundred and fifty millions of passengers, and about six hundred and fifty billion tons of freight during one calendar year.

The productiveness of our soil enables us to raise everything that human nature requires if we except tea and coffee, although the exigencies of the case during the Civil War gave us a very fair substitute for these articles, and if a stone wall was built around our country, or our entire ports blockaded, our own manufacturers could more than supply us with everything the country needs. No nation in the world can show such a record.

Every rising of the sun finds our country a richer nation in both wealth and productiveness over the preceding day. Our employees are better paid, our people far better housed, better fed, better clothed, and the opportunities given for education far better than exist in any other country in the world.

Digitized by Google

There is one serious problem which confronts us, and from which we have recently suffered, which, I feel, could be satisfactorily adjusted in a short time were it not from the fact that personal interest, sectional obstruction, and partisan supremacy on one side or the other, so frequently block the way. These impair the usefulness of our representatives and have the unwholesome effect of retarding legislation. Whether our greenbacks have been a financial loss in the past need not necessarily enter into discussion. This is a matter of arithmetic which can be easily solved. We do know that financial heads of institutions have discovered our weak spot; foreign nations have rubbed it into a sore, and we must now expect constant irritation until the sore is healed. But in the sudden withdrawal of greenbacks we must necessarily be provided with a sufficient currency to take its place. This cannot be done until it is made profitable for the banks to substitute such a currency. Under present conditions it is not profitable to purchase bonds at a market value of 1.15 to 1.17 and deposit them with the Government at 90 cents on the dollar. Nor is the 1 per cent. tax necessary when statistics show that ¼ of 1 per cent. is sufficient to cover all expenses. The last sale of Government bonds was sold at 110.688, and while there might be a question of the desirability of the Government taking them as security at the price they receive for them, there is no reason why the Government should proclaim to the world they discredit their own bonds to that extent when they refuse to take them as security at a higher rate than a discount of ten per cent. from the par value. If it was made sufficiently profitable for the banks instead of compelling an actual loss, they would have furnished currency in 1893 when currency sold at a premium in some of the large leading cities at ½ to 1 per cent., and more recently when the last two sales of bonds made currency almost unobtainable for commercial purposes in some of the large cities. I contend this holding of funds by our banks could all have been avoided if this defect in our system was corrected.

I speak of the currency question because it is a matt that affects you all. It is in no way a matter of politics, it is a patriotic matter, it is a dark cloud now hovering over us, which, if it becomes broken and disappears, I feel that immediate prosperity would be assured.

There is a grand field open in our country, and it is my sincere desire that associations like yours may be established and successfully conducted in every city in the country, and that the National Hardware Association may stretch out its arms into every State in the Union, and reach the acme of strength we all desire. Gentlemen, I again thank you for the kindness extended to me.

REV. MR. BOYNTON'S REMARKS.

The president then introduced the Rev. Nehemiah Boynton, who told several entertaining stories in a pleasing manner, and then said:

And now I desire to say an earnest word to you, if I can. Your progenitor shall be my text. There is a person of whom you gentlemen in the Hardware business are descendants. That is old Vulcan, that magnificent patron of your craft. He had two characteristics,—first of which was, that all the goods which he put upon the market were absolutely first class. Whatever he forged in his smithy was the most wonderful, the most marvelous, and the most perfect of its kind. Vulcan was a master mechanic. He had one other characteristic that made him what he was. He was not only a manufacturer, but he was an idealist. He not only made things that were beautiful, but he was the creator of the beautiful, first in his own thought, and afterward upon his forge. Thus he coupled two essential characteristics, that every aspiring soul should have or be: it should be an idealist, and it should be an inventor. And the earnest word that I have to say to you to-night is this: That no man can score in the game of life, of real life, who is not on the one hand an idealist, while on the other hand he is an inventor. Putting the same truth in another phrase: The great thing in this world is the accentuation of character, and not the simple accumulation of capital. It is a

small man wherever you may find him, and however much may be his apparent success, who can see nothing larger in this world than the almighty dollar, for which he is always reaching and grasping,—small not only in the esteem of the world, but smaller in the esteem of his soul, in those quiet moments when now and then one's soul is compelled to size itself up. I do not mean that a man should be in every sense a business man, but I do mean, and I have all men of common sense with me when I affirm that the business should be made the incident after all, and not the consequence of it. There is something better in the world than trade. That a grand ideal is after all more worthy than a simply elaborate industry, in which perchance you have for the time being a monoply. I would go further, you cannot have a real success unless there is something larger than the mere idea of business, pure and simple.

REMARKS OF DAVID WILLIAMS.

At the conclusion of Rev. Mr. Boynton's address, the president introduced David Williams, of the *Iron Age*, New

F. H BUTTS, SECRETARY.

York, who responded in an able and entertaining manner as follows:

Mr. President and Gentlemen: It is very pleasant for me to meet here so many persons with whom I have had pleasant business relations for very many years, and some of whom I am proud to consider my personal friends. I know you will excuse my being a little late on this occasion, when I say that at 9 o'clock this morning I was landing from a steamer in New York, and the first train which I was able to catch brought me to Boston at about the time you were sitting down to this banquet.

The previous speaker has well said that no good work can be accomplished by any one who does not feel the fullest sense of the importance of his occupation and the greatest degree of personal enthusiasm in its prosecution. When about a month ago I sailed for Bermuda, I felt the pride that every thoughtful person connected with journalism must feel when he looks back at what the press has done for the world, and the evident greatness of its function in the future. We can trace all that we have of practical science, of industrial art, of political freedom and social advancement, to the comparatively short period of less than five hundred years, since the invention of printing. Before that the world presented a more or less dreary ignorance, superstition and tyranny. The efficiency of the press as an element of progress has been strikingly shown within the last few weeks, by the astonishing way in which Prof. Roentgen's discovery of the X ray photography has been imitated, improved and developed by scientific men, in every quarter of the globe.

But I have spent a month in a country in which the press is in so rudimentary a condition that a newspaper in Bermuda of March 5th reported the proceedings of the Bermuda Parliament in their session of January 4th, and I heard nothing about the X ray until on landing in New York, the Custom House official made a joke about it, saying that he would be compelled to open my trunk as he had left his X rays at home. I wish this mysterious photography were sufficiently developed to enable us to find out the sentiments of some of our public men on the silver question.

Still in that quiet country they live so happily and peacefully without the information, excitement, push and bustle of which we are so proud, that I almost doubted whether the press had not developed the American people to too high a state of civilization and enterprise. I was cogitating a movement among the press of this country to keep back the reports of current events as they do for a couple of months, and enable the American people to live quiet and contented lives until at last they die of a ripe old age as they do in Bermuda.

As my carriage made its way with difficulty through the throng of vehicles in Washington Street (one of the most crowded thoroughfares in the world), I envied the peace and quiet I had left, but as I see the faces of those about me, I appreciate the impossibility of carrying out the project I had in mind, for although it would probably be very acceptable to the conductors of newspapers, I feel that your New England Hardware & Iron Association would never put up with it.

The Bermudians are not, however, without some signs of progress as we understand it in New England. They have organized and have great hopes of successfully managing an association to regulate the shipment and control the prices of the onions and tomatoes raised on perhaps a thousand small farms there, and as they have secured the co-operation of about half of these producers, they believe they will be able to control the market. You, gentlemen, who have had so much experience in the formation of organizations to help the laws of trade, and who are still reaching out for other lines to conquer, can estimate perhaps better than they the influence of that proportion of "outsiders."

One of the speakers who has preceded me referred to the effect of organization in removing competition and lessening the asperities of trade, and would lead us to suppose that in this respect a new era was dawning upon the country. From my point of view I think he was too enthusiastic. The competition is just as keen, and if it takes some other form than that of cutting prices, it is just as bitter, and the penalties and risk of failure are quite as great as ever. The rules of the game may be more strict, but the eternal rivalry goes on as it has from the beginning of the world. I am reminded of the Irishman, who, quarreling with a Frenchman, was given the choice of weapons and selected the shillalah. When informed that that was not possible, that he must select some weapon known in France, he said: "Known in France is it? then, begorra, I take the guillotine." The new weapons do their work with neatness and despatch, but are none the less deadly. Let us, however, emulate something of the spirit, even if we cannot altogether endorse the calculation, of the old skipper in the days when passengers made the voyage from New York to Albany in sailing sloops, and were very apt to while away the tedium of the long days at the card table. On sitting down to the regulation game of seven-up, he said: "Gentlemen, let's all play fair this trip. We won't any of us make so much money, but we'll all make a little."

ADDRESS OF JUDGE TOURGEE.

The main speaker of the evening, the Hon. Albion W. Tourgee of New York, the well known author, was next introduced in a felicitous manner, and delivered a very sound, able and eloquent address, the main portions of which we are permitted to herewith reproduce. Judge Tourgee said:

Mr. President and gentlemen: There is something very delightful always in such gatherings. Perhaps I might say there is always something delightful in New England anyhow to a man, like myself, coming without the pale to an assemblage of this sort. There is something infinitely refreshing in the idea of a Congregational minister rebuking kicking. There is something extraordinary in such an experience of our friend from New York, that he gives us, which reminds me, by the way, of a cartoon, one of those exquisite cartoons of that greatest of English cartoonists, representing a couple of well-fed aldermen, just passing out of a club door, and being greeted there by a poor woman, begging for a pittance, saying: "For God's sake, gentlemen, only a shilling, I have had nothing to eat for three days."

"Go away, woman; go away. Good God! What wouldn't I give for your appetite!"

There is something very delightful in a man fresh from Bermuda giving us a new comment upon that biblical text —"And many would come unto him, but could not for the *press.*"

And so I stand here to-night, quite as well prepared with an apology or excuse as any one, because your worthy president sent to me in all haste by post and telegram, to send to him a sentiment for this occasion. And when I landed here this morning, he was my first caller, and said my sentiment was a good one, but we have concluded, said he, there is no sentiment in the Hardware trade. I judge that to be true with ink, because our friend says that trade to-day is on the model of Joab, who came to his friend and taking him by the beard, punched him in the fifth rib at the same time.

Another friend called upon me to-day, and as he was going away he asked me, just incidentally, you know, what I was going to say, to talk about to-night.

It is said to be a characteristic of New Englanders to ask questions; and sometimes peculiar questions. You remember that Martin Van Buren at one time was reproached because of his born dislike for Massachusetts, and was told that he ought to come up to Boston and meet Massachusetts people, and have some knowledge of New England. "Gentlemen," he said, "I went to Boston once. I stopped with a most estimable gentlemen there, and he asked me for an office before I could get his codfish in my mouth."

What are you going to speak about? A typical New Englander? I said I thought I would speak upon a new subject. Yes; that is what I told him—I thought I would speak upon the Modesty of New England. He laughed and evidently didn't believe me. I am not so certain he didn't think that I was joking; and yet I was in dead earnest. I frequently think that a great many wits get their reputation largely for jesters because people believed that they were speaking in earnest.

You know a man who spends a considerable portion of his life in the study of humanity, its types and characters, is apt to have a particular notion with regard to this man, of this type of man or another. And somehow or other it has grown upon me that after all that is said and done, the most absolutely, thoroughly modest man on earth is the New England man, individually and collectively. Perhaps the fact that he is unconscious of it is the best proof of it.

Collectively, it is unquestionably true. In that first thing that ever attracted attention to the new world as an actuality, I mean outside of the mere pursuit of gold, as a place of habiration of a race of men, in that struggle that came in our country history, before we were a nation, between the idea of New England and the idea of Jamestown, between the thought of personal liberty and the absolute lack of right for the great portion of the population, in that struggle that ripened through infinite vicissitudes, into that struggle that made us a nation, it is unquestionable that New England had the first place. She was the first one to find fault.

It is a great thing to find fault. Our friend who has anathematized kicking has evidently forgotten the fact that fault-finding is the first element of progress. The nation, the people, the individuals that are willing to sit down and take what comes, and thank God, run the chances of the devil. There is not much hope of them. Progress does not come through any such sentiment. Progress comes through humanity from an infinite and universal discontent with what is; an aspiration for something that is better. And New England then, as now, was largely affected with this inclination. She was not only conscious that wrong was done to herself, but she was very conscious

C. H. BRECK, TREASURE.

that other people should be conscious of the wrong done to them. It is something in the air of New England, even to-day, that makes him differ very largely from hiscon gener of the South or West. He is a modest man, and he is anxious especially that his neighbors shall be right. He is willing to expend a great deal of his time to set them right. You visit a Western town, a Southern city, and ride out with your friend, and you would think that millionaires only lived in that town. He booms it from A to Izard, from beginning to end. But you come to a New England town, and you ride out with a friend, a minister, deacon or banker. And he is so fearful that you will obtain an exaggerated idea of the perfectability of that particular portion of the footstool he occupies, that in pointing out the individual residents of the town, he is very careful to call your attention to their defects of character.

It is a fact, I say, that manifested itself very early in our colonial history, that wonderful history that we hardly look back upon with very much regard, especially in New England, perhaps we hardly think worth talking about. Our literature? You know the fiction of a people is fully a true guide to their character. It may seem a strange statement, but the only man who tells the truth about his people is the man who writes fiction. And he tells it because whatever

Digitized by Google

may be the character of his imagination, it is shaped by his environment; all his aspiration is shaped by his view of his neighbors and fellows. And New England fiction, take it for the last twenty years, what has it been? If it is characterized by any one quality whatever above all others, it is in that strange depreciation with which it regards the character of the New England man. A New England man is worthy of nothing. Take our Southern fiction, and it puts the Southern man in his very best aspect. If it touches upon his vices, it glosses them over and contrasts them with his virtues. If it touches any element of Southern life, it puts a glory, a beautiful idealism into it. But New England is the home of realism, American realism, realism that to use the image of one of your own poets long ago, sets the character of New England so low on the inverted apex of its own littleness that it required an infinite effort of human genius to bring it high enough to stand beneath a decent man's contempt.

Modesty, modesty, that means what it is. It showed itself at the very first, although the great struggle had its root in New England character, and New England protest and New England determination that somebody else should do the right thing, and that was so for the command of the army was given to a Virginian. And very well, very justly, because a people that could go to war with "Yankee Doodle" as their national anthem, were especially weakened by the modesty that would make fun of their own self depreciation. It is singular that in all the world's history there has never been a group of people, nationality or idea that could get into a great conflict with self-depreciation on its banner. And the reason that Virginia led in the struggle was because New England was so modest that she could not stand by her men, to her ideas and thoughts.

Of the first ten presidents of the United States, New England, although the largest aggregation of power in our nation, had two and Virginia eight. Oh, well, such attributes do not die. That wonderful spirit of individualism, which has made New England what she is—understand me, gentlemen, I do not stand here to depreciate New England. I had the misfortune to be born in Ohio, but I come of sturdy New England ancestry. I wandered back to this commonwealth in which we now stand with the vague idea that the New Englander carried away with him in the West that Massachusetts was a little nearer than any other place to God's footstool. I graduated at the greatest of New England's institutions—pardon me gentlemen, I do not wish you to misunderstand me. I do not mean Harvard, Yale or Dartmouth; but a little country factory that stood on the hill-side creek, from which came manhood, the right kind of manhood, a manhood that poured itself all over our western land. I count it the greatest of New England's institutions. I fear that New England has gone away from the thought, and our history shows a strange propensity of New England to go away from home and grow bigger the further she gets away.

And the time came in another great crisis of the nation's destiny when the children of New England led New England herself willingly on, self-forgetful into the conflict, There came a time, an inevitable time when the England and Jamestown idea must join in conflict on this continent. The thought sprung here, the liberator was here, the champions of that liberty were from New England. The whole thought of personal liberty and individual equal right was of New England. And yet New England did not lead again. In the organization of the Republican party, which was the aggregation, the representative of the New England idea in our government, New England fell to the rear. The new great Republicans of the West took the lead, and Abraham Lincoln was the leader and type of what was to be the prophet of a new dispensation.

And since that time, since his time, New England's modesty has been shown in a remarkable degree. During that time she has been most constantly an element of the power and success of the Republican party. All the time she has furnished eleven senators, and all but two terms twelve; and a larger proportion of representetives advocating every substantial element of the Republican idea than any other aggregation of citizenship in the United States. During that time her population has averaged about the same as the state of Ohio. She has furnished twelve senators all the time, and we will say twenty-two representatives—it averaged something more than that. The state of Ohio has never once had two Republican votes in the senate—those only for three months, and usually it has been an even stand off in the house of representatives. Yet the state of Ohio has received from the Republican party two presidents, and four of those chosen to the presidential office of the party have been natives of that State. Only one candidate of that party has been in New England, and that candidate was not very well supported by New England.

It is her modesty. It is said, the words of that most exquisite philosopher of all the ages, the man whose wit was always wisdom, and whose wisdom was always sweet with the fragrance of humor,—it is said that his words might very aptly be applied in this case. You know when the Autocrat of the Breakfast Table was asked what a man should do in order to secure great longevity, he replied that the man who desired to live to a green old age ought to begin by selecting three or four generations of long-lived ancestors. And so while the whole idea, the whole controlling impulse, the dominating forces of the Republican party in this country hae come originally from New England, we find it a fact that the Republican who desires the highest preferment in his party shall always select a residence in Ohio, an Ohio degree.

During that time, you remember, that the State of Ohio has not only been the birthplace of every president but one of the Republican party, but also received the honor of having the only three men out of four—Gen. Washington was the other—who have attained to the supremacy of rank of general in our army, and has during that time received the utterly unprecedented honor of two Chief Justices of the United States; and, in addition to that, two justices of that court, and in addition to that, five members of the Cabinet, and in addition a very liberal slice of everything else that represents National authority.

Now what is the cause for this modesty of New England?

The modesty of New England! She is so delightful, we are told, you know, of course, it is somewhat libellous, but we are told that New England life, such is its character, that it makes a very unreliable friend, an insignificant enemy, that it does not generate the capacity for leadership, nor the capacity for actual, strong, co-ordinate action. I don't know about it; I only tell the truth as it appears to me upon the page of history. I go through the West and South, and I find pride basing itself upon its own particular development. I find the New England man at the West and Northwest the very key, the leader of all thought and action. I find the same men segregated in New England, standing back, ineffective, modest. What is the difference? Why, to-day, Ohio after having received from the Republican party from ten to twenty times the honor which New England has received, is to-day demanding a new head and consecrating her youngest son the father of protection! Think of it!

I am an Ohio man; I am proud of Ohio. I am proud of her history, and I must say I rather like the idea by which she stands by not only her principles, but her men; by which she puts herself into the fight and always has one candidate, usually two, not waiting for somebody else to give her a choice. I understand that the Democracy of

Digitized by Google

New England to-day would consider itself very well gratified if Richard Olney were given the ungracious task of appearing before the people as the inheritor of the misfortunes of the last Democratic administration. The one man in all its connection that ought not to be cursed with such a mill-stone.

No; I think there is something worth considering. Leaving outside the whole question of its exemplification in politics, it comes back to the fact or factor of being a factor in our lives.

Now, I am one of those men who regard politics as one end of religion, and sometimes the best end too. I regard the field of citizenship as the greatest possible field of Christianity. I like to see the man who doesn't stand off and say that "politics is a filthy ditch into which I cannot go; my character and my purity will not permit me to go into it." But I do like to see a man who takes off his coat and goes into the ditch and goes to cleaning it out. My ideal of a Christian minister I found in the city of Denver, a few years ago. I happened to go to a prayer meeting. I do sometimes when I am away from home, which perhaps some of you gentlemen do not do.

The young minister opened the services with a hymn and prayer. Then he arose and said: "Brethren, I see there are here seventy-eight men. While we are here engaged in this service, a few blocks away the Lawrence Street caucus is being held, which will determine whether good men, honest men or black-legs and thieves are to run the city of Denver next year. Now, I think, brethren, we had better go to the caucus and leave the sisters to run the prayer meeting." I have never met an instance of practical Christianity in the form of a minister to compare with that man. He went to the caucus, and cast his grand individuality into it, and honest men ran the city of Denver that year.

I don't care so very much about the other world. It is a little beyond my jurisdiction. It is not of much consequence to this world whether you or I are to be saved in the next world or not. But it is of infinite consequence to this world whether you and I will do our duty in this or not.

Christianity as an earthly sentiment finds its grandest field or expression in political thought and political action. You and I, in trade, in business, in private life—we touch ten, twenty, a hundred, a thousand lives, possibly in a long and active life, may touch five thousand. That is the limit of our influence and perhaps our endeavor.

But as citizens of an American Republic, we are one component part of a force that means the good of not merely seventy millions of people to-day, but of all those millions descended therefrom, that shall stand betwixt us and eternity. Twice has the thought of New England been central, been important, been essential to the life of this nation. Yes, gentlemen of the Hardware trade, once Hardware itself has been a determinative of the life of the nation. If the Rebellion had come ten years before those four lines of steel rails had shot out into the West, we of to-day would be a divided people. The Hardware business, gentlemen, saved us. There is no question of that. And so business life, political life, individual activity, the determination and your line is at the feet of future progress. I am not one of those people that believe that we are going to the devil. I never could bring myself to believe that the world to-day is going backward. But we have been eliminating those things that were bad in it. We have changed the point of view.

New England was very anxious about those within her borders. She was so anxious that they should be right, that she was willing to end their mortal careers to prevent them from corrupting the rest of humanity. To-day New England at the East or West is not very anxious about what the rest of the world, especially within her domains, shall believe, but amazingly anxious what they shall eat and drink. She has simply changed the field of activity. To-day it is not a question of individual, but of individual opportunity.

There is a new crisis in our nation. It has come. We have had it alluded to to-night. It is a new one. We are at the threshold of a new character—the assertion of American nationality. Hitherto we have been trying to accomplish all we desired in an economic way, in a moral way, in a social way, in a political way, by setting each other right. We have said that this section was wrong; this idea was wrong; and the conflict has been for the possession of the soil, until we have stretched from ocean to ocean. A hundred years ago it was recorded that the world could not produce enough to support its population. But to-day we can produce in a year more than the world could consume in three or five. And because of that, the idea of supply and demand inflexible and all-sufficient has become insufficient. I don't suppose that you and I would eat two more ounces of flour if it were only five cents a barrel than if it were twenty dollars a barrel. The demand is of the individual, and consumption is regulated not by price but by the waistband, the capacity to accommodate. So in your own line of trade we all know that the labor of to-day can produce iron and more of every form of iron that is used than the world can consume. We can build more houses. We can do everything that the world is required to do more than is demanded. But what is the other great fact that stands here against this? What is true superlatively of us is not true of every nation of the world, and we find that certain nations need what we can produce and give what we cannot produce. So we have two great economic principles, that our American markets should be protected for American manufacturers. We were protected against the manufactured article, but not against the manufacturer, not against foreign labor. We are still wedded to our old idea that Uncle Sam has got to give everyone a farm and a home. I am not one of that kind. I don't think that the American Republic has any difficulty to cure; to heal poverty or weakness in any other nation. I think we are just as much required to protect the American laborer against the foreign as we are against the foreign article.

I think something more, that the great American idea which found expression through the magnificent brain of James G. Blaine, reciprocity, is the ground upon which our nation must fight in the future. I quite sympathize with his anger when he smashed that new hat on the steam heater in the Senate committee room and said that mere protection as a means to secure commercial ascendancy and economic value in the United States were just like a goose trying to fly with one wing. It has been shutting our markets to foreign nations. And if we are doing that with Europe, why we are doing it with Asia. But to-day we stand in a very new position. For the first time in fifty years, without regard to political party, our whole country is thrilled with Americanism. Our people are realizing with true instinct that we are upon the threshold of a new epoch. That no longer is our conflict with each other; that no longer is the struggle between section and section and man and man; but between nation and nation. We recognize the fact that to-day we must conquer for the American people our place as a commercial nation. We must reconquer our place upon the sea. We must make for the leadership, for the commerce of the new world, as well as for the political headship of the League of the American Republic. And to-day we are realizing it as a nation.

Anything that keeps us less in dependence on Great Britain, whether it is the cut of our trousers, the character of our economics or finances, ought to be remembered in our churches with prayer. She is our rival. She is our great and dangerous rival; for whatever follows her must always follow or rebel. There is no other safety. I believe that the time is near at hand when we shall have a merchant marine. I believe in American ships made in American yards, owned by American citizens, manned by American sailors. We should have a differential duty that shall put us on an equality with any other nation. We have forgotten the value of this great trade. The greatest avenue for profitable labor and capital that is now before the American people is on the sea. No, I am going to go a little further. It has been referred to once or twice tonight. Facts are stubborn things. So are men, especially are New England men. It is very hard to ignore that fact that one man believes that this is right and another wrong. To-day, while we shout over the fact of a dollar equal in value to a gold dollar, we are forgetful of the fact that in so doing we are cutting the only represen-

Digitized by Google

tative that we have. We are cutting down to the limit of the six hundred millions of gold which is in our country and which has long ago ceased to be currency, and has been used for speculative opportunities. We are forgetful of the fact that the greenback for thirty-four years served us for the best currency of the nation, and now to take it out of existence and to supply its place by bonds and bank currency, you know what the result must be. The result of those thirty year bonds for three hundred millions of greenbacks is seven hundred and sixty-four millions principal and interest. It is a terrible load for any people to carry. And what are we to have in place of it? Why, a bank currency not a legal tender. You must remember this one fact, that there are only two ways of getting money out of a bank, so that the people have not only to pay this burden of interest on the bonds, but they have also to pay the interest to get a bank note currency circulation. There is always two sides of a question touching the interests of a people, and both sides are always, in a free country, supported by men who believe just as earnestly as in any other struggle which arises between other nations and ourselves. It depends on a united people finding a way to settle this great question of our national currency. It cannot well be done by force. In the Senate of the United States those who represent one idea hold the balance of power, but you might as well recognize the fact that those men are men of quality and will not back down. They are men whose ideas are based on a sincere conviction. The race is not always to the swift, nor the battle to the strong. And men commanding a position and holding that with a power of conviction, one of two things must result: either they must be trampled down or they must be met with some sort of compromise of conciliation. But we say there is no chance of compromise. My profession has something to do with compromise. I never saw a case on the earth in which was not claimed all the earth, and claimed up to the line, and there was no middle point. When the parties confronted the fact that they might either of them fall back to either fellow's line, they found a middle way.

There is a middle way on this question. To-day the appreciation of silver is so great that in a short time it is likely to approximate the value of gold without legislation. Supposing to-day they were to establish banks in which silver coin shall be the capital instead of United States bonds, what would be the result? The taking of three or four or ten hundreds of millions of silver out of the world's market, and I venture to say, to-day, gentlemen, that if you take three hundreds of silver out of the world's market it will be worth dollar for dollar with gold.

There is a middle way, but that way is not to be found out asserting the extremes of right, but by recognizing the force and honesty of conviction of both sides.

I beg your pardon, gentlemen, for having covered these various grounds. But I believe that the condition of our country of to-day is not less dangerous than it was at the beginning of that at which its life was in the greatest peril.

MAYOR QUINCY'S ADDRESS.

This very able address was listened to with the closest attention. At its close, the president introduced the final speaker of the evening, Hon. Josiah Quincy, mayor of Boston. He said:

Gentlemen of the New England Iron and Hardware Association, I had asked at this late hour of my coming in the evening, which was necessitated by my other engagements, and prevented my coming earlier, to be allowed to put off what little I might have to say to the members of this Association for another year. I am sure it would have been more satisfactory to you as well as to me, coming as I do into the exercises at this late stage, to undertake to say anything tonight, but Mr. President, as you have called upon me and not allowed me to postpone my remarks until the next dinner, I will address a few remarks to the Iron and Hardware Association, although they will be brief and few. It has occurred to me in connection with your organization that it stands as does organizations of a kindred character, and that they have a certain place in the business of our section and of our time, as also in the political life and thought of our day.

I felt the necessity, Mr. President, of attending more of these gatherings than have been customary for those who have held the office of mayor before me. And on one particular account. That is, I feel perhaps a deeper interest in promoting the activity of business organizations in connection not with party politics but with public questions, and political questions in the broadest sense of the word. I think that any one that has watched the growth of business organizations of a character such as this during the last ten years particularly, during which many of those in this part of the country have been formed and have gained strength and character, cannot but be impressed with the fact that there must be something back of these organizations, and the different trades and different lines of business which we know have been their end. Perhaps we can claim for New England that among whatever deficiencies of character to fully assert herself she has recognized the possibility of the value of business and trade organizations and the part which they can play in creating a wholesome public sentiment upon many classes and upon public questions, particularly to the welfare and the business of this country. We see to-day in Boston and Massachusetts and New England a strong body of business organizations each representing its own trade, and then joined together in the more general organizations of boards of trade, representing a city or a State. And these organizations uniting in the capacity to make themselves felt as a factor in the creatian of sound public sentiment, upon such questions as the currency question, in the promotion of commerce, in great undertakings, which, owing to their business training, and their ability to grasp facts theyare fitted to lead public opinion, And I feel that anything that can be done by the public authorities by encouraging this movement, this growing interest of business men in an organized capacity to consider political questions is well. And so I am in this assembly tonight. In spite of the fact to which the last speaker referred that New England has done so much outside the borders of her own section; that she has sent out so many of her sons in business enterprises and of politics in other sections in the country, she yet retains a life of her own within her borders for which she has no occasion to blush. And if she is not as self-assertive as some other sections of the country, if she is not so self-assertive as some Ohio men, nevertheless, probably in their more homely and quiet way and more modest style, New England men in the field of thought are contributing even to-day to the advancement of the nation.

The problems of to-day, as the last speaker has well said differ radically from the problems of the past. The problems of to-day are largely of a business character. We are passing through a certain political development of the country, and while I would by no means underestimate the importance of those which are of a political character and have no special or peculiar bearing on commerce, it seems to me that upon the whole the class of questions which affect the welfare of this country's people most vitally to-day are such questions as the currency question, such questions as relate to transportation, industrial, and the manufacturing interests of a great country like this. New England, not only outside of her own borders, but within her own borders has contributed her part to the solution to these questions which are primarily of a business character. New England men have pronounced their views on the question of our currency and I am glad to know that the business men of New England and of Massachusetts are arousing themselves to the importance of the currency, are studying it more, and best of all are taking an uncompromising attitude upon it and serving notice on both political parties that they can not receive the support of the business sentiment of New England unless they put themselves on the currency question on a sound platform.

Our ideas in this section of the country doubtless differ from those of other sections of the country. But it seems to me we may well copy the example of the silver senators, to whom the last speaker referred in regard to the courage and single mindedness in which they stand, in season and out of season, for the financial ideas they believe in and which their constituents believe in behind them. And I think that it is time that the public representatives of New England, and the leaders of New England, in every walk of life should stand as firmly, as uncompromisingly and as persistantly for those ideas of finance which we in this part of the country more generally believe to be sound and right as the representatives of the silver States stand up for their peculiar ideas. Let us have a clash, if need be, of these oppressing forces. Let us measure their strength, let them come together and let us show that we can fight it out with as much persistency in the interest of what we believe to be sound currency and finance in New England as some of our friends in other parts of the country.

We agree very heartily, Mr. President, that New England in certain respects has been too modest. I think Mr. Tourgee is entirely right in the statement that he made that New England playing as she has such a large part in

Digitized by Google

the Republican party have been too modest in what they have asked for in the way of authority, and in the leadership in the Republican party. And she may take a leaf from the experience followed by the successful example of the Republican politicans of Ohio in the endeavor to obtain a little more weight, a little more importance for our section of the country in the council of the Republican party. I say Republican party because that is the party which in New England has generally been supported, and there is no great use perhaps in urging that the New England Democrats should assert their claim to larger shares. Nevertheless, Mr. President, I do not take the same discouraging view of the prospects in the next presidential election of the party to which I have the honor to belong. I feel for one that it is worth while to get a ticket in the field, and that ticket can have no better name at its head, no better New England man than Richard Olney. In fact if New England can overcome her innate modesty, she stands in the coming convention of both of the great political parties in a peculiarly fortunate position, and that New England men regardless of politics may well declare an earnest wish for the nomination of Mr. Thomas B. Reed for the Republican party, (tremendous applause), and for Mr. Richard Olney for the Democratic party; and then New England would seem to be safe which ever way the election may go. (Laughter and great applause). Seriously, gentlemen, as a New England man, it gives me great satisfaction to see a man although in the party which I have not the honor to belong, a man occupying the position of speaker of the House of Representatives, standing by right principles, by right of brains and force, and leadership, at the forefront of his party, and in a position which ought to make him its logical candidate for the presidency, and I hope it will.

But, Mr. President, I have wandered from the subject I began to speak on. I feel that there are great business questions which have been forced on the public attention in recent years that demand the best thought and the best action of the organized business men of New England. We are passing through a period of vast changes. Electricity and steam have opened up new possibilities of industry, and we have new ideas to deal with, to meet the new conditions. The tendency of recent times to the consolidation of corporations and trades, controlling large amounts of invested capital, and great power for good or for evil, raise, also, another class of questions. The greatest public and business organization can be of wide reaching public service in many cases, by bringing the pressure of the force of business to bear on managers of such corporations to keep them moving along a liberal line of policy.

If you will allow me to make a brief reference to one of the corporate organizations, and its relations to the public, I will speak of the Union Station, (Good, Good, and applause), which has so recently been presented to our people. It seems to present a further illustration of the power of these great masters of capital united in great corporations for good if they are managed with due regard to public interest and in a liberal and progressive way. I for one deem it a fortunate thing for Massachusetts and for New England, so far as we can judge up to the present time, that some of our railroad systems have been aggregated together in one corporation, although that be a corporation, although it bear a name outside of this Commonwealth; and we can see that the union of interest offers great opportunities to the public. We want to keep extending the pressure of public opinion, and business men like you can be of use in impressing that opinion upon the managers of these great corporations, for they owe a great duty to the public, to assert that they should be managed with the greatest wisdom, for they owe duties to the community, and if we can secure their management upon those lines, then, Mr. President, I feel from our economic standpoint these aggregated corporations which are such a striking feature of the present day, have in them great opportunities. The transportation in all its phases is one that peculiarly demands the interest and the attention of the business men, and I have profited very greatly by consultation with progressive business men already.

Mr. President, in conclusion allow me to present to you, tonight my best wishes for your future usefulness, not only of this organization, but its consideration of these great public questions which such business men, by their training, are better fitted to pass upon than most other men of the community.

At the conclusion of this speech, the president announced that the exercises of the evening were over. It was then just ten o'clock, which hour was an indication that the Bostonians know how to conclude a banquet, even of the most entertaining character, at a reasonable hour. A short time was spent in social converse, and farewells, and each visitor left feeling that the old-fashioned and trite sentiment, "It was good to have been there," was fully realized in his case.

Annual Meeting New York Hardware Club.

The annual meeting of the New York Hardware Club was held at 12:30 on Saturday, March 21, 1896. President McCartee called the meeting to order, and in a few brief and well-chosen words congratulated the Club on the great success in a social, gastronomic and financial respect, which it had scored during the past year. The report of the secretary was made by E. C. Van Glahn, secretary pro tem.. showing that while the membership in March, 1895, had been 562, of which 471 were resident and 91 non-resident members, the number recorded March, 1896, was 643, of whom 536 were resident members and 107 non-resident.

Treasurer Keating presented his report, which showed that the Club was in an admirable financial condition, and that, in fact, it was practically free from any indebtedness whatever, as the last of the bonds issued for furnishing the rooms have been retired or are already under call.

The annual election for five governors to take the place of those whose terms expire in 1896 was next in order. The president appointed as tellers Edward P. Stoughton and W. W. Glover. The nominating committee then presented their report, which was a recommendation that the five governors whose terms had expired should be elected as their own successors. The names of these gentlemen are as follows:

Peter McCartee.
George H. Sargent.
Arthur G. Sherman.
Robert H. Swayze.
Edward C. Van Glahn.

The polls were then declared open, and so remained for one hour, at the end of which time these gentlemen were declared to be the unanimous choice of the Club.

The following gentlemen have been unanimously elected to the Club since our last report:

Joseph P. Schiller, No. 15 Laight Street.
John M. Young, No. 37 Murray Street.
C. F. Smith, Indianapolis, Ind.
J. M. Whitman, Pulitzer Building.
H. H. Desmond, No. 14 Vesey Street.
John J. Jennings, Bristol, Conn.
Chas. W. Hubbard, Jr., No. 253 Broadway.
John T. Pierson, No. 178 Broadway.
Geo. B. Jenkinson, 2d, Newark, N. J.

The Erie Specialty Co., Erie, Pa., manufacturers of Hardware and advertising specialties, have sent out their 1896 catalogue. The company say: "We herewith present our catalogue for 1896. Several new articles have been added and old ones improved, including the Hardware specialties formerly manufactured by the American Wringer Co. Our goods are now recognized as the standard in this line. The demand for them is rapidly increasing in this and foreign countries, owing to their special qualifications for the work designed. We are pleased to announce that we are now located in our new plant, which we have designed and equipped with new and special machinery for the manufacture of our goods, and, with our enlarged capacity, hope to better serve our patrons." The articles illustrated include cork pullers and screws, lemon squeezers, shavers for mixing drinks, ice shavers, cigar cutters, advertising plates, cigar box openers, plug tobacco lifters, tobacco cutters, cigar cutters and lighters combined, etc. The goods are numbered for convenience in ordering.

SECOND ANNUAL SPORTSMEN'S EXPOSITION.

The Second Annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, was opened with a snow shovel on Monday, March 16. Col. Waring's white-robed angels made a concentrated attack on the snow in the vicinity of the Garden before those who had left their snow shoes at home could make an entrance. Inside, the stuffed Tammany tiger, in one of the taxidermists' collections, grinned a satisfied grin as he wondered if Tammany wouldn't do a thing to them when the Governor signed the Raines bill. The Garden, as is usually the case, was decked out in flags and banners of all nations, and the galleries and pillars draped with red, white and blue bunting, aided by the electrical displays. A most attractive scene was the result. The attendance at all times was large and the show has been a financial success. In all probability the feature that attracted the most widespread interest were experiments with the latest scientific discovery, X-ray photography. During the week a number of photographs were taken. A lead pencil, screw-driver and a nail were laid on a strip of hard black rubber, 1-16 of an inch thick, which was laid on the plate holder above a sensitive film. This was put directly under a tube, about three inches from the bulb, and a current of 35,000 volts turned on, the rays created by the current passing through the rubber, after an exposure of about ten minutes imprinted the shape of the articles on the film. Clear pictures of the bones of the hand were obtained in a like manner.

The loan exhibition proved an attractive department, containing as it did Lieutenant Peary's collection or Northern curi. s, including a kayak or skin canoe used by the Eskimo, an Eskimo gun, two walrus heads, trophies of sport in Whale Sound, Greenland; narwhal skull and tooth from the same region; complete Eskimo fur costumes worn by Peary during his trip north; a set of Eskimo weapons used by Peary in harpooning walrus, and two musk ox skins. The loan exhibit also included many cups, medals and trophies won by the various colleges and athletic clubs, as well as the silver cups won by the Vigilant and Niagara. The cups of the N. A. A. O. were also shown.

A full-rigged duplicate of the little half-rater Ethelwin that so gallantly defended the cup against the Spruce the IV, was shown by A. G. Spalding, in connection with several handsome canoes, yacht tender, row boats, etc., the production of the St. Lawrence River Boat Co.

The powder mill which formed a part of the Hazard Powder Co.'s exhibit attracted great attention. The huge wheels that mix the ingredients were made of wood, though few could detect the deception. The wheels used at the company's mill weigh seven tons each.

The skin tepee of the Blackfoot indian chief Bear Chief, was at all times the centre for admiring crowds. The women busied themselves in sewing moccasins and the children tried their best to amuse themselves, getting genuine enjoyment out of pieces of stone.

The Dalmler horseless carriage was gazed at by many, who were doubtless preparing themselves for the sight of many of these novel vehicles, running swiftly along our streets. The same company also showed a beautiful thirty foot launch and a cedar skiff propelled by motors. The tandem bicycle boat was certainly an aquatic novelty.

Smith & Wesson made a genuine innovation by maintaining a shooting gallery, where any who so desired could try the accuracy of the celebrated arm free of charge. They also displayed, in a glass case, samples of their specially finished revolvers.

The Maine camp, the headquarters of "Fly Rod" (Miss Crosby), showed some magnificent specimens of mounted moose heads, some having a tremendous spread of horns. In connection with this exhibit were seen glass tanks containing brook trout and landlocked salmon, sent by the U. S. Fish Commission.

The Laflin & Rand Powder Co. showed a complete working model of their works at Wayne, N. J., in a glass case. A bird's-eye view was thus obtained of each building with the roof uncovered, which showed the machinery in motion.

A prominent New York furrier exhibited in a log cabin. Extra interest was added by having several live animals displayed, two foxes, a red and gray, being chained to the roof. A cosy log fire was burning inside and samples of furs were shown in different ways. The most striking feature of the display made by Schoverling, Daly & Gales was about twenty-five Chas. Daly guns which had been specially prepared for the exposition. The prices of these guns ranged from $100 to $400. The barrels were made of the new Krupp special steel, which is very strong. They also showed Walsrode smokeless powder, Wright & Ditson's tennis rackets, and Horton steel fishing rods, for all of which the company are agents. The collection of sporting cutlery, revolvers and bicycle sundries was very fine.

One of the most interesting parts of their exhibit was the immense elk head which they have had in their store for a number of years. This head is said to be one of the finest in the world, the antlers measuring 6 feet 4 inches and 6 feet 3 inches. It is the head of an animal shot on the Laramie plains some ten years ago, and was purchased by them in Denver from Carlos Gove, the celebrated rifle shot and pioneer.

The feature of the display made by the U. S. Net & Twine Co. was the Kosmic brand of fishing tackle, which included rods, reels, lines, and other implements used by anglers. The specialties in rods were one gold mounted rod, valued at $500; two sterling silver rods at $200 each; also two fly rods made for D. A. Heald, president of the Home Insurance Co. The lightest of these weighed 1¼ ounces, the other 2⅛ ounces. They are the lightest rods of which there is any record. Both are entirely practical, and can be fished with as well as a rod of heavier weight. There was also a rod made of six joints for carrying in the pocket.

The automatic magazine target trap shown by the Cleveland Target Co., attracted the attention of shooters. It is fitted with a saddle chain and pedals, and is worked in a similar manner to a bicycle.

The punching bags attached to the exhibit of the Overman Wheel Co. were a source of irresistible attraction for the sluggers in embryo. They were continually on the move, and many a cross counter did they get in on the unwary punchers, much to the edification of the onlookers, and the satisfaction of their more modest brethren who did not essay to show off in public.

The Remington Arms Co. showed in glass cases, arranged at the back of the space, a variety of hammer and hammerless guns and target and hunting rifles. On a table were arranged the parts of Remington arms, including rifle and revolver mechanism.

The two rapid fire guns at the stand of the Union Metallic Cartridge Co. seemed to have a fascination for many. One was a three-pound Hotchkiss, the other a one-pound Driggs. A three-inch steel plate, riddled, near at hand, gave silent testimony of the power of these samples of modern ordnance.

Digitized by Google

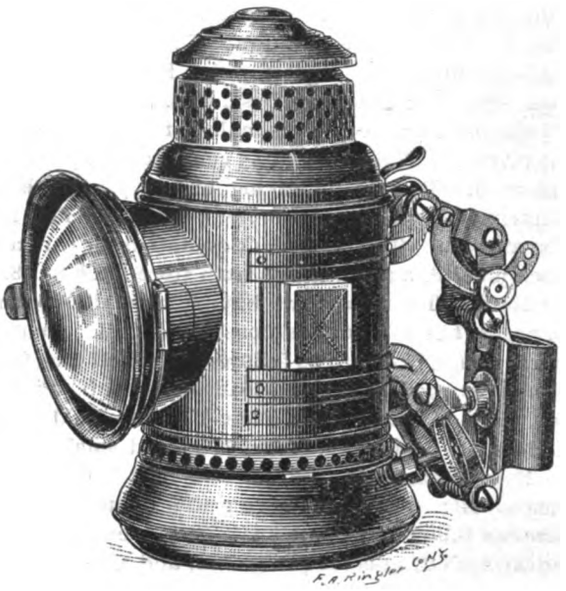
A distinctive feature of the Winchester Repeating Arms Co.'s show was a glass case containing a 22 caliber repeating rifle and a repeating shot gun, mounted on mechanism with electric motor, which operates the arm, putting them through the operation of loading, firing and ejecting old shells. Two handsome glass cases, which contained pyramids formed of shells, cartridges and bullets, occupied prominent places in this exhibit.

The sharpshooters who performed on the stage during the week accomplished many apparently impossible feats with their deadly rifles. Swinging glass balls were broken with unerring accuracy, the rifles being held in many different postures. The most striking part of this novel entertainment, and one which evoked rounds of applause, were the musical selections that were shot out of xylophone targets, composed of strips of steel. "Sweet Marie," "Home Sweet Home" and other tunes were played.

At the stand of a fishing tackle concern a lady tied trout flies from bright colored feathers, making a fly called the Jenny Lind. These were presented to the bystanders, much to their delight.

Everywhere was the best of feeling shown, visitors being invited to handle, inspect and examine the articles on exhibition to their heart's content, and in but few places was the sign "hands off" displayed.

The following named constituted the committee of patrons and exhibitors of the prize and trophy loan exhibit: Hon. Grover Cleveland, Herman Oelrichs, George Gould, Howard Gould, R. Spalding de Carmendia, Rev. W. S. Rainsford, George Work, James L. Kernochan, Hugh H. Janeway, Walter Camp, Henry Whiting Garfield, Richard Stevens, N. Sperling, Bartow S. Weeks, Fred. R. Fortmeyer, Charles Tatham, Clarence Hobart, H. E. Buermeyer, John B. Day, William B. Curtis, F. Brinkerhoff Thorne, Philip King, Daniel Chauncey, George D. Phillips, Robert Bonner, Horatio Nelson, Col. Lawrence Kipp, Frank W. Sanger, C. Oliver Iselin, Theo. A. Havemeyer, D. O. Mills, James Whitely, Valentine G. Hall, H. O. Talmadge, John M. Ward, Hon. H. A. Gildersleeve, L. T. Duryea, Edgar Murphy, L. S. Thompson, J. Gould Brokaw, Charles C. Hughes, R. E. Peary, U. S. N.; Orville Oddie, Jr.; Samuel W. Fairchild, Gov. John W. Griggs, Gus Zimmerman, Harry Cornish, Frank de Haas Robinson, George G. Tyson, Hon. C. H. Ebbets, J. E. Sullivan, John B. Yates, J. Otto Donner, Howard H. McLean, Wm. E. Carlin, Wm. H. Ford, Benj. G. Fairchild, J. J. Elliott, J. Pierpont Morgan, J. Herbert Ballantine, Bernhard Gilpin, Jr., and Robt. D. Wrenn.



New England Hardware Dealers Association.

The monthly meeting of the New England Hardware Dealers' Association was held on Wednesday evening, March 11, at the Castle Square Hotel, Boston. The meeting was well attended. Ex-president Samuel H. Thompson, of Lowell, offered fitting resolutions on the death of the late Governor of Massachusetts. The following committees were elected: Pricing committee, composed of the following gentlemen: A. M. Gardner, H. M. Saunders, S. D. Balkam, M. A. Chandler, and H. G. Janvrin. Investigating Committee composed of George W. Burditt, Thos. D. Baldwin and Charles D. Darling. After business was disposed of the company sat down to a banquet, and were afterwards addressed by Webster R. Walkley, of the Peck, Stow & Wilcox Co.; Major N. W. Perkins, of New Haven, Conn., and others.

F. E. Kohler & Co., Canton, Ohio, Syracuse Specialty Mfg. Co., Syracuse, N. Y., and Gibbs Mfg. Co., Canton, Ohio, have by mutual arrangement advanced and established uniform prices on the 9th inst. on all metal head lawn rakes manufactured by them, all former quotations being withdrawn.

A "Happy Thought" for Wheelmen.

The Bicycle Lamp here illustrated is the "Happy Thought" being successfully manufactured by the Hitchcock Lamp Co., Watertown, N. Y., for whom Surpless, Dunn & Alder, No. 15 Murray Street, New York, are general agents. The points advanced by the makers in its favor are that it has a patent adjustable hanger, that adds greatly to its efficiency; that it burns any kind of illuminating oil, and will burn for ten hours with one filling, throwing the light a distance of fifty feet. They also state that it cannot be jarred out, and in further explanation say: "The wick raiser when properly adjusted is so constructed that the wick cannot jar up and down, and the

double system of drafts keeps the lamp exceedingly cool and furnishes the flame with extra oxygen, which helps to produce a bright square-topped flame. The lamp is also constructed so that the top and bottom can be quickly detached from the body of the lamp, and all parts easily cleaned. We also have a ground lens and the reflector is accurately adjusted to the same." Further information as to prices, etc., will be sent if desired. A full presentation of the merits of this article may be found upon page 49 of this issue.

National Saw Co.'s Announcement.

The National Saw Co., Newark, N. J., make the following announcement to the Hardware trade: "For years it has been the aim of saw manufacturers to produce a cross-cut saw which would retain the same thickness on tooth from the end of saw, no matter how much the saw is filed down by sharpening. Some manufacturers have partially succeeded in producing such a saw. The National Saw Co. take pleasure in announcing to the trade, and are positive in our assertion, that, after two years of steady experimenting, we have at last solved the problem; at a great expense we have perfected machinery for grinding to attain the above result. However, not satisfied with a perfect ground saw only, we have also accomplished the manufacture of a perfect quality of steel, and we claim to have attained the highest standard of superiority in our new Hercules Steel. An important feature in our new saw is that with our new process grinding it leaves the saw so stiff no matter how much it is filed one man can use the same and work it with ease. Our improved method of grinding (the machinery of which we are sole owners and patentees), together with our extra quality of steel, enables us to claim to be able to produce the only perfect cross-cut saw made at this time. They will be known by the following brands: 'Our New Model, Up to Date, Champion—XXX Thin Back, 6 gauges—XX Thin Back, 3 gauges;' 'This saw is made of our superior Hercules Steel, and is fully warranted.'"

Review of the Markets.

Hardware: There are a variety of opinions as to the condition of the market. Some go so far as to say "that trade has the grip," while others characterize it as fair. The consensus of opinion is that business is dull. The recent heavy snowstorm is by many held responsible for this undesirable feature. What business there is, may be said to be fluctuating. One day it may be good, the next bad. Advice from traveling men bears out the above statement. Orders are largely by mail. Money seems scarce, consequently collections are not as desired.

Wire Nails: The demand for Wire Nails during the week past has been but fair, though some think that it shows a slight improvement over the previous week. Prices are the same. We quote as follows: Carload lots or mixed carloads, $2.40 per keg base, f. o. b., Pittsburg; less than carload lots, $2.50 per keg base, f. o. b, Pittsburg. On direct shipments on contracts in less than carload lots of 24,000 pounds of Nails an extra 5 cents per 100 pounds will be charged. To jobbers taking of one mill within one calendar month 500 kegs or more, 5 cents per keg rebate will be allowed. The New York quotation for carload lots on dock is $2.58, and small lots from store fetch $2.68.

Cut Nails: The trade are buying carefully to supply their needs, but business is considered dull. Quotations stand unchanged and are as follows: Carload lots, f. o. b., Pittsburg, $2.15; less than carload lots, f. o. b., Pittsburg, $2.25. Carload lots on dock, New York, are held at $2.33; small lots on dock, New York, $2.43, and small lots from store, New York, $2.45.

Linseed Oil: The New York prices quoted on Linseed Oil are as follows: American raw, 41 cents per gallon; American boiled, 44 cents per gallon, and Calcutta raw, 52 cents per gallon.

White Lead, Red Lead and Litharge: The quotations made by the National Lead Co. continue unchanged. We quote as follows: White Lead, dry or in oil, Red Lead and Litharge in kegs, in lots of less than 500 pounds, 5¾c. net; in lots of 500 pounds and over, 5¼c.; Red Lead and Litharge in barrels and half barrels, ¼c. per pound less than price in kegs.

Putty: For the finer grades the nominal quotations are $1.40@$2.25, as to style of package and quantity.

Window Glass: The following are the quotations on Glass: French, 70@70&5 per cent.; domestic, 75&10 per cent. off.

Auger Bits: The Irwin Auger Bit Co., Wilmington, Ohio, quote a discount of 50 per cent. on their bits.

E. C. Atkins & Co., Indianapolis, Ind., issue the followind discount sheet in connection with their January, 1896, catalogue. The terms are 30 days f. o. b. factory:

Clapp & Co., bankers and brokers, New York, in their weekly trade letter say: "The commercial year practically opens with the swelling buds and closes when the ripened fruit commences to decay. Man and nature have then cleared away all debris, and are ready to make a new record. Financial progress regularly keeps step with the returning seasons. When the buds and bonnets begin to nod to the blue sky in the golden spring sunshine you can rejoice in the blue expanse and golden edges of our elegant annual Souvenir Book. The convention to nominate a president to take office March 4, 1897, will take place in June. Delegates are being chosen, preliminary State conventions are being held, platform planks of leading parties are under discussion. In 1861 our money circulation per capita was $14.06, in 1871 it was $18.75, in 1881 it was $27.41, in 1891 it was $34.41. Africa's first large gold production was in 1887, the output being 28,754 ounces. In 1895 her output was 2,119,023 ounces. Total to 1896, about 8,358,465 ounces, worth $172,784,536. In 1886, Australia produced 1,257,670 ounces; last year 2,212,600 ounces. In 1886 Russia produced 922,226 ounces, last year, 1,250,000 ounces. In 1886 the United States production was 1,693,125 ounces; in 1895 2,273,580 ounces, leading all other producers. All other countries in 1886 produced 1,171,342 ounces; in 1895 1,798,000 ounces; equaling a total production in 1895 of 9,653,203 ounces, against but 5,044,363 ounces ten years ago."

THE PHILADELPHIA TRADE.

While the air has been hot with war and rumors of war in Cuban waters, winter has given us a parting embrace of more than usual fervor, and we have seen more snow in the last week than at any time during the entire winter.

Impassable roads do not conduce to active business, and yet there is a fair amount of business doing, while the market is evidently altogether in a waiting mood.

The winter has been so uniformly cold, although until now free from snow, that vegetation has been greatly retarded, and agriculturalists already begin to talk of good fruit crops, as so far there has been no danger from frost, vegetation being so backward that the frost had no effect. We hope, therefore, that warmer weather will come all at once and that spring trade will make an active response.

Certainly, seasonable goods have not, as yet, received their due of attention, and a sharp demand is looked for when the weather improves. Prices are uneventful, although many manufacturers appear envious of the success of the Nail men and are anxious to follow in their wake in a path which may lead to glory, if not to profit. Strap and T Hinges and Common Carriage Bolts are already so affected, and Dame Rumor suggests other lines, which are regular, to be advanced in the same way.

Collections are slow—there is no denying the fact—and the Bicycle business is evidently absorbing a large share of the money of the country. There seems, however, to be no waning of the craze; on the contrary, it appears to be, if anything, on the increase, and next summer promises to be the wheeling year par excellence. Meanwhile it is interesting to hear the discussions as to the relative methods of "high grade" wheels. One neighboring firm has a wheel in their window marked "absolutely high grade" at a price somewhat under $50, and as the $100-men have until now been monopolizing the words "high grade," it is rather curious to see how little these words mean. We understand there are some four hundred different lines of

Digitized by Google

bicycles on the market, each of which claims to be the best, so the customer who cannot be satisfied out of four hundred "best" machines, is certainly a very hard one to please. There is no doubt that bicycles belong to the Hardware trade, and we are glad to give *Hardware* its meed of praise for having been among the first to call this to the attention of the Hardware trade. BIDDLE HARDWARE CO.

THE CLEVELAND TRADE.

Continued stormy weather has tended to retard the opening of spring business. Notwithstanding this fact, however, the volume is quite satisfactory, and we have the consolation of knowing that the storms and snow fall which are so uncomfortable for human beings, are really just what is required for the agricultural section.

This section suffered from the lack of sufficient crops in 1895, and it will require a prosperous crop season in 1896 to set them on their feet.

There are no items of particular interest to report. Values remain about the same as at the date of our last letter. The movement of bicycles still continues, and every indication points to a great rush immediately after the opening of the spring weather.

MCINTOSH-HUNTINGTON CO.

THE ST. PAUL TRADE.

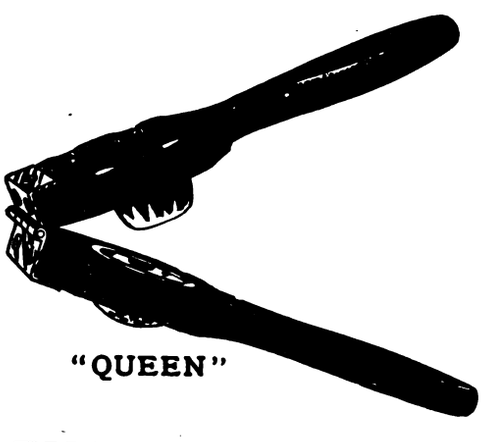
Since our last letter we have enjoyed a very good amount of business in all lines; possibly we might brag more on the amount of bicycles we have been selling than on any other article.

Our weather has been very favorable, and seems to point towards an early spring. In this frozen north an early spring is a desirable thing. If our farmers can get their wheat into the ground by the middle of April, they are assured of safety against frost.

In some years, especially in the northern part of Minnesota and North Dakota, the wheat has been sown rather late, and frost came in the fall before it was ripe, and the result was frozen wheat, worth almost nothing.

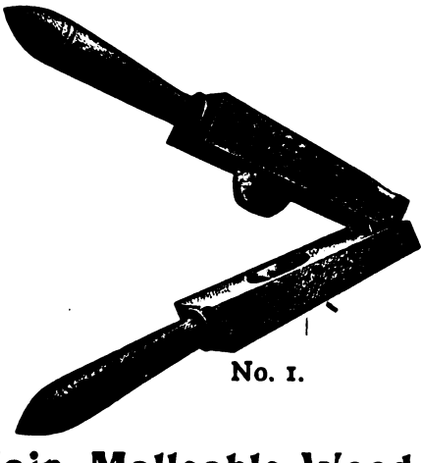
We know no reason why we should not have a good spring trade, as there is no doubt 40 per cent. of last year's crop unsold, but the prices are so low that the farmer has held on, in hopes of a higher price. We believe that the amount of money realized from the crop last fall will be more than usually realized out of a crop. All together, there cannot possibly be any rush of business.

The trade in Barbed Wire and Nails has been fairly large; not quite as many carloads have been sold as other years, we believe, for the reason of the high price on the nails.



The small dealer thinks there will be a great decline in the near future, and as he does not need nails until April, or possibly May, he will put his buying off until he positively needs them.

The sales of painted wire cloth have been made early in the season, because of the extremely low price, and with this have gone Spring Hinges and Screen Doors. All together, there has not been as many future orders taken as usual up to the present time.



C. W. HACKETT HARDWARE CO.

THE DAVENPORT TRADE.

A Wire Nail company desired to quote us price. We replied that it would give us pleasure. The quotation came to-day as follows: "Our price is $2.67, car lots, freight allowed" (of course, we understand there is 50 cents per keg added to this price for air), and then apologizingly the letter continues. We ask you to buy on the principle of the man who charged Bill Nye $3 for a sandwich. Bill asked why such a price, and the man replied, "Well, dumb it, I need the money." This seems very frank indeed. We think, however, that William had the advantage of the nail buyer, for the sandwich manufacturer did not ask $3 and then insist upon taking $3.50, or 50 cents more than he had

quoted, and the sandwich manufacturer did not keep Mr. Nye waiting for six months for 10 cents of the change that was coming to him, or refuse to ever give it to him if he should buy sandwiches from the "other feller" at a less price.

Notwithstanding the exorbitantly high price of Wire Nails, it is intimated there will be another advance of 10 cents per keg April 1st. Price of Screws has again been turned down and market is demoralized; Hinges are swinging higher, Carriage Bolts are lower, Cotton Fuse has advanced, price of Linseed Oil has been crushed down to 36 cents for raw and 38 cents for boiled, and dealers are taking it in lively, anticipating an advance. The price of Barb Wire is too low and is selling freely.

General Hardware trade is better than a year ago, with collections only fair. SICKELS, PRESTON & NUTTING CO.

THE COLUMBUS TRADE.

This week started out with snow, and it looks as though it was going to keep it up all week. "Durn" the ground hog anyway. He is at the bottom of the whole business. He had better stayed in his "hole" the "whole" of February. Of course he had to go back in his "hole;" and surely it was a hog "hole," and he was a "whole" hog. If I don't forget it next February, I am going to get a man to stand by the "hole," and as soon as the hog sticks his "whole" head out of the "hole," knock a "hole" in him; and that will settle the hog. Some kinds of ground hog have a bad effect on people at night after eating too much, but the kind I refer to affects your nerves in the day-time, when you are wide-awake. Trade is going to pan out as well for the first three months in '96 as in '95 if it keeps up at the present rate the rest of the month. Collections have not improved much yet, and will not until the weather settles so work can be resumed. Farmers are complaining that the wheat is killed, but they always talk that way until harvest time. There is no denying the fact that it does look badly now, but when the blanket of snow is removed it may look better. The season will be later than '95, but it is to be hoped that our bad weather will come now and not later. SMITH BROS. HARDWARE CO.

THE PITTSBURG TRADE.

The severe weather of early March has been quite a drawback to trade, and it is not up to the expectations earlier in the year. Collections are quite slow, and failures among retailers more frequent than we like.

Yet, with it all, a fair volume of business is doing and better weather will improve matters wonderfully.

Pittsburg is now interested in the visit of the Congressional River and Harbor Committee to inspect the Monongahela and Ohio rivers.

The immense coal fields on the upper Monongahela are as yet only touched, and their natural outlet to market is by these rivers. The Monongahela is improved by locks and dams as far as Morgantown, W. Va., and the improvement from Pittsburg to the West Virginia State line is owned by a private corporation. The effort is to have the government buy out this company, improve the upper river and the Ohio by locks and dams so that coal may be moved all through the year.

The Ohio River and Lake Erie Canal is also a part of the scheme of our improved waterways. This has been lately surveyed and shown to be quite practical, and can be built for about thirty million dollars.

By it Lake Superior iron ore could be laid down at our furnaces without breaking bulk, and boats returned loaded with coal or other Pittsburg products.

Few people have knowledge of the immense tonnage of our rivers, and this visit of the Committee is expected to afford them ocular demonstration of it.

LOGAN-GREGG HARDWARE CO.

The '96 WISCONSIN.--Price, $100.

Points of Excellence.

THE Heart of a Bicycle is the Cones and Cups. We have a new process for making ours, which makes them absolutely indestructible. Turned from highest grade tool steel, they are carefully tempered and drawn to a straw color, then highly polished. This insures light-running qualities. Our finish is high grade—the best Jet Black Enamel, and baked on right; heavy nickel plating on copper; Barrel Hubs with spokes set in flanges; Barrel Crank Hanger; large balls; tools that are made for use and not to look at; Handle Bars can be adjusted to any position while riding; Cork Grips, tipped with black; the new Quick Repair M. & W. Tires; new Fork Crown, handsomely nickeled. The Wisconsin has so many new features for '96 that it will hardly be recognized by its many friends. It was a favorite last season. It will be a leader this year. Only one agency in a town. Make your application now. Don't wait. A guarantee with each wheel. If you doubt our statement about Cones and Cups, send for sample and be convinced. . . . . .

THE TOLDOE TRADE.

In reviewing the trade and business for last January, February and March, up to the present time, we feel very well satisfied. That which has been done shows more business than for the same time in 1895. Prices are fairly well maintained, and although some manufacturers are making special inducements to induce the jobber and dealers to purchase goods; still, we find that most of the lines are stiffening. Some few lines have had considerable of an advance, such as Carriage Bolts and a few other articles. Galvanized Iron and Sheet Iron have also slightly advanced, and no doubt that as soon as we get good warm weather, and the warm rays of the sun melt the snow and ice, trade will be very satisfactory, although we do not anticipate any extra large business, this being a presidential year; still we think that stocks in the retail dealers' hands are not too large.

Collections we find are good in some localities while in others they are very poor. Taking it as a whole, we do not think collections are as good as a year ago.

We find that we are obliged to carry a good many more people than formerly, in fact the dealers that used to discount their bills are becoming very scarce, and are not only taking the full limit of sixty days, but even asking beyond that time. We think that the tightness of the money market, and the high rate of interest that the banks are asking, is doing more to retard business than anything we know of, as everybody is trying to be very conservative, in fact we think a little over-conservative.

It is really to be deplored that the mercantile business of our country has to depend so much on the whims of the bankers, and no doubt, as soon as our moneyed institutions will let go of their hoardings, we can depend on a better business. No doubt the silver agitation is making bankers hoard the money that ought to be in circulation, but we "live in hope" for the better.

STOLLBERG & CLAPP CO.

THE BALTIMORE TRADE.

It would be folly to expect any great amount of business with weather conditions—such as we have experienced during the past fortnight—so unfavorable. Snow, sleet, slush, rain, an elemental medley delightful to the lover of variety, but doleful enough to the poor country merchant. Nor were "the winds tempered to the shorn lamb," for that sagacious animal still retains his wool and Mr. Merchant, looking at his unsold stock of Sheep Shears, vows vengance

HARDWARE DEALERS

Who handle Bicycles should examine the

VICTOR

We use pounds of crucible steel where other makers use ounces. The Victor hollow crank axle will at once commend itself to mechanics.

Our '96 Victor comes nearer to perfection than any wheel ever made.

W. W. Lawrence & Co.

PITTSBURGH AND BUFFALO

This name on a Keg of White Lead, a can of Paint, Color Stain, Putty or Varnish means that the material in the package so marked is the very best of the kind made. WHEN YOU BUY, be careful to ask for THE LAWRENCE BRAND and take no other, even if it is said to be "just as good." In this way you will always be sure of getting

THE VERY BEST.

on the soft-tongued stranger who beguiled him into such an investment.

But, Mr. Merchant, you have no cause to despair. If shearing time passes without disposing of your stock, think what a monopoly you will enjoy when the Government Popular Loan will create a demand for Coupon Clippers. To the pioneer belong the spoils!

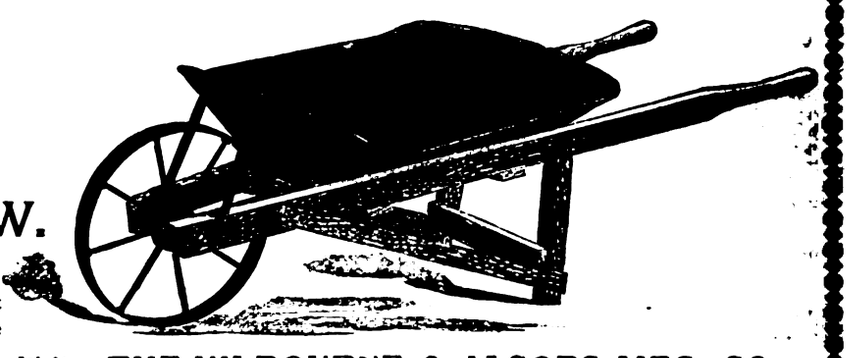
While trade adjacent and tributary to this market has received a set back from causes named above, business in the Carolinas and South has been very satisfactory. Few large orders, but so many small ones that the "balance of trade" is decidedly in favor of 1896.

Tempus fugit roughly translated means fly time. In this connection I would mention that Screen orders are coming in quite rapidly—a good business may be expected in this line. (Fenton, Mich., papers please copy.)

Apropos! Speaking of Fast Flyers our Bicycle manager assures me that he is meeting with good results in this department. A local cycle show is now in progress here, and has created a healthy rivalry that bids fair to do good to a good cause.

Collections! well—the least said about that the better.

TABB & JENKINS HARDWARE CO.



THE OMAHA TRADE.

Trade hangs along very closely in the same old notch, the weather for a short time past having been unfavorable for an increase. Prospects, however, are favorable for something of an increase in Spring trade, as the snows of the past few weeks have put both farmers and merchants in a better state of mind, and all reports indicate that the ground was never in a more favorable condition for seeding than now. Prices are fairly well maintained, some season goods, as usual, being demoralized, but to no greater extent than is customary at this time of year. The Nail market is holding its own with an unexpected amount of firmness, but Barb Wire is a little weak, and an unsettled feeling prevails.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Angola, Ind.—The National Annunciator Co., with a capital stock of $10,000, incorporated. The company propose to manufacture an electrical train annunciator.

Atlanta, Ga.—The American Tool & Machine Co., incorporated; to manufacture all kinds of machinery, etc. Capital stock, $100,000.

Buffalo, N. Y.—The Spaulding Machine Screw Co., incorporated by Hudson Hoagland and Thomas H. Spaulding, of New York City; W. H. Crosby, of Buffalo; G. W. M. Reed, of Hartford, Conn., and C. A. Pugsley, of Peekskill. Capital stock, $300,000.

De Soto, Cal.—The De Soto Agricultural Mfg. Co., incorporated by John Carry, Henry Lapp and George Mahn. Capital stock, $30,000.

Erie, Pa.—The Beacon Mfg. Co., incorporated by Samuel E. Bacon, John Oliver, Frank W. Bacon and others; to manufacture tools, machinery, etc.

Hartford, Conn.—The Whitney Mfg. Co., organized for the purpose of making all kinds of machine tools, implements, etc. The company will soon begin work, having hired accommodations for the present in Colt's Armory. The capital is $50,000. The subscribers to the capital are: Charles S. Whitney, Clarence E. Whitney and Arthur L. Shipman.

Ingleside, Ga.—The Atlanta Plow Works, with a capital stock of $20,000, will erect works at Ingleside, to employ 100 men.

Jersey City, N. J.—The Empire Self-Lighting Oil Lamp Co., organized with a capital stock of $200,000. The incorporators are: Henry M. Brigham, William H. Seidel, J. C. Lord, L. C. Hopkins and E. R. Allen, of Brooklyn; H. L. Fordham, New York, and W. E. Rocknagel, of Englewood.

Philadelphia, Pa.— The Imperial Metal Co., incorporated by David Sterns. Capital stock, $100,000.

Port Jervis, N. Y.—The Malvern & Gordon Co., incorporated by E. M. Gordon, H. H. Malvern, Anna A. Gordon and Katherine M. Malvern, of Port Jervis; to manufacture stoves, plows and castings. Capital stock, $50,000.

San Francisco, Cal.—The National Self-Locking Sash Fastener Co., incorporated. Directors: F. C. Immel, Frank Baronie, Gustave Newburger, Bernard Reiss and Jacob Bernhard. Capital stock, $100,000.

Changes and Removals.

Chattanooga, Tenn. — The old Chattanooga Agricultural Works at East End will be converted into a steel bolt mill, with a daily capacity of twenty to sixty tons. H. Clay Evans and others are interested.

Dalton, Ga.—The Cleveland Stove Works at Cleveland, Tenn., are contemplating the removal of plant to Dalton. Capital about $70,000, and employ about 75 hands.

Recent Fires.

Cherokee, Iowa.—The Cherokee Novelty Mfg. Co.'s plant burned to the ground recently. Total loss estimated at $4500; no insurance. The company manufactured the Favorite window screen and had just received two carloads of materials. The company employed fifty men and boys.

Indianapolis, Ind.—The E. C. Atkins Co., saw manufacturers, at Nos. 202 to 216 South Illinois Street, nearly one-half the plant destroyed by fire at a loss of $75,000; insured for $56,750.

Pittsburg, Pa.—Hubbard & Co.'s shovel works, Butler Street near Sharpsburg Bridge, destroyed by fire. Insured for $42,500.

Racine, Wis.—By the explosion of a gasoline tank in the engine department of the Racine Hardware Co.'s factory, at Racine Junction, recently, a fire was started that wiped out that part of the factory and caused a loss of $125,000. The insurance amounted to $37,000.

West Troy, N. Y.—Fire recently gutted the oil can factory run by the Columbia Novelty Co., at the corner of Nineteenth Street and Railroad Avenue. The loss is placed at $3000.

General.

Salt Lake City, Utah. — The Western Hardware Co., stockholders held a meeting recently and elected the following officers: Nathan Sears, president; Reed Smoot, vice-president; W. J. Bateman, secretary and treasurer. Additional capital to the amount of $10,000 has been put into the corporation.

Features of Japanese Swords.

B. S. Lyman has discoursed upon this subject before the Franklin Institute. The lecturer was introduced by F. Lynwood Garrison, Professor of Economic Geology and Metallurgy in the Institute. Mr. Lyman said that the Japanese smith carefully selected and tested his steel or iron; for, although the earliest swords were made of copper or bronze, only steel and iron have been used for many hundred years past. Preferably steel alone was used, but sometimes one-third, one-half, two-thirds, or even more iron was intimately united with the steel by welding bars together. The metal was generally Japanese, but in the last 300 years European metal has occasionally been used, and then sometimes marked as metal of the "Southern Barbarians." In the all-steel or "pure-make" style of forging, as distinguished from the "mixed make," several flat pieces of steel, amounting altogether to something over a quarter of the weight of the sword, are placed one on another, with an iron rod welded as a handle to the lowest one, and are heated in the fire. To prevent the conversion of the steel into soft iron by "burning," or oxidizing its carbon, and also to keep the surface of the metal free from iron oxide that would be injurious if hammered in, the steel is never heated without being previously covered carefully with a thin wash of refractory loam and sprinkled with straw ashes, an ingenious precaution that is unknown in Western countries. The metal, too, must be kept scrupulously clean and never touched with the hand, as the least sweat will hinder perfect welding and leave a flaw visible in the sword. The little pile of steel plates is hammered on the anvil into a single flat bar, 6 or 8 inches long, by a couple of inches wide, and perhaps ½-inch thick. The bar is then doubled over, end to end, heated again and hammered out to a bar of about the same size as before; then doubled again, reheated and hammered out once more; so on, until it has been folded and hammered out fifteen times. Then the iron handle is cut off. In that way three more such bars are made. The four bars are then welded upon one another into a somewhat larger, thicker bar, and this again is five times doubled over and hammered out to about the same dimensions. The object of all this folding and hammering out is, of course, to secure perfect homogenity, with a thoroughly fibrous structure. It is readily seen that an immense number of layers has been produced thereby. The first doubling gives 2, the second 4, and so on, 8, 16, 32, 64, 128 (or more than 125), over 250, 500, 1000, 2000, 4000, 8000, 16,000, and the fifteen over 32,000 layers. The four small bars together would have then over 125,000, and the five other foldings would give over 250,000, 500,000, 1,000,000, 2,000,000, and finally over 4,000,000 layers. The polished sword has, consequently, fine lines like the grain of wood, and they are called the sword's hide or skin; and are distinguished by names according to the form, such as straight-grain skin, broad-grain skin, pear skin (liked a halved pear), pine skin, ragged like pine bark. When iron is used along with the steel, there are several ways of combing the small bars to make the larger one.

When you begin handling bicycles

One of the important things for you to do is to find the pneumatic tire which has the most friends. When you have found it, stick to that tire. It will be well for you to know that more than sixty-five per cent. of the total tire business is done by Morgan & Wright, Chicago. They have a guarantee which guarantees. They know how to take care of their customers. You have often seen their trade-mark—

MORGAN & WRIGHT TIRES
ARE GOOD TIRES

The M. & W. quick-repair pamphlet is interestingly illustrated from life.

"TRENTON" CYCLOMETERS ARE THE BEST.

MADE OF ALUMINUM.

Light, Strong, and Accurate. Electrotypes supplied to the trade upon application.

TRENTON WATCH CO., Trenton, N. J.

Factory Production, 2000 per day.

Two-thirds size. TEN Thousand Miles, NOT ONE Thousand. **Price $1.50** The American Cyclometer, plain as A, B, C. Read at a glance; after you read it no guesswork. Does not get out of order if you run it backwards like some others on the market. Not a Dinky Toy with steel parts so small that the dampness will rust the mechanism and eat away the small pivots. Nor built just well enough to last three months, but built well enough to last at least five years. It goes on the right of fork so that you can put your lantern on the left, where they are usually made to go. AMERICAN CLOCK CO., 14-15 Tremont Row, Boston, Mass., U.S.A.

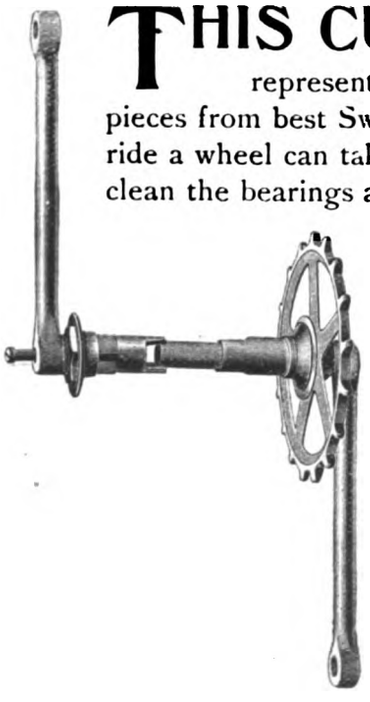
Digitized by Google

SINCE the **TINKHAM CARRIER** was first put on the market, several manufacturers in other lines of business have started in to make Carriers, but mostly with indifferent success. The manufacture of Carriers is a distinct and separate business from the manufacture of any other article, and the old saying, that it is impossible to carry water on both shoulders, applies just as much to the Carrier, as to any other business.



The Tinkam Cycle Co., is the only concern in the world that has a factory entirely devoted to the manufacturing of Carrier Tricycles.

It is impossible to use up old style or defective Bicycle parts, as there is no left-over material on hand that for some reason or another cannot be used in Bicycles.

In investing in a **TINKHAM CARRIER** you do not run any chances whatever. This Carrier has been thoroughly tested and **has not been found wanting.** It is used to-day by some of the largest corporations and firms in the United States and several unsolicited testimonials are part of our daily mail. A handsome catalogue will be mailed to you upon application.

The Tinkham Cycle Co.,

306-310 West 59th Street, NEW YORK.

PATENT PENDING.

THIS CUT

represents our **Telescopic Detachable Crank Shaft,** forged in two pieces from best Sweedish Steel. How do you like it? Any child old enough to ride a wheel can take it apart or put it together. In four minutes you can take it out, clean the bearings and put it together again without disturbing the adjustment of the bearings in the least. The balls cannot fall out, there are no Cotter pins to annoy and vex you, in fact you have no trouble of any kind with this crank. Nothing can be more simple—nothing more durable. Expert wheelmen pronounce it out of sight of any Crank now in use. Please remember you will find this Crank Shaft on every

Why Handle '95 Bicycles in '96?

MANY dealers and manufacturers, elated by a successful season in '95, have totally disregarded improvements. Even a casual observer can see that there are but few changes in the new models. An examination of

Remington Bicycles . .

will reveal more practical and exclusive improvements than are embodied in all other makes combined. . . . . .

Progressive agents, who recognize that the public will soon be clamoring for up-to date wheels, are rapidly arranging for Remington agencies in unoccupied territory. Handsomely Illustrated Catalogue, fully describing new models, mailed free.

It makes perfectly smooth ice cream with all milk. Cream added makes it somewhat richer, but not smoother. It makes very superior, smooth water ices, frozen fruits, frozen custards, sherbets, etc., and is a very simple, convenient and economical freezer.

No Gearing, cogs or fixings to get out of order.

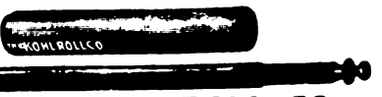
Noiseless in operation. A child can operate it. Makes a plate of ice cream in 30 seconds or a quart in 5 minutes. All other quick freezers merely SCRAPE it off a tin surface of some kind, but do not BEAT IT or WORK IT.

Our Freezer **Mixes, Mashes, Pulls, Grinds** and **Whips** the cream more in **30 seconds** than any paddle freezer does in **30 minutes.** Dealers will do well to investigate this promptly. Correspondence solicited.

Manufactured solely by **Polar Star Freezer Co.,**

Send for particulars and discount. 235 LEVANT ST., PHILADELPHIA, PA.

THE CHAMPION SIDE SASH LOCK



Has by its unequaled merits gained the public favor. It is a safe ventilator and prevents rattling. Is neat, cheap, simple and durable. It has been in extensive use for over eight years, and has become a staple article with the Hardware trade.

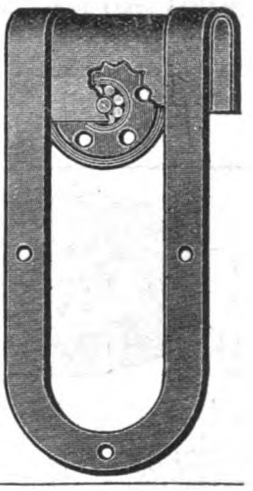
CRONK'S SOLID STEEL COVERED



CRONK'S ROLLER BEARING BARN DOOR HANGER.

THIS HANGER is made haavy, and as shown by cut, has roller bearing, same as high-priced tackle blocks; will run a door any distance, and we guarantee them to last a lifetime.

We have tested the rollers for one year with a weight of 3,000 pounds, running ten hours per day at 60 revolutions per minute without showing any wear.

Manufacturers of MEASURING TAPES, Etc.,

BRANCHES:
111 Madison Street, Chicago.
708 Locust Street, St. Louis.

127 FULTON STREET, NEW YORK.

The Home Steel Tape is intended to supersede woven tapes (metallic or linen) by reason of its incomparably greater accuracy and its very low price. The Home Tape has a red bent sewed leather case, with brass-lined mouth piece, with anti-friction roller. The foluing brass handle is practically flush. The steel line is ¼ inch wide, and sharply and plainly graduated. The graduations and figures are bright, while the ground surface is nearly black. It is to all appearances a First-Class Steel Tape, but it is not to be compared with our well-known Excelsior steel tapes. Woven tapes are used on account of their very low cost for many purposes for which a more reliable tape ought to be employed, like in the building trades, construction and railroad work, etc. The low priced Home Steel Tape will therefore be welcomed as meeting a frequent requirement.

HOME STEEL TAPES.—Feet divided to inches and 1-8 inches:

25 feet.—No. 80, $34.80 doz. 75 feet.—No. 83, $56 40 doz.
50 feet.—No. 81, $42.00 doz. 100 feet.—No 83, $72.00 doz.

We can furnish these tapes also with feet divided to 1-10 and 1-100.

WE GUARANTEE

A CIRCULATION FOR ALL THE NEWS HARDWARE HARDWARE EXCLUSIVELY OF NOT LESS THAN

ONE HUNDRED AND TWENTY THOUSAND

FOR

1896.

There is but one way, outside of the word of the publishers, to settle definitely the circulation of any newspaper, and that is to **publish the receipts from the post office** for the matter that is mailed. During 1896 we shall adopt this system, and will, each issue, publish the receipts for the preceding issue as obtained from the mailing department of the New York post office, and this will settle, once and for all, the truth of our assertions.

If it can be shown that we fall below 120,000 in the year we **will donate $1,000** to any charity named by the president of the New York Hardware Club.
